MATICO TILE FLOORING

MATICO's New Improved Install-It-Yourself System Makes It Easy!

1-Mark straight lines through the center of the room in both directions, using a chalk and line,

2-With a notched trawel, spread adhesive evenly over floor and allow to "set."

3-Press tiles into position. You can walk on MATICO as soon as floor is in place.

Yes, you can enjoy colorful, durable MATICO Asphalt Tile Flooring in your home at amazing low cost by installing MATICO yourself. You can't buy a more economical type of fuxury flooring than MATICO. It lasts for years . . . is easy to keep sparkling clean and comes in 32 striking decorator colors that can't wear off because colors and marbleization go clear through the tile.

It's a cinch to install, too, with MATICO's tested install-ityourself instruction booklet . . . tile calculator . . . and special

> tool kit. Why, you can finish a room in just a few hours.

Why put up with a dingy, worn-out floor when it costs so little to install a MATICO tile floor yourself.

See your classified telephone directory for the name of your MATICO dealer.

How Much Did You Learn?	294

ARE THESE MISTAKES HOLDING YOU BACK?

If you're not getting ahead as fast as you'd like, check these possible reasons. Find out why you're not a success and what you can do about it.

YES	NO	
		Do you put things off? To get anywhere you have to make a start.
		Do yea really want to succeed? Isn't there some- thing you want arough to work for it? Marriage, a new home, money for your family-all depend on your advancement.
		Are yes anwilling to give up temperary pleasures? Some people think more of a good time now than of promotion and higher pay later on.
		Are you too lazy to plan ahead? You've got to manage your life, plan for success and stick to it.
		Are you afraid of responsibility? In a bigger job you'll have to make decisions, act, be somebody.
		Are you short on courage? It takes grit and de- termination to set a course and stick to it.
		is your education limited? The good jobs go to men who know-men with sound training in their field. I. G. S. offers you that training.
		Do you think you can't afford specialized training? College may be too expensive, but home study lets you earn while you learn, at 1/10 the cost.
		Do you hesitate to find out where to get train- ing? If you shy off from taking the first step, you'll never achieve success.

One out of three who read this page and check their shortcomings will do something about it. Two will stay in the rut. One will plan for self-improvement and stay with it till he gets there. Are you the one?

I. C. S. has helped train nearly 6 million men and women for better jobs. Among its 391 courses there's one that can help you succeed. I. C. S. lessons are clear, direct, authoritative. They give you bedrock facts and theory with practical application.

3 FREE BOOKS—1. a 36 page pocketsize guide to advancement—a gold mine of tips on "how to Succeed". 2. Big catalog outlining opportunities in your field of interest. 3. Sample I.C.S. lesson text.

LOW-COST HEALTH PROTECTION

You can hardly see this TRANS-KLEER storm window—it's wanderfully transparent, yet it protects your loved ones from winter's frigid blasts. And each window rests only 39% costs each?

If your heart is set on a larger income and all that it means . . . better home—fine car—larger bank account—more of the good things of life. . . .

If that's your ambition and you are really serious about it, then you owe it to yourself to get the REAL FACTS about Accountancy, and the many good-pay opportunities that can be YOURS through LaSalle's famous Problem Method

plan.

It matters not whether you've had a single day of experience in this field—or whether you have already started but want to climb higher. LaSalle's expert training is designed to take you from where you are ... to where you want to be ... in higher positions and a lifetime career of security and good income.

WHY YOU CAN'T FAIL TO GAIN

You see on this page a panel of experts who know Accounting from A to Z... all the way from simple bookkeeping, on up through advanced accounting, cost accounting, auditing, income tax, and coaching for the C.P.A. degree. These are only part of LaSalle's instruction staff. But what is most important to you...

know how to impart their knowledge to others . . . how to help you prepare quickly yet thoroughly for success in this very lucrative field.

The proof? What stronger proof could there

be than more than 4,000 Certified Public Accountants (approximately 10% of the U.S. total) who have trained with LaSalie? Or the hundreds of thousands of men and women whom LaSalle has helped qualify rapidly for more money, a brighter future, in a highpay-lifetime career? These thousands came to us with different backgrounds of experience and varying degrees of ambition. Many have reported raises and promotions after only a few weeks of training. Thousands of them have written to say they are now earning 50 % more—even double their former incomes—often in less than a year. These letters are published in book form for your inspection. They were written by real people, with real income, problems and ambitions-people who might be your next-door neighbor.

Yes, if you are really sincere in wanting to better your position—start your income climbing—enjoy a lifetime career of high standing and high reward—this friendly staff

of experts can help you.

SAMPLE LESSON SENT FREE MAIL COUPON BELOW

ger pay. They can do the same for youl

You don't have to wonder what LaSalle's Accountancy plan is like. You will be sent a free sample lesson, which does not obligate you in any way. Study it—keep it—see for yourself how simple, clear, and easy it is to master. This is an actual lesson right out of the regular training—to show you exactly how LaSalle's Problem Method has trained more than 1,300,000 men and women from all walks of life.

Also . . . the 48-page book, "Accountancy, the Profession That Pays," gives all the latest facts about the new and growing opportunities in five different fields of profitable employment.

This can be an important day in your life. A coupon like the one below has started hundreds of thousands of men and women toward a bigger job, a larger income. It can do the same for you.

Teen-Age Road-e-o Winners

The thanks of the Jaycees and Teen-Age Road-e-o sponsors are due POPULAR SCIENCE MONTHLY for publishing that very fine article, "How They Pick America's Best Young Driver," in your August issue [p. 80]. Here is a picture of the five top winners.

In the front row, left to right, are Ronald Hendricks, Belton, S. C., second; Clement C. Wagner, Kansas City, Mo., first; Clay Gervais, Carmichael, Cahi, third. In the back row, left to right, are Alan R. Foster, Auburn, N. Y., fourth, and J. Robert Austin, Burlington, Vt., fifth.

> MIKE CUSACK. National Tecn-Age Road-e-o, Tulsa, Okla.

Retractable Island Was Sunk

I seem to remember that the giant aircraft carner Forrestal was supposed to have a retractable control island. Did Mr. Comstock overlook it in his report on the "Biggest Ship Ever Built" [Aug., p. 128]?

KENNETH ROZETT, Brooklyn

Your memory is good, but the Navy changed its mind. Its experience with the canted deck carrier Antietam led it to eliminate the retractable-island feature intend-

Your engine's life depends on a film of oil twice as thin as the hairspring of a watch!

The clearance between many high-speed engine parts is after less than 1/1000th of an inch.

Use high-quality Quaker State for the film that keeps engine wear at a minimum

enduring super film that guards your engine against wear. A fine, stable, long-hasting film between moving parts that protects as it lubricates, cleans as it cools. Specifically made for today's high-speed, high compression engines, the result of a half century of continuous improvement. Quaker State is refined from 100% Pure Pennsylvania Grade Crude Oil. It is famous for lubricating qualities, for protection, and for long-lasting economy.

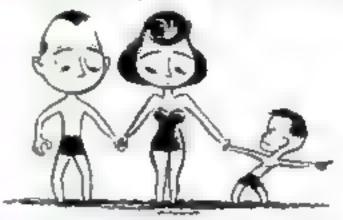

Quaker State Motor Oil is made in new streamlined grades to suit the requirements of all makes of cars and for every type of service. Ask your dealer.

QUAKER STATE DIL REFINING CORPORATION, OIL CITY, PA. Member Pennsylvania Grade Crude Oil Association ed for the Forrestal. This move cut \$5,000,000 off the cost of the carrier and caused Navy engineers to sigh with relief.

Sting Rays Don't Like Crowds

You had a very interesting article, as usual, on the ugly sting ray [July, p. 117]. I was especially interested since we plan to go to Atlantic City for our next vacation.

What are our chances of running into sting rays there?

MRS. PAUL HOOD, Columbus, Ohio

Sting rays like relatively quiet water and unpopulated areas. Since there are almost always bathers in the water at Atlantic City, the rays—if there should be any at all—would be inclined to move away. Besides, they prefer the warmer waters along the southern coast.

Slow But Hard to Beat

The LST's main trouble was that it was not speedy or maneuverable enough, but an airplane is not a feasible substitute for it, even the kind that you pictured in your August issue [p. 86].

In the sustained ground fire that the LSTs took, an airplane would be a pile of junk in seconds. With its propellers splmtered, nobody could move it, and with its rudder and ailerons shot up, it couldn't be steered.

Let ships stick to the sea and planes to the air.

LIEUT, J. J. STEVENSON, Cincinnati

Hot Under the Collar

To mention Sebring in the same breath as Le Mans, as Frank Rowsome did in "What Is a Sports Car?" [May, p. 98], enrages me. I would take leave to inform him that Lo Mans has been catering to international races more years than he has fingers and toes, while Sebring hasn't had enough rubber burned on it to distinguish it from a farm track in your Ozarks.

My criticism is not directed at POPULAR SCIENCE MONTHLY, which we Cowdens

INVENTORS

Learn how to protect your invention. The U. S. Patent Laws provide that any new and useful art, machine, article of manufacture, or composition of matter, or any new and useful improvement thereof, may be patented if the act of invention is involved. Therefore, every inventor with a valuable invention should take advantage of the Patent Laws and proceed for patent protection in order to safeguard his rights.

A patent gives the inventor the exclusive right to prevent others from making, using, or selling the invention claimed in the patent for a period of seventeen years.

The Patent Laws were enacted for the benefit of the inventor to give him protection for the features of his invention which are patentable. These features must be properly and concisely set forth and claimed in a formal application for patent, in order to comply with the requirements of the Patent Laws. For that reason, unless the inventor is familiar with patent matters, he should engage a competent registered patent attorney or agent to represent him. We are registered to practice before the U.S. Patent Office and are prepared to serve you in the handling of your patent matters.

A specially prepared booklet entitled "Patent Guide for the Inventor", containing detailed information with respect to patent protection and procedure, together with a "Record of Invention" form will be promptly forwarded to you without chligation upon request.

Employed by _____

think is the best of its type anywhere; but some of your contributors seem to think the world stops at the Atlantic seaboard. C. COWDEN, Darlington, England

A Bike Problem

I'd like to motorize my bicycle, as described in your August issue [p. 147]. But

mine is an English bike with hand brakes only. Is it possible to do so?

> FREDERIC S. VALACHOVIC. Wappingers Falls, N. Y.

Depends on the mounting of the caliper brakes on the rear wheel. If these interfere with the drive roller, perhaps they can be moved down. However, for safety's sake, let an expert do the job.

Nautical and Nice, Too

I built a model of the Sovereign of the Seas after reading your exceedingly helpful article [Dec. '53, p. 202] on how to do it. When I had finished the model, I housed

> it in a substantial showease to protect it from injury.

> Since that time I have added a ship's clock, a flashing lighthouse and some nautical figurines to the display, as you can see in the photo.

PAUL B. LIEBERMANN, San Bernardino, Calif.

A Jeer for Lear

John Lear's article "Let's Put Some Science in Science-Fiction" [Aug., p. 135] contained a phrase which is significantly self-descriptive: "To think imaginatively within a stated discipline."

It seems that modern science-fiction has strained the fabric of Mr. Lear's imagination. which, like aged rubber, has grown brittle and inflexible.

All through his article he calls for sciencefiction which describes the immediate

INVENTORS

If you believe that you have an invention, you should find out how to protect it. The first step is to have a search made of the prior pertinent U. S. patents. If a report on this search indicates that the invention appears patentable you can apply for a patent, and the specifications and claims should be prepared.

The firm of McMorrow, Berman & Davidson, with offices in Washington, D. C., is qualified to take the necessary steps for you. We can make a preliminary search on your invention, advise you whether we think it can be patented, and prepare your application for patent.

Unless you are fully familiar with the U. S. Patent Laws, we recommend that you engage the services of a Registered Patent Attorney to protect your interests. The patent laws are your laws. A patent gives you the right to prevent others from making, using or selling the invention claimed in your patent for a period of 17 years.

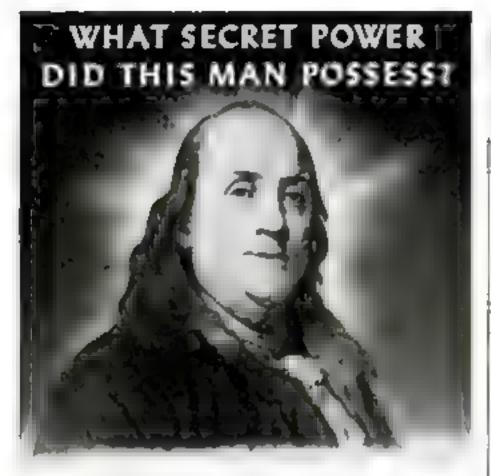

Use these patent laws for your protection. Investigate whether your invention can be patented. If you have what you believe to be an invention, we suggest that you have this firm make a search for you.

Send for a copy of our Patent Booklet entitled "How To Protect Your Invention," containing information about patent protection and patent procedure. Along with this we will also send you an "Invention Record" form, for your use in writing down and sketching details of your invention. We will mail them promptly. No obligation. They are yours for the asking.

McMORROW. BERMAN & DAVIDSON

future. This is his "stated discipline. This is the limit, in all four dimensions, of his imagination. This is why he wishes to transform science-fiction into a glorified science' reporting for school children and praises only predictions which have come true.

As Coethe once advised: "Before you reproach an author for obscurity, examine your own mind. Twilight makes even plan writing illegible."

BRIAN SKYRMS, Pittsburgh, Pa.

A Cheer for Lear

When I was a child I read stories Of Andersen's fairies and Grimm's, But when I matured a little I put away such childish whims.

I still read some fairy stories. But I like ones that could be true, So let's put the accent on science And skip all the hullabaloo.

I studied science in high school, I know my genes from my germs, So please don't offend this kind reader With tales about orange, talking worms.

Tell me of intelligent men Who dare to probe nature's mystery, Since you agree with me, John Lear, May your name go down in history.

Congratulations to you, sir,
May others avail of your tips,
On preparing our minds for space,
As others prepare the ships.
ELISABETE R. DYER, Old Orchard, Maine

Reads PSM for Over Half a Century

Harry T. Knox of Rock Island, Ill., has been reading POPULAR SCIENCE MONTHLY for 56 years. That adds up to a lot of maga-

zines (672, in fact).

Knox, 64 years old and a craftsman since his boyhood, remembers that he charged his first workbench with electricity to keep unwelcome visitors away.

"It's the pictures and color I like in the magazine these days," he says. "That's a big change from 1898, when my father gave me my first subscription." Knox also likes New Ideas from the Inventors. He's dreamed up quite a few gadgets himself.

Now IN YOUR OWN HOME Learn

Do you avoid passing on hills and curves? It can help you

save up to 40% on your auto insurance!

Read how careful drivers get top-notch protection at rock-bottom rates with

STATE FARM MUTUAL

If you use good judgment like the motorat in this picture, you're probably a careful driver at all times.

It should be easy for you to qualify for membership with State Farm Mutual—the "careful driver insurance company." It should be easy for you to save up to 40 per cent on the cost of your auto insurance!

State Farm Mutual, you see, deliberately aims to insure only careful drivers. This holds accident costs to a minimum. The savings are passed back to State Farm members in the form of low rates (a practice that State Farm has followed for all its 32 years).

And State Farm's 3 million members receive many other benefits besides substantial savings. They get the extra convenience of semi-annual payments at no extra cost. If they should have an accident, they get fast, efficient claim service readily available through State

Farm's own 7,000 agents and 700 claim expediters.

For full details—for the actual amount you can save — talk to the nearest agent listed under "State Farm Insurance" in the yellow pages of your phone book Or write: State Farm Mutual, Dept. 1-12, Bloomington, Ill.

THE BOOK ON

TRAIN FOR A HIGH PAYING JOB AS A TELEVISION TECHNICIAN NO PREVIOUS EXPERIENCE NEEDED — study AT HOME in your SPARE TIME

Next to the atom and hydrogen bombs, the biggest noise being made today is by the booming radio-television-electronics industry.

Now, while the boom is on in full force, is the time for you to think about how you can share in the high pay and good job sucurity that this ever-expanding field offers to trained technicions.

Just figure it out for yourself. There are more than 400 television broadcasting stations operating right new

and hundreds store to be built; more than 30 million sets in the country and sales increasing daily. By 1955 medievotely priced color television sets will be on the market and the color stampeds will be on.

All these facts mean that good jobs will be lacking for good men. You can be one of these men if you take advantage of my training now — the same training that has already prepared hundreds of men for successful careers in the radio-television-electronics field.

He experience necessary? You loans by practicing with professional equipment I send you. Many all my graduates who now held down good paying technician jobs started with only grammer school training.

of you have previous Armed Forces or civilian radio experience you can faish your training several months earlier by laking my FM-TV Technician Course, Train at home with hits of parts, plus equipment to build BIG SCREEN TV RECEIVER. ALL FURNISHED AT NO EXTRA COST (

After you finish your home study training in the Radio-FN-TV Technicise Course or the FM-TV Technicise Course you get two works, 50 hours, of intensive Laboratory work on modern electronic equipment of our associate school in New York City, Pierce School of Radio & Televisian
THIS EXTRA TRAINING IS YOURS AT NO EXTRA COST WHATSOEYER, My courses are complete without this extra training, however, it is just an added opportunity for review and practice.

Not all of my men make $^{\$}1000^{00}$ a month

... some make less ... some have made even more. If you would like to make a good income, spare or full time, it may pay you to look into my proposition. You don't have to make any investment. And you'll be doing a service to your community.

BY ALVIN WESLEY

Would you like to make up to \$1,000.00 a month? Right at this moment you're probably thinking, "Who wouldn't . . . if it were only possible!" Well, I wish I could show you the stack of letters on my desk. Hundreds from fellows all over the country. Here are some of the things you'd read:

"I put in just 51% hours of work," writes Hugh Sadler of New Jersey, "at a profit to me of over \$10 an hour." C. S. Melious of New York writes, "My first week my profit is \$175—I hit as high as \$44 profit in one day!" And Charles Kama, of Texas, writes, "I made more than \$1,000.00 a month and I haven't touched bottom yet."

Those are just a few of the letters. There's one from a fellow in Florida who earned \$600 in one month; another from an Ohio chap who made \$2100 in two months; and one from a New Hampshire man who picked up \$1800 in 20 months—pust in his spare time.

You bet I get a big kick out of letters like these. After all, I'm in business to make money. And the more money you fellows make—the bigger the profits here, too. But what you want to know now is what exactly is my proposition—and how much money can it bring you?

First. I'd like to tell you about the kind of men who do so well with me. They all want to make good money But they don't want to risk their savings. Some even want to hold on to their present jobs. They need something that requires no investment. No risks. They are more than willing to invest their time and energy. What they ask in return is to enjoy their work—full time or space time—and to make more money than they could in any other way

Well, that's exactly what my proposition brings to them—and to you. What is my proposition? It's a chance to bring folks a new kind of protection against fires at remerkably low cost. People everywhere are terrified of the fires that kill more than 11,000 people and destroy over 700 MILLION dollars worth of property a year. That's why they're so glad to learn about our new Presso Fire Extinguisher It's so small, so light that even a child can use it. Yet it shuffs out a fire in as fast as 2 seconds?

What s the secret? It's a new wonder chemical that the U.S. Air Force specifies for fighting free in Blos and Blos. Tests proved that, on an equal weight basis, 'C B" is up to six times more effective than other fire entinguishing chemicals. That's why tiny Presto can do the job of big entinguishers that cost 4 times more and weigh 8 times more.

Now I'm not being fair to you or to Preste just talling you about it You have to try it on a fire in a trash can or a bucket to believe how Preste snuffs out a blacing fire as fast as 3 seconds. That's why I want to get a Presto Demonstrator into your hands. To let you prove to yourself that it 'sells on hight' to owners of homes, tars farms garages—and to stores for resule Especially when the price is only \$3.98 each

Over 2 MILLION Prestor have already been sold—by fellows just like you My company is now one of the biggest and the busiest in the business. I'm able to run advertisements about Presto in national magazines like LIFE, to make things even easier for you.

Now I want to talk about just how much money you can make with Pres-

ALVIN WESLEY

to. In all honesty, that is entirely up to you. Prests can only be bought from me through you. There are no middle-men. No big dea ers. That's what helps to keep the price so low, and your profits so high—up to \$2.18 on a single unit.

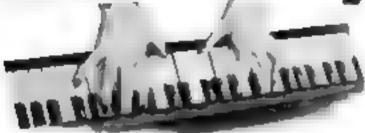

I refill your demonstrators free and supply you with a complete Sales Kit Free free certificates teatifying that Presto is GUARANTEED FOR 20 YEARS. I also send you my helpful, free, booklet called "How to Make Money with Presto-Full Time or Spare Time," In it I tell you step-by-step how to get started, ... where to go, who to see, what to do and say ... how to get orders in many different ways... how to place Prestos in local stores for re-sale... and much

You'll enjoy working with Presto You'll find that folks will really appreciate the wonderful low-cost protection you bring them. You will be making friends as well as money That's why I want to send you all the facts and the Complete Sales Kit free. Address your envelops to me personally. Sand the coupon below. I'll put the PREE Bales Kit in the mail immediately, postage prepaid. Then you can decide. Write to me now while you are thinking about it. I'll be looking forward to hearing from you. THREE REASONS I prepared myself for a BETTER JOB!

"Even if I had only myself to think about, I'd want more job security. But I've got Mary and the two kids counting on me. And they're three of the best reasons a man ever had for wanting a job he can count on for more money and a secure future. So I stopped just "wishing" and "hoping" for promotion. I DID something to make it happen. I enrolled with I.C.S. and earned my "ticket" to a better job—an I.C.S. diplome.

1973 Promotions in One Single 120-day Period I

If YOU want to start moving up in

the world-getting higher pay, doing more interesting work and ridding yourself and your family of constant money worries then I C S. is ready to help you, just as it has helped thousands and thousands of others. For example, a recent survey showed that, in one single 120-day period, 1973 I C S. students were promoted to better jobs! You can prepare yourself at home—for only a few cents a day.

I. C. S. is the oldest and largest correspondence school. 277 courses. Business, industrial, engineering, scademic, high school. One for you, Direct, job-related. Bedrock facts and theory plus practical application. Complete lesson and answer service. No skimping. Diploma to graduates.

Shrinks Hemorrhoids New Way Without Surgery

Science Finds Healing Substance That Relieves Pain-Shrinks Hemorrhoids

For the first time science has found a new bealing substance with the astonishing ability to shrink hemorrhoids and to stop bleeding - without surgery.

In case after case, pain was relieved promptly. And, while gently relieving pain, actual reduction (shrinkage) took place.

Most amazing of all - results were so thorough that sufferers made astonishing statements like "Piles have coased to be a problem!"

The secret is a new healing substance (Bio-Dyne®) -discovery of a world-famous research institute.

Now this new healing substance is offered in cintment form under the name of Preparation H * Ask for it at all drug stores -money back guarantes. "Trade Mark

his year simplify your Christmas shopping and make sure you get the gifts you want.

Check the following pages of the Christmas Gift Mart carefully for gift ideas. Jot down those you want for YOURSELF And since there are suggestions for everyone, list the presents for the whole family on the handy Memo on this page, If you're in doubt, let the others in the family browse through the Gift Mart and jot down the gifts THEY want themselves.

These well-placed hints will cut out your shopping headaches and insure a truly Merry Christmas for you this year.

• Bell clangs . . . • Yazimeter registers .

Fuscinate the youngsters with hours of fun and action. Imagine — every car WORKS in the line of dutyl 7 car with working windshield wiper, 2 cars with windows that open and close, — Gast moves 1 police car with gun that beings and receils, 2 ambulance with ringing Terrific and swaying belt, 2 texts with maters that register fore, 1 fire chief car value! with bell that rings and sways. All 8 cars made of durable steel... Only subber wheels cannot come out... bettoms completely enclosed... all new Two-tone and metallic finish... all differently colored. SEND NO MONEY. The sensational New vise for home workshops WERSANISE

建筑的现在分词的现在分词的现在分词的现在分词的现在分词的现在分词的

spins horizontally or vertically...
automatically locks in any position

When placed an base in harisantal position, it lies flat on either side for right or left hand use—turns to most convenient work position.

Useable for hundreds of woodworking jobs — Versa-Vise is the most adaptable vise ever made for home workshop use. Versa-Vise stands upright, or lies flat on either side—spins in a complete circle regardless of mounted position. Automatic lacking device allows work to be held wherever most convenient and automatically locks in position giving a safe, sure grip. Smooth jaw surfaces are 2½"wide, 4"deep. Jaw opening is 5".

The Versa-Vise is an ideal holiday gift.

See your local hardware dealer and if he does not yet carry Versa-Vise, fill in the coupon below. Your Versa-Vise will be shipped postpaid immediately.

SPECIAL VERSA-VISE FEATURES AND ADAPTERS

Standard Base furnished with each Versa-Viee. Extra bases can be mounted elsewhere to give added versatility...\$1.70 each. Right Angle Adapter fits over standard base. Allows vise to be used in almost any concervable position \$1.40 each.

Flush Bose fits flush with top of work bench when not in use . . . \$4.85 each.

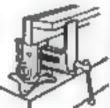

Sending-Versa-Vice holds work conveniently for necessate finish-

Coping Sam-Versa-Visa holds intricate woodwork gently but fruity.

Gineing—Verte-Vise used as a gineing damp, Jaw pressures are equalized, leaves the finjahed wood stock unmarred.

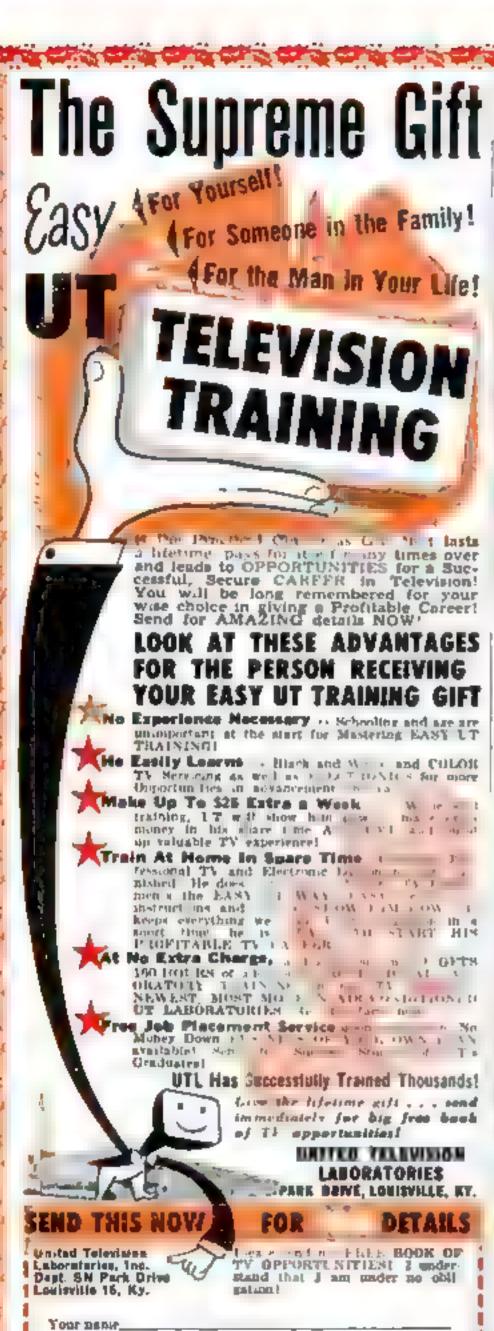

Visit your local hardware store, or use this handy coupon to order your Versa-Vise.

NEW

BUILD 15 RADIOS Powerful

AT HOME With the New Improved 1955

Progressive Radio "EDU-KIT"

NOW INCLUDES HIGH FIDELITY, SIGNAL TRACER, CODE ÓSCILLATOR

- · Attractively Bift Packed
- · Free Boldering Iren
- Absolutely No Knowledge of Hadio Nesessary
- No Additional Parts Needed
- Executent Buckground For Television
- 10. Day Money-Burk Buarantea
- Behoof Inquiries Invetod
- **Bold in 79 Countries**

The "Edu-KH" stars you a Home Radio Technician Course at a rock bettom street. You will learn how to identify Radio Symbols and Diagrams, how to built rad on using regular radio schematics, how to wire add teletr in a professional manner. You will learn how to service and trouble shoot radios. You will learn tode. You will rare not will rate you will residue a practical basis adjustion in Radio, worth many times the small arise you may email arise you pay

THE KIT FOR EVERYONE

It is not necessary that you have even the stightest background in selence or radio. The Edu Kil is used by young and old by radio schools and stube, by Armed Forces personnel and Veterant for training and rahabilitation. No instructor is required footenetical are complete, temple and clear. You sended make a mistake.

PROGRESSIVE TEACHING METHOD

The "Edu Kit " uses the principle of "Learn by Daing." Therefore you will build reduce perform jobs, and conduct experiments in litualizate the principles which you learn You begin by learning the function and theory of each of the radio parts. Then you will find yourself canelrucing more advented multi tube radio sets, and doing work like a professional Radio Technicism. The "Edu Kit" instruction Books are exceedingly signs in their explanations phetographs and diagrams. These sets operate as 195 125 V. AC. DC. Adapter for 210-250 V. AC. DC available.

The Progressive Radio "EDU-KIT" is Complete

You will receive every part decisions to hull fifteen different radio sels. Our is to contain tubes, tube sockets, chass a variable condensates, alcoholy the sundensates, disa condensate, paper condensates received, i ne cords, to enium rectifiers, the atript, co. is, tand ware, tubing, instruct on Manuals, etc. A soldering from is included, as well as on Electrical and Rad a Tester Complete, easy is low instructions are provided in add too. the "Edy Kill" new contains lessons for servicing with the Pragrams on Signal Tracer, F.C.C (petryclions, qui gree. The Edy-Kill is a sumplety radio searce, down to the emailest detail

TROUBLE-SHOOTING LESSONS

Trouble shooting and servicing are included. You will be tought to recognize and repair troublet, You will build and learn to aperate a professions. Signal Tracer You receive an Electrical and Rad o Testar, and learn to use it for radio regairs. While you are learning in this practical way you will be able to so many a repair job for your neighbors and friends and charge fees which will far exceed the cost of the "Edu-Kit" Our Canaullation Service will help you with any technical problems which you may have.

MICRO-FLUFF

HIGH COST OF LIVING GETTING YOU DOWN? Went to add an extra \$100 or more to your regular monthly pay check in a few SPARE TIME hours of pleasant occupation AY HOME? That a last the position I was in a few years ago when I ran across an Old-World formula for applying short cotton fibers to practically any surface in such a manner that

cotton (ibers to practically any surface in such a manner that it looked and felt just like coally valuat or velour THIS PROCESS AMAZED ME. I spont severel years experimenting until I developed what I now call the FLOX-MAST. MICRO-FLUFF method. This NEW METHOD is far removed from the Oil World way of applying these short fibers. Also it permits the use of tiny fibers of RAYON and other modern materials in MANY COLORS in odd tion to cotton.

NO OVERHEAD, NO EXPENSIVE EQUIPMENT. Start in your basemont garage attic, service porch or even on a end table in your bedroom With an hour a practice you can apply a few pennies worth of FLOM KRAFT MICRO-FLUFF to a yard or two of butcher paper and make it look like \$15-

to a yard or two of butcher paper and make it look like \$15-a-yard ve vet for w p:low displays in the Supst Jewelry gift, or department stores etc. Takes only a few minutes and practically no effort

MICRO-PLUFF IS BEAUTIFUL AND LONG WEARING, Truly the most amount material you ever saw, Micho-Fauff comes in every color of the reinbow, is long lasting has the TOUCH appeal of juvenous velvet or surde and goes on practically any surface—paper, metal, wood, glass, plastic , aster rubber ate it is wonderful to line a iverware or hostery drawers cover and line jewelry boxes, decorate impeand lamp shades. Shush the inside of sulo trunks or glove compartments to protect Agends and accessories from accestching) re-cover women a party shoes, phonograph turntables etc. Apply to toys, figurines wal plaques signs store displays and a thousand-and one other tems, new or old FLOK-NRAFT MICRO FLUFF makes old objects beautiful and salable incresses value of many sew products by 500 to

By profit orders come from ac.ghbors, gift shops stores of his not Every household has one or more stems that can he saved from discard by a FLON-KRAFT job. Decorate store display cases and windows I juweters love this; and also supply them with fast-selling FLON KRAFTED gift items and

other merchandise Sintificturers are prospects for contracts to apply FLOK-MRAFT to furniture, instrument cases, bug gage and hundreds of other products. Every neighborhood needs a FLOK-KHAFTER. Start a profitable manufacturing business in spare time

with your own home as your headquarters

IGHT at this moment there is a tremendous demand for new business enterprises in a branch of the plastics industry. Fortunately, this is a type of manufacturing business that does not require heavy or expensive machinery, rented space for storage, production or sales. A portable hand machine does the work wherever electric current is available, and the working area can be in almost any part of your home.

The opportunity that is open to you today, is to meet this growing demand in a new industry by establishing yourself as the manufacturing agent in your own trading area. Beveral hundred of our machines are aiready in use in both large and small communities. Some are even being operated successfully by women whose family duties make it necessary for them to be at home during the day, but whose family income is not enough to meet rising expenses. Most are being operated by men. Many started in spare time just to pick up an extra five or ten dollars for an evening's work. They found the work so profitable that some have now given up former jobs to devote full time to a business of their own.

One of our manufacturers gets all of his business by mail. Orders and money come to him in envelopes and he sends his products out the same way. Another delivers his entire output to stores in the vicinity. An-

other does a wholesale business supplying other manufacturers who do the selling. Still another works with advertisers in the manufacture of plastic advertising novelties and special-

The operation of the machine is simple and easy for anyone to learn. It does not require any knowledge of chemistry, mechanics, or electricity. And what some say is best of all, a manufacturing business like this enables a person to make good money without any house to house canvassing. The machine turns out from \$5.00 to \$15.00 worth of work per hour and it can be operated for as short or long a time as you wish.

We have prepared a simple step by step instruction manual that not only tells how to operate the machine, but also tells how to get the business coming in at a profitable clip right from the start. We will lend a copy of this book to any serious minded man or woman with the

understanding that a copy will be given them free if and when they purchase a machine—or the copy we lend can be returned if you decide not to go into the business. Reading it will not cost you anything.

If you are interested in a nice little home business that can bring in an extra \$60 or more for ten or twelve hours work in spare time, send your name. All information on the book and machine will be sent free, postage prepaid and no salesman will call to bother you. You read about it in the privacy of your own home without outside pressure and then decide whether you'd like to take the next step. Address your envelope to me in person. Send me the coupon below. Or, if you prefer send your name on a post card and ask for "Free information on starting a manufacturing business at home" Either way, send your name today and find out about this wonderful new fast growing money-making business.

Don't let this spoil your driving comfort

The weakest link in your winter driving comfort may be a faulty motor thermostat. Ruinous to the cooking system, it causes the engine to overheat, anti-freeze to boil away. Or, it prevents the engine from heating properly, thus failing to warm your car heater. For assured driving comfort have your car thermostat checked today. If a new one is needed-

REPLACE WITH AUTOSTAT

Autostat provides day-in-day-out driving comfort because it's quality made by the pioneer builder of car thermostats. It assures quicker starts, faster warm-ups. Prevents waste of gas and oil! Gives more miles per gallon, more solid comfort per mile. Types available for every make and model including modern pressurized systems.

The Modern Motor Thermostat made only by Fulton Sylphon

Radioactive Tracer Tests Prove . . .

reduces top cylinder wear 40%

These results were achieved by one of America's most reputable independent oil laboratories using the most modern radioactive scientific instruments in a series of tests which compared wear on top piston zings with and without Pyroil "A" added to premium grade gasoline . . . Pyroil "A" in a continuous test reduced wear 40%. In normal stop and go driving the value of Pyroil "A" as a top engine lubricant would be even more evident!

HERE'S WHY!

Pyrell "A" contains on opent possessing a high polar alfraction for mutal, so it compositionally to all metal surfaces. Pyroil is also strongly attracted to all which means that it actually haids oil to the metal. Thus when two metal surfaces all de tagether the all is not squeezed out not will it drain or wash off

Pyrolf * A * lubricates valve slems and upper engine ports not properly lubricoled by crankcose oil Rust proofs unlice achaust system

PYROIL "B" Crankcase Additive Reduces Wear 17% when used with premium or heavy duty oils

Another test by a petroleum laboratory shows a 17% reduction

in engine wear when Pyroil 'B' is added to one of the top grade heavy duty oils, due again to its polar attraction creating a thin film of an extreme oiliness nature which will not drain off, wash off or squeeze off. Keeps hydrautic valve lifters free -- makes starting easier!

The Perfect Pair for Motor Care

Pyroli "A" complete apper angles labrication only 25¢ Pyroll "B" complete transcase treatment only 75¢

IT PAYS TO PYROILIZE

PYROIL frostfree "A" - Gasoline Anti-Freeze Plas top engine lubrication B ez, only 50¢

PYROIL frostfree "B" - Wanter Crankcase Additire plus condensation protection 12 ox. only 79¢

Sold by leading gasoline stations, garages and automotive stores in Canada, Cuba and most foreign countries. Write for descriptive literature.

Hand Cocked Independent of Bolt Sievens Model 19 —.22 cal. single shot, bolt action rifle. Stock correctly proportioned for both grown-ups and youngsteen. Hand-cocking action, independent of bolt, provides maximum safety. Other leatures include: Bolt handle directly over trigger for fast operation . . . new stock with bandsome black-tipped fore-orm . . . 24" barrel . . . gold bead front night and open rear night with elevator.

Just dropping a hint to Ford owners FALLING LEAVES are rustling out the message that right now is the time to have your Ford "winterized" Then you'll know it's ready to take on winter's roughest weather. For one thing, you'll want your ignition system gone over and, if new spork plugs or battery will step up its performance, insist on Genuine Ford Spark Plugs and Battery You II also want to have your cooking system protected with Genuine Ford Anti-freeze, permanent or regular. When your oil is changed, a new Genuina Ford Oil Filter Element will keep it clean under winter conditions. Always remember that you can depend on Genuine Ford Parts because they re made to specifications set by the same men who originally built your ford. MEREVER YOU GO,

Sonic Magic: Silent Screams Carve Hardest Materials

Microscopic chisels powered by sound waves are replacing the diamond in industry—and may mean painless dentistry for you.

By Alden P. Armagnac

SOON your dentist's chair may be just a nice place to lean back and relax. That is the promise of a newly introduced, painless dental drill, an instrument that looks like an overgrown mechanical pencil at the end of a flexible tube.

Unlike the dentist's traditional rotary drill, this radical new type has neither rotating

bur nor whirring drive cord, Its tiny bluit tip cannot be seen or felt to move. Actually it vibrates a microscopic distance, 29,000 times a second, By impart-

end of table fork, used as tool, pierces glass tumbler in less than a minute's time.

ing this mechanical motion to particles of aluminumoxide powder suspended in water it drills teeth gently but effectively.

Employing the magic of silent sound, vibration too rapid and high-pitched for human ears to hear, ultrasonic tools now cut the hardest and most brittle materials with ease. The new dental drill is the latest of them; its big brother, an ultrasonic ma-

chine tool, has already made its debut in industry. At the Cavitron Equipment Corp. plant and laboratories in Long Island City, N. Y., where both were in-

tNTERCHANGEABLE TOOLS for ultrasome cutting machine yield variety of useful and ornamental carvings. "Cookie cutter," left of center, turns out 37 jewel-bearing blanks at a time.

INTRICATE SHAPES are cut with ease in "unmachinable" materials by ultrasonic tool. Examples are these tungsten-carbide dies and, at right of center row, a tool-steel gear mold.

THERE'S NO DANGER in touching ultrasonic cutting head in action, as above. It feels greasy

when it's running, but not when it stops—a mystery that no one can explain.

vented and developed, you see these wonder-working machines in action.

Just as a housewife slices vegetables and cuts cookies, an ultrasonic machine tool slices lumps of synthetic ruby and sapphire into wafers—and then neatly cuts out round and perforated blanks for jewel bearings of watches and meters.

Ultrasonics Replaces Diamonds

It "dices" brittle germanium into minute squares for the tiny transistors that are replacing vacuum tubes nowadays. It carves dies of intricate shapes from ultrahard tungsten carbide—a material that could be cut, until recently, only with diamonds.

As easily, it does spectacular stunts. Using as cutting tools the cut-off ends of a table fork, a cheap pocketknife blade and a drugstore nail file, it thrusts them respectively through a glass tumbler, a drill bit of high-speed steel and a husky machine-shop file. In the photos of the feats on page 97, fork, knife and nail file are exact duplicates of the ones actually used.

Ultrasonic machining had its beginnings in 1942 with experiments by a Cavitron staff physicist, Dr. Lewis Balamuth, Silent sound, he knew, had the remarkable power of blending substances like oil and water, which ordinarily will not mix. What would happen, he wondered, with materials as utterly foreign to each other as liquid mineral oil and solid, insoluble Carborundum powder? To satisfy his curiosity, he suspended an ultrasonically vibrating nickel tube in a glass vessel containing the mixture.

What happened was the last thing anyone would have expected. The tube began cutting a hole in the glass! And the ring-shaped hole was exactly the size and shape of the tube's end.

"Hammer" Drives Microscopic Chisels

Hardly believing his eyes, Dr. Balamuth pounded the end of the nickel tube out of shape, and repeated the experiment. This time the tube cut a hole of just the same irregular shape as its mashed end. No doubt remained of the

PAINLESS DENTAL ORILL draws power from cabinet in background. Unconventional glass-toothed model of jaw tested experimental design's convenience of use in any position.

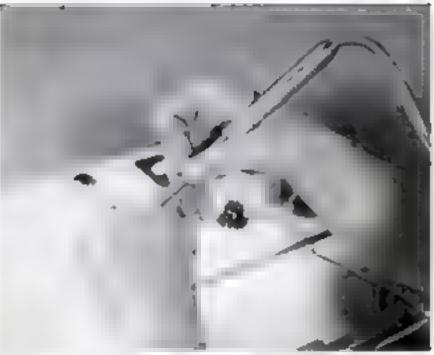

explanation. The vibrating tube was acting like a hammer upon the tiny particles of abrasive in the liquid, driving them like miniature chisels against the inner surface of the glass vessel. There, they carved the precise image of the tube's end. By the same principle, a tool of any shape whatever could cut its likeness into the most resistant material. Only the abrasive particles would need to be hard; the tool itself could be of relatively soft, easily shaped metal.

Machines Are Already at Work

First machine to put the discovery to practical use has been the industrial model developed by the Cavitron firm, with Dr. Balamuth as research consultant. More than 100 of these have been built, and leased or sold to several dozen leading manufacturers.

In general appearance, this model resembles a milling machine, A powersupply cabinet on casters, beside it, feeds 1,000 watts of variable-frequency alternating current to a water-cooled cylinder, the heart of the machine.

A coil within the cylinder magnetically constricts and relaxes a vertical drive shaft of nickel at an adjustable rate centering around 25,000 times a second. At the same rate, a toolholder screwed to the free lower end of the drive shaft dances up and down. So does any cutting tool, conventional or unconventional, that has been brazed or screwed to

prill is HARMLESS to flesh, as shown. The latest model supplies its own dental cutting fluid; aluminum-oxide powder suspended in water. Eye dropper applied it in first trials.

one of the interchangeable toolholders. But the tool's stroke is so short, only one or two thousandths of an inch, that you cannot see it move.

To advance the tool against the work, this counterweighted cutting head descends by gravity, sliding vertically on ball bearings. Meanwhile, two nozzles direct streams of water containing an abrasive powder—aluminum oxide or boron carbide—at the tip of the tool.

Swiftly the tool sinks into materials as varied as hardened tool and die steels; boron, tungsten and titanium carbides; glass, fused quartz and ceramics; granite, marble, gem stones. A needle circling a depth gauge shows its progress.

Only sign of its ultrarapid vibration is that it turns the water to mist, with a gentle hissing sound. That's all you hear, instead of the usual noise of machinery.

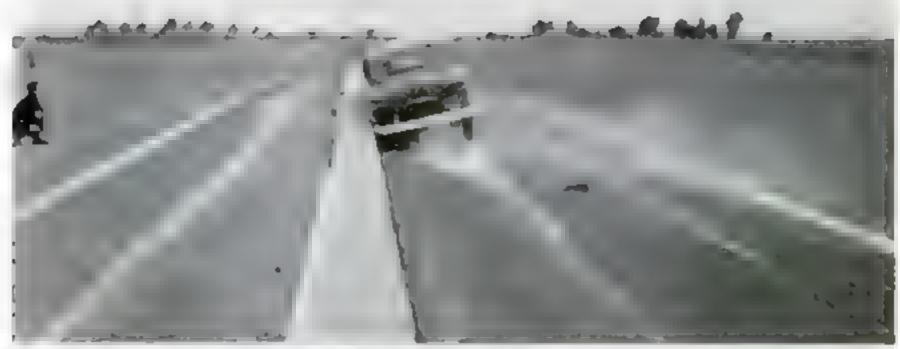

Tool Is Safe to Use

You can touch any moving part, even the cutting edge, without harm. The tool cannot cut flesh, but only unyielding materials—the harder, the better.

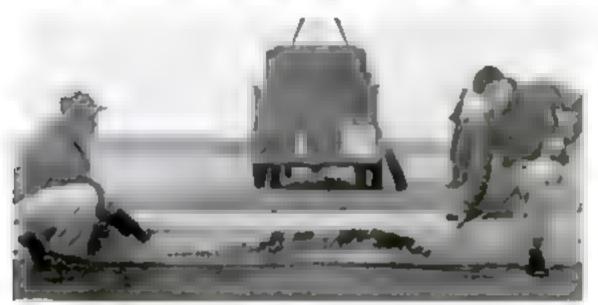

News of the ultrasonic machine tool's recent introduction brought unexpected queries to the makers.

Dentists were interested in the possibility of drilling teeth by ultrasonics among them Dr. Carl R. Oman, professor of dentistry at Columbia University's

Beefed-up sedan whams into test curb on Sacramento airport Driver, strapped in, was unhurt.

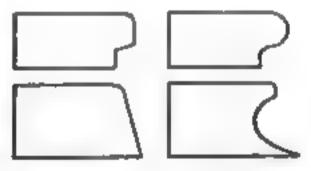

Tire marks show how this curb nudged the car back into lane.

Test crew looks over damage to the car in high-speed crash.

What's the Best Shape for a Curb?

To FIND out, A. W. Kessinger, a test driver for the California highway department swerved his '49 Ford 149 times into curbs of 11 shapes at 5 to 50 miles an hour. He wrecked 12 A frames, 10 wheels, two tires, one tie rod. And he found the shapes shown below, in 9- and 12mch heights, most effective in keeping the car in lane. Officials plan more tests to pick one best design to separate future dual highways.

Wooden Gun Trains Gls in Japan

This working demonstration model of the M2 carbine was built by GI craftsmen to speed the training of U.S. forces in Japan. Army instructors there say 85 percent of a man's learning comes from thus seeing how things work.

Plane Nearly Lifts Its Weight In Fertilizer

What looks like smoke pouring from the light plane at left is fertilizer - 1,250 pounds of it. The plane itself, a Fletcher FU-24 built in Pasadena for this special chore on New Zealand farms, weighs only 1,909 pounds. It has a 225-hp, motor.

F-100's Road Is Choked Off For Line Test

The tailpipe of North American's F-100 Super Sabre at right juts into a silencer unit fitted with a nearly soundproof collar. This deadens the roar of preflight operations, which are the last step on the production line.

Big Turboprop Transport Takes Off in Unusually Small Space

GETTING off the ground in one-third of the run most planes of its size must make, the Air Force's new YC-130, made by Lockheed, is seen above during tests at Edwards Field. Calif The big transport which loads through a rear door under its high tail, has four 3 750-hp, turboprop engines and can carry up to 20 tons.

ID2 POPULAR SCIENCE

Plumbers' Olympics Stress Their Skills

CONTESTANTS bunked and ate in Purdue halls, were graded by University professors.

Union and university honor America's best apprentices.

FOR three busy days, 70 of the best apprentices serving the plumbers and pipe fitters of America competed at Purdue University for prizes totaling \$3,500. They took long written exams, and vied in lead wiping, pipe-bracket welding, copper-tube sweating, valve assembling and several other aspects of plumbing in

this first national plumbing Olympics.

The United Association of Journeymen and Apprentices of the Plumbing and Pipe-Fitting Industry, an AFL union, sponsored the event on the West Lafayette, Ind., campus with the help of industrial, engineering and scientific groups. Why?

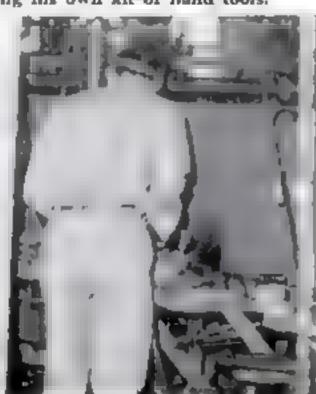

"We are not adding sufficient apprentices to guarantee our continuation as a craft organization," President Durkin of the union explained, "Craftsmanship in the building trades is being watered down. It is our obligation to industry, the general public and government to organize our apprentice program so that after the scientists and engineers have done their jobs we can step in and construct any plant or building."

Men from 36 states and three Canadian provinces who are now in their fifth and last year of apprenticeship demonstrated their skills at Purdue after winning state contests. Their expenses and wages for a week were paid by the AFL locals that they represented.

IN UNIVERSITY SHOP, apprentice plumbers showed their skill at welding by making tri-

angular pipe-support brackets. Each contestant brought along his own kit of hand tools.

IR POPULAR SCIENCE

MOST SPECTACULAR TEST required pipe fitters to cut pipe of half-meh steel and weld it into a double-jointed 90-degree bend, using both acetylene torches and are welders.

PLUMBERS often must boist pipes. So they must know how to tie knots and signal to others. Here a bowline tied by one of the apprentices is being given a thorough examination.

\$1,000 PRIZES were won by Freeman Number 1.08 Angeles (shown at left below, doing lead work). and Robert Berns, 25, of Milwankee, kmcard

PIPE FITTERS looked their welding work over critically before the engineering-college faculty judged it. Reporters were the only spectators who were allowed in the test room.

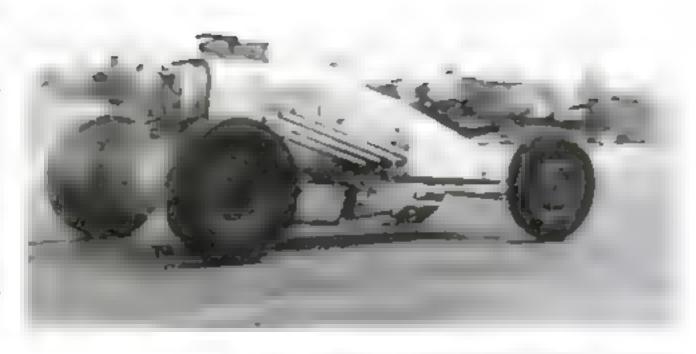

was judged the best plumber. Berns best pipe fitter. Martin P. Durkin, union president and former U.S. Secretary of Labor, presented checks at banquet climaxing the contest.

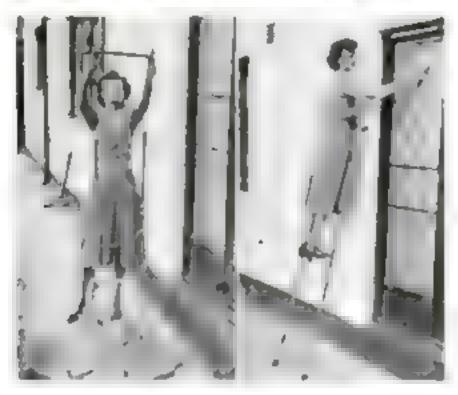

Dragster with Slant Nose Hits 144 M.P.H.

REAR tires smoke as Don Yates takes off near Los Angeles in this dragster for a quarter-mile run that hits 144 m.p.h. The car weighs a third as much as a medium-size passenger job, but gets 400 hp. from its Mercury V-8.

Tubing on Wire Makes Ladder

It's like stringing beads. Mrs. Constance Miller of Esher, England, pulls the wire on which some pieces of tubing are strung—and there's a sturdy, rigid, eight-foot ladder for the window-cleaning job. The collapsible ladder, called a Rollarod, was invented by Mrs. Miller's husband.

Plastic Window Gives Sky View

Waxr a window on top of your ear? You can get one as an accessory—tinted plastic that fits in a hole you jigsaw in the roof. Screws hold it in and a special compound seals the edges. Key Kap Co., 739 S. Main St., Dayton, Ohio, makes it.

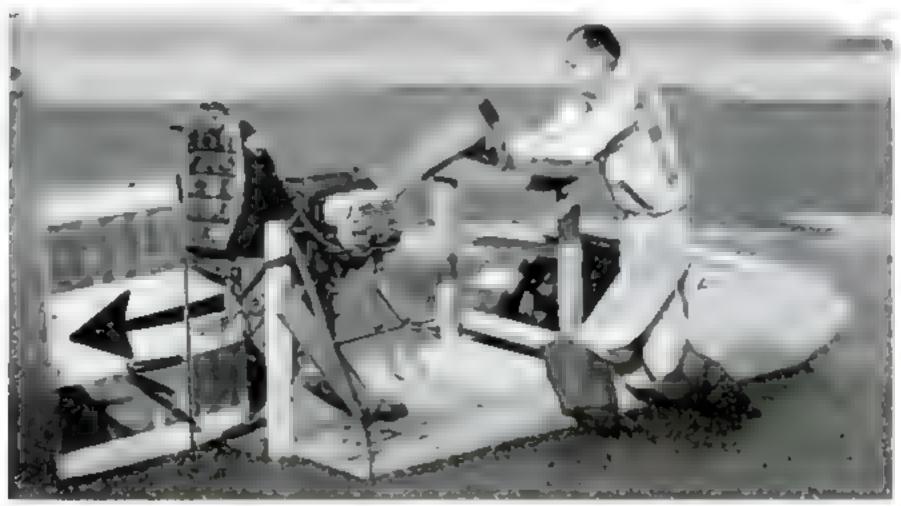

Truck Squeezes Load to Lift It

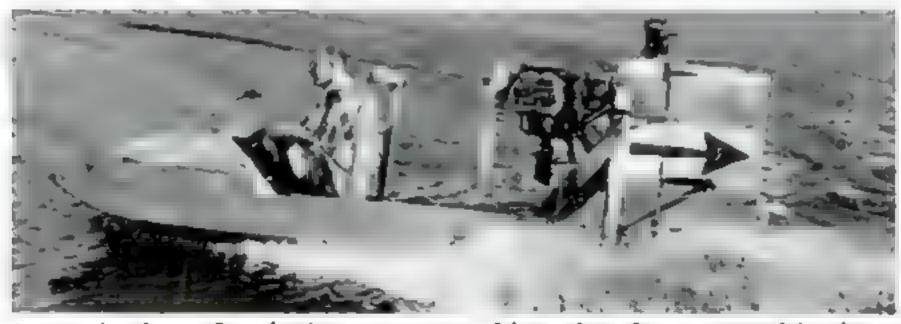

This fork-lift truck works without forks. It has arms that squeeze the load from the side. That way it can pick up a stack of cases even when they are not piled on a wooden pallet platform. The Warehouser is made by Yale & Towne Mfg. Co., Roosevelt Blyd, and Haldemann, Philadelphia 15.

Airboat Speeds Up Cranberry Harvest

This is the way John Garretson Jr., a Navy war veteran, harvests his 40 acres of cranberry bogs on Cape Cod, Mass. Instead of wading and raking berries from the submerged vines, he just cruises the flooded bogs in a shallow-draft airboat.

Garretson cranks prop-driven boat. Under way (below), turbulence shakes berries off vines.

A convenient breeze floats berries to one corner of bog, where they are scooped into boxes.

Their Tallest Tales

Are True...

"SAM THE WEATHERMAN," veteran cooperative weather observer, notes the temperature at Plannfield N. J. on Dec. 26, 1947, the day he recorded that area's record breaking 23-inch snow

Ten Thousand Hardy Amateurs Record Your Weather

INSTRUMENTS supplied to volunteer weathermen include this swivel psychrometer (a pair of wet- and dry-bulb thermometers) that Sam is shown resetting after recording the humidity.

SAM MEASURES RAINFALL on Government gauge in his back yard. Rain falls into open cylinder and funnels into a smaller tube that thus "magnifics" the amount for easier reading.

Volunteer U. S. observers win law suits, help business and settle neighborhood disputes.

By Herbert Yahraes

SOME time ago a lean, elderly man with a white mustache took the stand in a New Jersey court. It was a divorce case, with the husband charging unfaithfulness. The principal witness had testified to standing in the street one night and noticing certain goings-on in a room on the second floor.

The new witness—called by the defense—identified himself as Samuel K. Pearson of Plainfield, N.J., a cooperative observer for the U.S. Weather Bureau. His work for the Government, he ex-

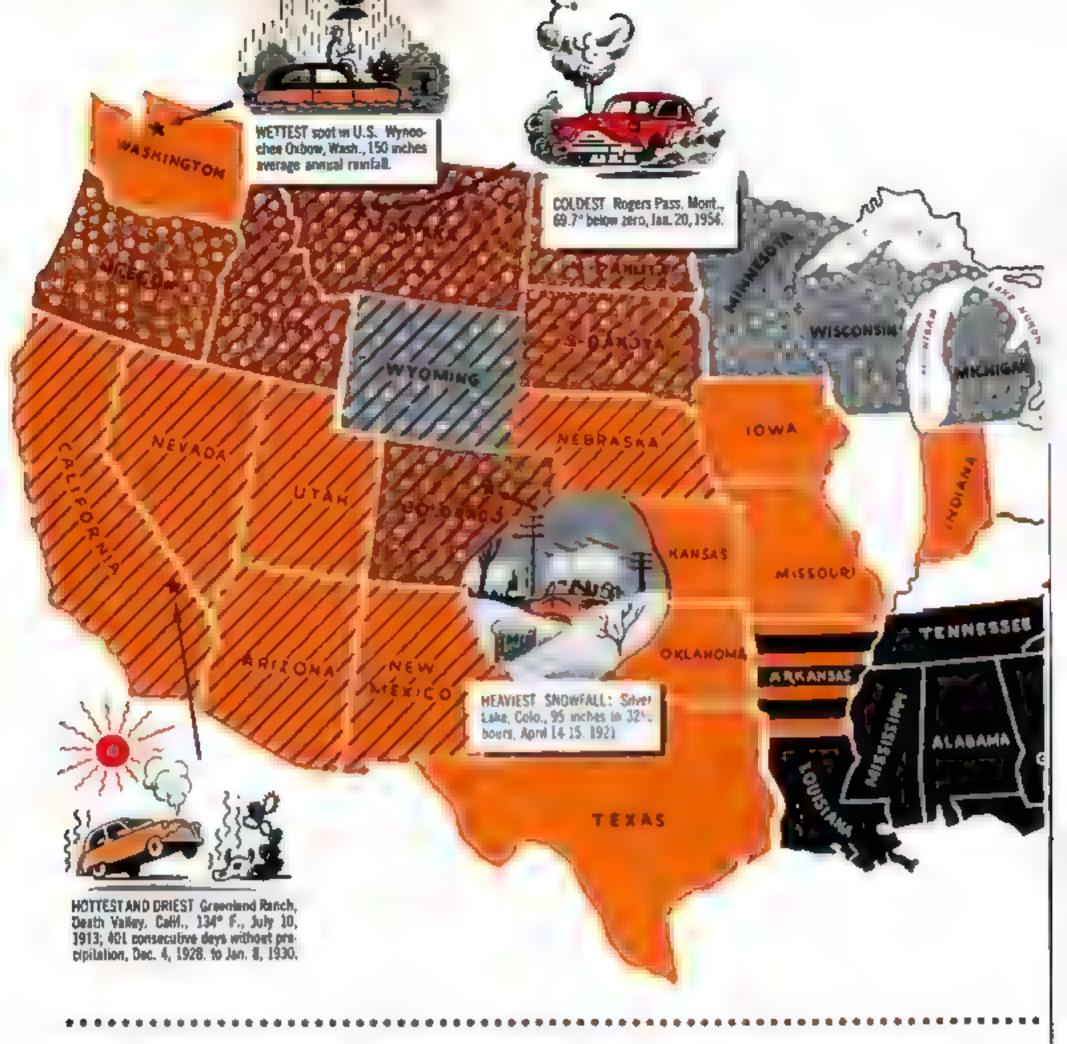

plained, required that he keep careful records of each day's weather.

Did he have a record for the evening in question?

Pearson did. He referred to an official form. During all the time that the other witness had been standing in the street, peering upward into a second-story room, the weatherman testified, a thunderstorm had been raging.

Pearson has ruined many another case during his 49 years of observing the weather. A storekeeper once sued a municipality to recover damages he suffered when a sewer became clogged during a rainstorm and the backed-up water flooded his cellar and ruined his goods.

It looked like an open-and-shut case until Sam the Weatherman—as his letter-

head reads—took the stand, "How much rain fell on the lifteenth day of August?" he was asked.

Sam consulted his records and replied, "Not a drop."

Sam has helped win cases, too. A man who had slipped on the ice was suing for damages. Because of a defective leader, he claimed, water from melting snow on the roof had run over the sidewalk and frozen

The defendant's lawyer ripped into the weatherman. How could water be flowing from the roof while freezing on the sidewalk?

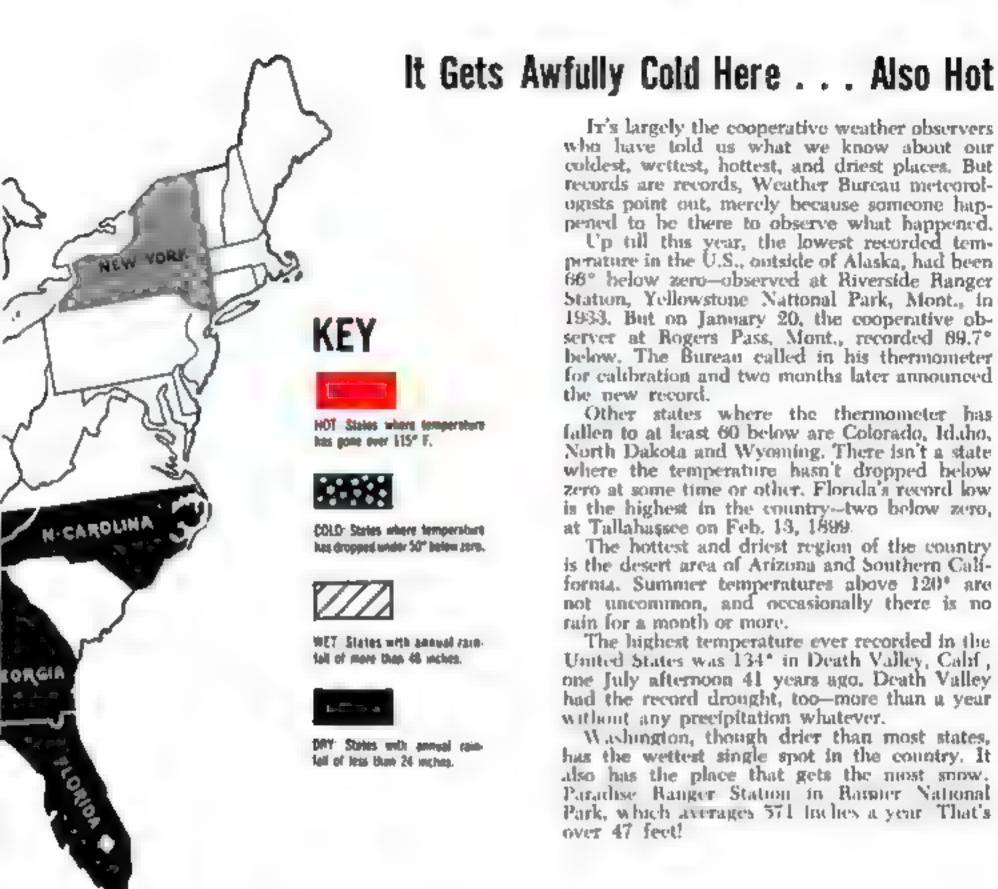

Easy. Sam's temperature record for

the time of the accident showed the mercury at 30 in the shade—cold enough to have frozen the water on the walk. But the roof, heated both by the sun and by radiation from the house, could well have been warm enough to melt snow.

Volunteer Records Reveal Our Climate

Pearson is one of almost 10,000 men and women who have volunteered their services to the Weather Bureau. Officially they are known as cooperative weather observers

Like Pearson, many of them are called on as expert witnesses, but testifying is only a sideline. Many of them also do

It's largely the cooperative weather observers who have told us what we know about our coldest, wettest, hottest, and driest places. But records are records, Weather Bureau meteorologasts point out, merely because someone happened to be there to observe what happened.

Up till this year, the lowest recorded temperature in the U.S., outside of Alaska, had been 66° below zero-observed at Riverside Ranger Station, Yellowstone National Park, Mont., in 1933. But on January 20, the cooperative observer at Rogers Pass, Mont., recorded 69.7° below. The Bureau called in his thermometer for calibration and two months later announced the new record.

Other states where the thermometer has fallen to at least 60 below are Colorado, Idaho, North Dakota and Wyoming, There isn't a state where the temperature hasn't dropped below zero at some time or other. Florida's record low is the highest in the country—two below zero, at Tallahassee on Feb. 13, 1899.

The hottest and driest region of the country is the desert area of Arizona and Southern Califorma. Summer temperatures above 120° are not uncommon, and occasionally there is no rain for a month or more.

The highest temperature ever recorded in the United States was 134* in Death Valley, Calif., one July afternoon 41 years ago. Death Valley had the record drought, too-more than a year without any precipitation whatever.

Washington, though drier than most states, has the wettest single spot in the country. It also has the place that gets the most snow, Paradise Ranger Station in Ramier Valional Park, which averages 574 Inches a year. That's over 47 feet!

some unofficial forecasting, but that's only a sideline, too. Their real job is to record the American climate.

To that end, the observers-spotted across the land at least one to a countyread their Government-supplied instruments every day and send in detailed reports every month. Without their work, precise knowledge of the climate of the United States would be limited to those comparatively few areas where the Bureau has full-time, paid weathermen.

You might be surprised to know all the uses to which climatic information can be put. For example, a big chain-store company wanted to determine as scientific-

ally as possible just where and when it ought to be well stocked with umbrellas, heavy clothing and other seasonal items. So it asked the Weather Bureau for data about the temperature, rain and snow in every town where it had an outlet. Thanks to the work of the cooperative observers, the Bureau could oblige.

Where Can You Grow Castor Beans?

Similarly, a maker of snow tires wanted the dates of the earliest snowfalls in scores of communities across the country.

A manufacturer of castor oil knew where castor beans were already being grown. Now he wanted to know the chmate of those areas, in terms of rainfall, temperature and sunshine, so that he could look for similar areas elsewhere in this country and abroad. The Bureau got him the information quickly; it was all in the records piled up by its volunteer assistants.

These records are published monthly for each state and are also kept on

punched cards at the National Weather Records Center at Asheville, N.C. If anyone wanted to know, for example, all the places in the U.S. where the temperature reached five above zero on a certain day 10 years ago, the cards could come up with the answer in only a few minutes' time.

The information collected by the unpaid weather workers is also used to help select industrial sites, design building materials, establish premiums for insurance against storm damage, set specifications for gasoline and lubricants, determine the loan value of farm lands, and choose the types of clothing and equipment to be issued for Army personnel

Let's look in on a typical observer-Ar-

lington E. Race of Spencertown, N.Y Race is a full-time police officer; he is also a volunteer fireman, township tax collector, trap drummer in a dance orchestra and a sign painter. Yet every evening for 25 years—and before that, for nine years at Hudson, N.Y.—Race has been going out to the louvered shelter back of the house promptly at six o'clock and noting the temperatures on the two Government thermometers hanging there.

One instrument registers the maxi-

mum temperature reached during the last 24 hours; the other, the minimum. After reading them, Race resets the thermometers in accordance with a page of detailed instructions issued by the Weather Bureau, closes the shelter, and looks at his rain gauge. In wintertime, if there has been snow, he measures the depth not only in the gauge but also at several

representative spots on the ground. Then he carries the gauge inside and melts the snow so he can measure the actual precipitation. (Snow varies widely in its wetness; on the average, though, one inch of snow is equivalent to one-tenth inch of rain.) Finally, Race enters his findings on a permanent record form.

"This work isn't hard," he comments, "but it is confining."

One December afternoon in 1947, for example, George P. Kirsten, the observer at Ridgefield, N.J., left his job in a New York City bank at 2:30. It had been snowing for hours. Unable to get across the George Washington Bridge, he took a ferry to the New Jersey side of the Hudson River and began the

four-mile trudge home. Climbing the Palisades, he fell a dozen times but made the top. Then he stumbled, and was too exhausted to rise. The snow covered him. About five o'clock a truck came along and almost ran over his leg. The driver shook him awake and gave him a lift home. Thereupon, Kirsten shoveled through snow up to his knees to get to his instrument shelter.

A Weather Bureau volunteer can't help

[Continued on page 268]

WEATHERMAN Arlington E. Race of Spencertown, N.Y., is also a full-time policeman, a volunteer fireman and the township tax collector.

Discreet Rolls Royce
Has Hidden Luxuries
for Roughing in Style

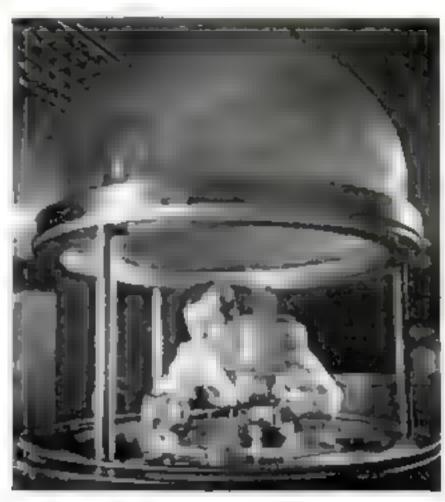

A teacup could rest on the retractable radio.

AMERICANS who take the half ton pick-up when they go out loaded for crow will-if also loaded with dough-be interested in the Rolls Royce Countryman Saloon. Though dignified enough to cause no embarrassment in town, it is "a most luxurious shooting brake," For your \$14,000 you get special coachwork on a Silver Dawn chassis. If the field trial or grouse shoot is just too fatiguing, you have a wash basin in which to freshen up, an electric shaver for that blue shadow, a cup of hot tea from an electric kettle to revive languid spirits, and a cocktail bar if the tea won't do it. (If all else fails, the front seats fold into a bed.) In the morning the sun pours in the "sunshine roof."

Dummy Stands In for You in Tests

MEET Mark HI. A 200-pound six-footer, he risks plastic flesh and metal bones in aircraft safety tests. Alderson Research Labs., 10 E. 38th St., NYC, designed it to duplicate a big man.

Carburetors Tested in Bubble

A GIANT bell jar fitted with vacuum pumps (above) makes altitude to order for carburetor tests. Ford research engineers use the plastic bubble to simulate the rarefied atmosphere of the mountains or the seashore's denser air.

Big Crash Crane Picks Up a Bomber and Rolls Off with It

THE Dutch crash crane above can lift a 17% ton plane like this B-25 and tote it to a hanger. The tractor acts as a forward counterweight, while, for lateral stability,

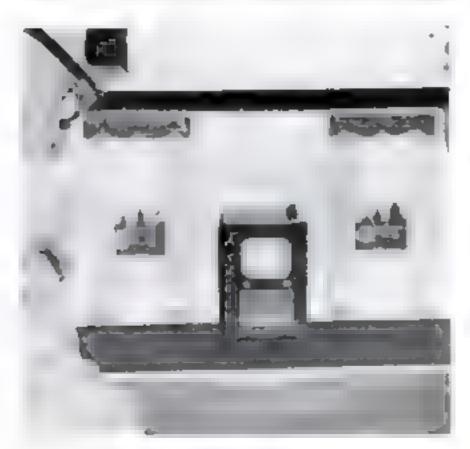

the rear axle can be extended to increase the wheelbase almost four feet. A pump run by the tractor's 200-hp, diesel engine supplies hydraulic power to operate the crane,

Light Plane Lowers Supplies in a Bucket, Helicopter-Style

A LIGHT plane makes like a helicopter to lower supplies to missionaries in the Ecuadorian jungle. The trick is to fly a tight circle at low altitude. This makes the supply bucket, on the end of a 1,500-foot line, move to the center of the circle and sink

gently to the ground. It stays there for easy unloading (above left) so long as the plane thes the circle. Originated by Nate Saint of Quito, Ecuador, a Moody Bible Institute pilot-missionary, the technique is shown being demonstrated near Chicago.

Tiny TV Has One-Inch Screen

PROBABLY the world's smallest TV set, this dollhouse unit was built by Tom Stuart, electronics engineer at the Naval Supply Center in Norfolk, Va. It really works—for viewers who sit close—producing sharp images of telecasts on its one-inch screen.

Portable Saw Rolls to the Job

WILLIAM M. MURRAY & Son, builders in Landis Valley, Pa., rigged up this trailer to haul a radial saw to job sites. The traveling shop pulls up in front of a house, and two men tote the 200-pound power tool from room to room

By Col. Bernt Balchen

Europe in two hours, in a glass airliner cruising 20 miles above the earth, may be a routine flight in the year 2000.

THE speed of future airliners will be determined by

ally, because there is a limit to the acceleration a human being can take

without blacking out.

Descent and landing will also require a reasonable time. Presumably, take-off and landing together may take 45 minutes, while the flight itself will take only an hour.

To do this, aircraft will fly at 2,000 to 4,000 m.p.h.

Such speeds are likely to be the most common speeds for "short" trips, like the hop between London and New York. On a longer flight, say from Montreal to Rio de Janeiro, which could also be flown in

approximately two hours' time, cruising speed will be close to 8,000 m.p.h.

how fast the passengers can be accommodated in comfort. It will be hard to cut flight time between London and New York to less than 1% to two hours. Take-off and climb to cruising altitude must be carried out gently and gradu-

The author

When Bernt Balchen talks about flying, he speaks with the authority of 30 years as a fiter. He is also an old Arctic hand who has winged often over the top of the world. During World War II he commanded a farnorth U.S. air base. He is now Arctic adviser to the Air Force. This article is from his new book.

Convertiplanes for short trips. New York to Washington takes one hour today and will probably never be cut to less than half of that. The aircraft used will not climb to very high altitudes. It may pay off to use slower convertiplanes, in order to be able to land in the downtown areas. You and your friend may board two airplanes in New York and leave for Washington and London, respectively, at the same time. The moment you hit the runway at National Airport your friend is being requested to fasten his safety belt and his plane is beginning to glide down toward the London airport.

Longest trip-two hours. No long-distance flight in 1980-90 will take more than a couple of hours, in all probability. The greatest distance on earth is halfway around the globe at the equator, 12.541 miles. An airplane flying at 8.000 m.p.h. and requiring 30 minutes for take-off, climb and landing will make it in two hours. That may be the

hmit as far as commercial planes are concerned, but pilotless missiles and military fighter planes may fly even faster.

Such great speeds will confuse passengers because of differences in local time. If you leave London after breakfast at eight o'clock, you will arrive in New York at five o'clock the same morning and have to wait three hours before your friends eat the meal you had five hours before. The best schedule might be to leave London around midnight and arrive in New York "yesterday" at nine o'clock in the evening. If you go to a 10-o'clock show on Piccadilly before you leave, you can still make another 10-o'clock show on Broadwayand go to bed about the same time that you left the London airport!

Vonstop anywhere. Planes capable of these speeds will fly nonstop between London and New York without refueling. Today, U.S. bombers can fly direct from the United States to Tokyo; tomorrow, or let's say 30 years from now, the need for a refueling stop will have

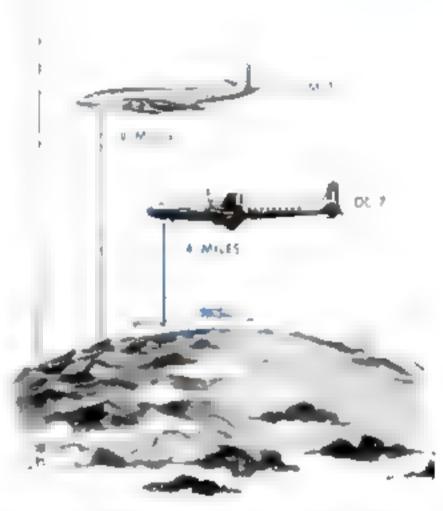

been eliminated altogether. All flights will be point-to-

point, whether from Africa over the Antarctic to New Zealand, or from New York over the Arctic to Hong Kong.

The number of passengers accommodated on these flights might be in the neighborhood of 300. This, however, depends more on the traffic demand than the ability of the airplane manufacturer to build large planes.

As a parenthetical thought, I hope

Flight at thousands of miles an hour will take place at great altitude—possibly 100,000 feet—where air is extremely thin. Otherwise, air friction would make the plane too hot to live in, even with artificial cooling. Most airliners today fly at 20,000 feet or below, though jets go over 40,000.

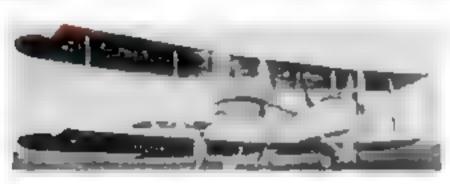

Distance will mean nothing

It will make little difference whether you fly from San Francisco to New York or San Francisco to London. Time spent in level flight will be about the same. The time-consuming parts of the trip will be the climb to, and descent from, the selected cruising altitude.

Transport planes shrink the ocean

1919

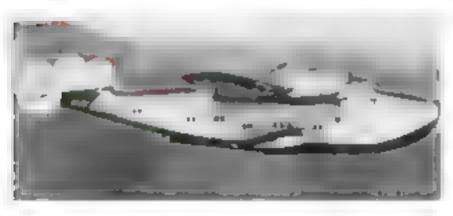

Alcock and Brown flew nonstop from Newfoundland to Ireland, some 2,000 miles, in 16 hours.

1927

Lindbergh made first and

Lindbergh made first New York-Paris nonstop flight—3,600 miles—in 33½ hours.

1939

First passenger service required intermediate stops. Flight of 3,460 miles, New York-Southampton, took 34½ hours.

we will gain toward simplicity in customs and immigration regulations. There isn't much sense in flying from New York to Tokyo in two hours if the customs, immigration and passport people are going to hold you up for an equal length of time—longer, actually, than it will take you to travel halfway around the globe.

Flying iceboxes. Tremendous research work is required to bring about such fantastic speeds. An airplane flying at 8,000 m.p.h. must resemble a flying icebox because of the friction heat. Flying at 4,000 m.p.h. with today's planes would cause the fuselage to hit

a temperature of 1,500°. Skeptics claim that it is impossible to insulate the cabin and the entire plane against such temperatures. However, they seem to forget that aircraft like the passenger planes of 1990, flying at speeds five times that of sound, will operate at such speeds only in extreme altitudes, where the air is so thin that friction will have a much lesser effect. The heat may rise to 200° while the aircraft climbs at more than 1,000 m p.h., but it will drop substantially if the plane cruises at 100,000 feet, where the air pressure is 0.2 pounds compared to

While these temperatures do not offer insurmountable barriers, they will still be difficult to overcome. Certain alloys can stand constant heat of hundreds

a pressure of 14.7 at sea level.

and thousands of degrees But aluminum alloys can't take very much. Improvements in the fields of metallurgy and insulation, with new materials and lubricants, will be necessary to produce the "guts" of these hermetically sealed "flying iceboxes" of the future.

Eren glass rivets. The exteriors of these superplanes

will be made of glass. The plane will have a glass fuselage, glass wings, glass ailerons and glass stabilizers. Even the rivets will be made of glass.

Phenolic-resin-impregnated glass-fabric materials show practically no loss of strength at the temperatures mentioned above, and maintain half of their

mechanical properties even at temperatures around 500°. (Aluminum or magnesium alloys lose much of their strength above 300°) It is also possible to laminate woven-glass fabric with various silicones, which are heat-resistant. Using these materials, the whole airplane can be molded, and production will be simplified and made less costly.

The major structural members will be of stainless steel, titanium and other heat-resistant metals.

Stainless steel can be exposed to extreme temperatures without loss of its mechanical properties. But steel is heavy,

and thus only the most important members in fuselage and wing will be made of this metal. Titanium, on the other hand, is light, besides having a good strength-weight ratio and heat-resistance. Titanium will be used extensively also because of its ability to resist dy-

namic creep resulting from tension and torsion.

Helium to cool surface. Good results in cooling aireraft may be obtained. I think, through the use of liquid helium. Helium, which has a boiling point close to absolute zero, might be pumped out to flow over the surface toward the rear of the craft and then vaporize. This should provide very effective cooling for the short periods of time

while the aircraft accelerates up to the outer layers of the atmosphere, where

little cooling is required.

The high temperatures and speeds encountered in tomorrow's flying will also require different lubricants. We may be using dry lubricants in these aircraft.

We will have to improve our engines and fuels substantially. Regular jet engines can be used for speeds up to two or three times that of sound. But at 2,000 m.p.h, hydrocarbon fuel will begin

to boil. Also, at altitudes of 100,000 feet or more, there is very little oxygen for the jet to swallow,

Ramjets will give speed. Airliners of tomorrow may have powerful turbojets for take-off and slow landing speeds, while ramjets take over during normal flight, giving fabulous cruising speeds.

I think that there is a great future in nuclear energy,

but I believe that there is a lot to be done in the field of jets and rockets with improved fuels and less complex engines. I predict that we will experience a rocket age, commencing during the latter part of this century.

The rocket represents the optimum of simplicity, and unlike any other heat

simplicity, and unlike any other heat engine, the rocket is not dependent on the surrounding air. In fact, the rocket will perform better in a vacuum, where there is no air resistance.

1954

Today's piston-andpropeller airliners span Atlantic in 12 hours. More powerful versions will better this before year's end.

1955-56

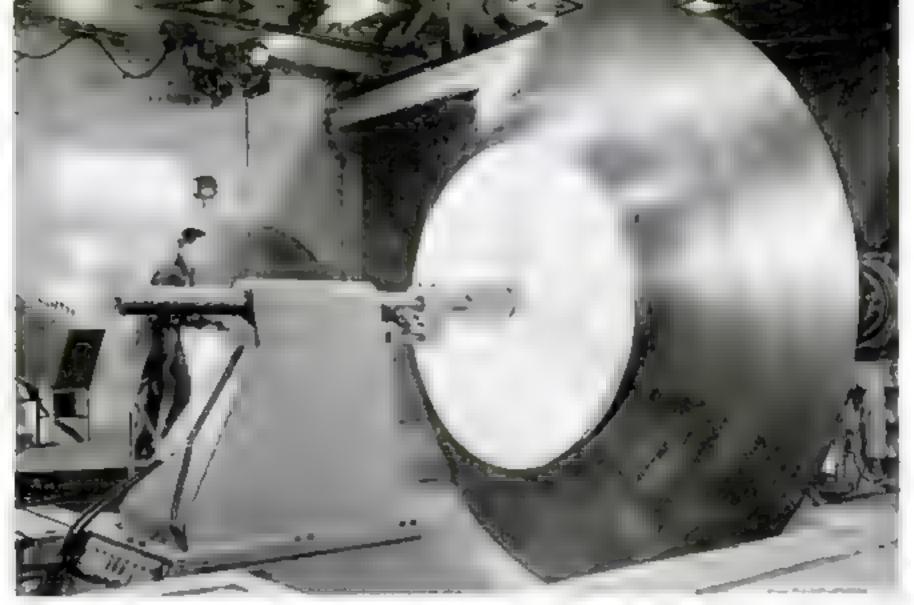

Soon, perhaps next year, jet airliners will fly the ocean in as little as six or seven hours.

2000

In the next half-century, transatlantic airliners will cross in 1½ to two hours.

Largest Spinning Lathe Twiris Sheet Metal into New Shapes

AFTER pushing buttons, a workman just stands by to watch while this huge spinning lathe forms flat sheet metal into a 14-foot dome. Hydraulically controlled, it

has a 50-horsepower drive and a 180-inch swing. The Phoenix Products Co., Milwaukee, built it to spin huge shapes for air-conditioning equipment and industrial machinery

TV Actors Wear New Mike

A TELEVISION actor can't get out of microphone range with NBC's new mike—he wears it concealed in his clothing. It is booked to a tiny radio transmitter, made with transistors, which relays his voice to a studio antenna that feeds the station transmitter.

Hood Air-Conditions a Tractor

THE Air-Brella on the farm machine above cools as well as shades the driver. Air drawn in by a fan at the top flows down the sides, swirling around the farmer but never blowing directly on him. It is made by the Farmhand Co., Hopkins, Minn.

How Hi-Fi Records Are Made

New mikes, magnetic tape, a hot stylus and hotter technicians make the listener feel he's actually sitting in a concert hall.

EVER since Carnso first bellowed down a tin horn to give the world a faint idea of the grandeur of his voice, the making of phonograph records has involved compromise

The degree of compromise between hye and "canned" music used to be ludicrously wide. But now, hi-fi records have nearly closed the gap

Perhaps the biggest share of credit for this improvement in the music in your home goes to magnetic tape and the industry-wide use of feedback cutters.

All major recording companies now begin the creation of a record by capturing live music on 2,400-foot reels of magnetic tape, running, in most cases at the fixed speed of 15 inches per second. These tape "masters" are capable of reproducing the original sounds with nearly complete faithfulness

The feedback cutter permits the re-

1 THIS MAN IS "MIXING" MUSIC for a master tape recording. This left hand is working controls that regulate the volume of the five

microphones picking up the orchestra's sounds. The mixing panel provides controls for as many as 10 nucrophones, which sometimes are needed

2 A "PLATTER" REGINS LIFE at M-G-M Records. Music from the master tape on the

machine at far left is being transferred to the master disk, on the recording lathe at far right.

cording of peak volume with minimum distortion and maximum consistency.

Another recent invention, which stands between the recording orchestra and the master tape, is of vital importance to the making of hi-fi records. It is the condenser-type microphone. Its name derives from the fact that its vibrating diaphragm acts as a condenser. This microphone more exactly reproduces sounds—especially in the high frequencies, from 15,000 cycles per second on up—than any other yet made.

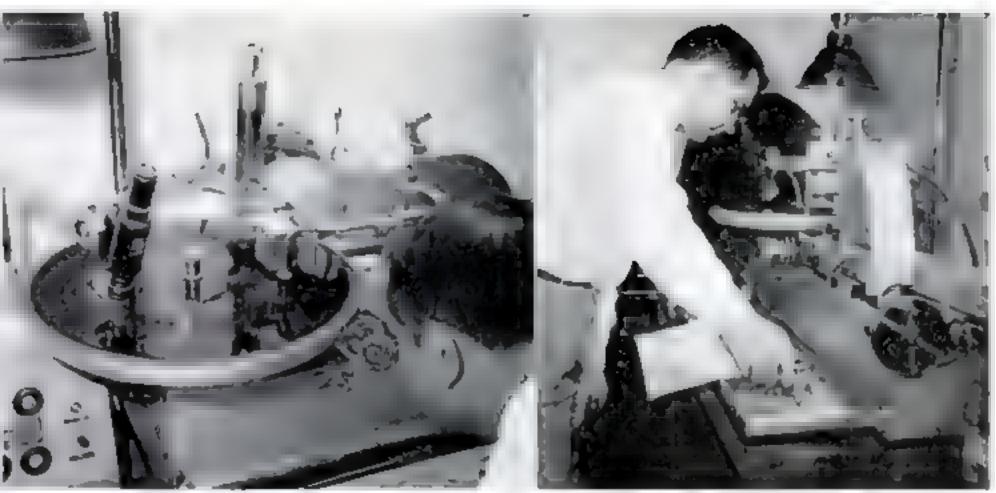

Then, there is the equalizer, an electronic device that enables a skilled operator to boost or reduce low, middle or high frequencies coming off the master tape. In this way, as the music is transferred to a master disk, he can help make up for deficiencies of recording due to faulty placement of microphones in the recording studio.

Hot Stylus Cuts Like Hot Knife

A fourth valuable contributor to the making of hi-fi records is a thin heating wire. It has been wound around the cutting stylus, which etches sounds on the surface of the master disk. Six volts of current are applied to this wire when the stylus is at work. The result is, in effect, to sharpen the stylus, so that it does a cleaner job, just as a hot knife does a neater job at cutting gooey cake. Sharper cutting of records makes for less distortion in reproducing the sounds on them and reduces surface noise.

Until fairly recently, recording equipment was better than the phonographs available to play what it produced. Technicians could afford to be somewhat carcless. No record buyer would ever hear the difference. Now that the number of people owning sensitive hi-fi sound-reproducing systems is growing at a dazzling rate, every recording technician must be on his toes as never before. Any slipshod work will be painfully evident to a multitude of ears. Every hi-fi record starts its journey to the public's jukeboxes and living-room phonographs in a scientifically designed studio.

In a soundproof control room outside the studio, behind a wall of clear glass, a man called a "mixer" blends musical ingredients as the musicians record their work on the master tape. He controls the volume of every mike from where he sits,

3 cutting a master bisk for a 12-inch longplaying record. The curving tube at right is a suction pipe, collecting "chip" from the cutting stylus, mounted next to it. The microscope is calibrated for checking the dimensions of the grooves being cut.

4 "VARYING THE PITCH" doesn't mean changing the key of the music being recorded. It means changing the number of grooves being cut per inch. Soft music can be crowded into less space than loud. This operator follows a musical score to see which is coming next.

and it is his aim to balance them so that the over-all effect is what the composer or arranger had in mind.

If a clarinet reed suddenly makes a noise like an indignant peacock, or a singer develops a frog, then the players repeat that passage. This will go onto a second tape. Several are made before the musical director is satisfied.

Snip Go the Bloopers

In the recording company's diskmastering room, a technical expert later snips the "bloopers" from an otherwise excellent tape and replaces the cut-out sections with corrected strips from the other tapes. When he has a thoroughly corrected master tape, he first listens to it through a playback amphifier. He makes note of where he must use his equalizer to improve on the mixer's work. Then he is ready to transfer the music from the master tape to the master disk.

The disk, a lacquer-coated circle of aluminum, lies on the turntable of a recording lathe. This machine is a highly intricate and accurate overhead lathe, able to cut very fine grooves, about three mils (three thousandths of an inch) wide.

5 CHECKING THE RESULTS of his exacting work, Clair Krepps, M-G-M's technical director, compares the sound of a test pressing from a master disk with that of the master tape.

The cutting stylus, mounted over the turntable, is a specially ground sapphire. Its tip has a radius of one-quarter mil

When a record is being cut, the stylus moves across the face of the disk at a rate determined by the variable-pitch control. This control, which the operator works by hand, governs the number of grooves the stylus cuts per lateral inch.

Odd Racing Yacht Designed By Physicist

THE strange plywood sailboat at the right, looking like a floating helicopter, was designed by an English physicist and vachtsman. It has a diminutive cockpit, rotating booms of a light alloy for its 260 square feet of canvas, and a 20-foot mast of the same metal.

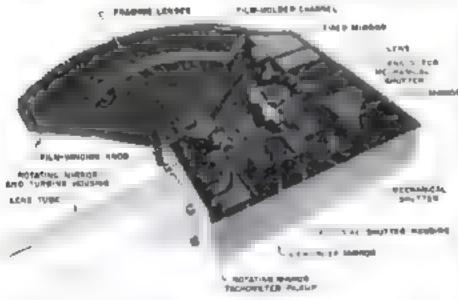

British Spud Picker Scoops Dirt and All

LIFTING five tons of soil a minute as it moves through potato fields, this new British harvester runs the spuds gently through rubber "fingers" and separates them from the dirt in which they grew. The machine harvests four acres of potatoes a day.

Fastest Camera Now Speeded Up to 15,000,000 Frames a Second

The famous high-speed camera revealed in 1952 by the University of California's Los Alamos Scientific Laboratory has now far outdone its original fantastic pace. Two years ago, it took 3,500,000 frames a second. Now, in an improved model, shown inside and out above and at right, it takes 15,000,000 frames a second on standard high-speed 35-mm. film. It is used to study the phenomena of explosions.

'55 Pontiac Is New

With a tricky 1-8 buzzing under her bonnet and a flashy fall get-up to match, you'd hardly recognize the old girl,

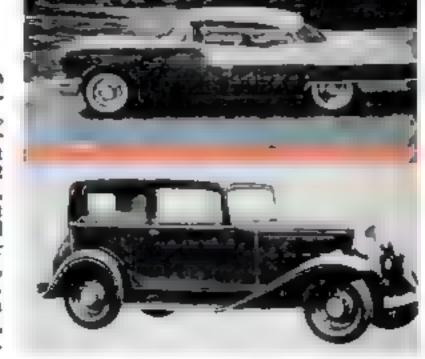

All Over

By Devon Francis

PIRST PONTIAC V-8 in 23 years is quite a contrast to the last V-8, pictured below it. Replaced by a straight eight a year later, 1932 car had 83 horsepower, an engine displacement of 251 cu. in. It sold for \$945. Pontiac for 55 has 180 horsepower, displacement of 287 cu. in. New hard-top, with all the extras included, costs more than \$3,000.

AT THE Pontiac automobile factory some miles north of Detroit they are fond of passing around a picture showing a brace of paper cups full of water resting on the open door to the glove compartment in the 1955 edition of the car. The inference is clear—this vehicle rides so smoothly that the water won't spill.

That's not quite true. The riding qualities of the new car, announced to the public late last month, aren't that good. But they almost are,

The suspension is new. So is everything else in this car for the new model year. The transformation in Pontiae hasn't been matched, for completeness, since 1935, when the company reintroduced their six-cylinder job after a hiatus of three years.

Low-Down and Fancy

Partisans of the Pontiac—and this belligerently loyal tribe is numbered in the millions—will hardly recognize the old girl in Main Street showrooms. She's lower and, interestingly enough, a wee bit narrower. In the Star Chief, one of the two lines, she's shorter, too The windshield wraps around. On the fancier models the bodies are two-toned below the window sills. And under the hood is a spanking new engine. Lake most new engines introduced

OVER-SQUARE ENGINE, with overhead valves in contrast to yesteryear's L-head power plant, has hydraulic valve lifters.

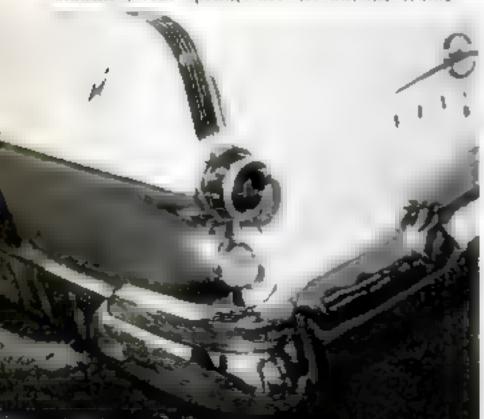

LOWERED ROOF, like those on all recent cars, makes the tall fellows duck cautiously to get us. This six-foot-three chap has 5½ inches of head showing above drip molding.

BRAND-NEW PANEL features a centered glave compartment. Hood line is down 3²4 inches for better driver visibility. Recirculating-ball type steering helps cushion road shocks.

51LVER STREAKS, almost as familiar a Pontiac trademark as its Indian, serve as rear tender moldings. Two-tone bodies are optional For stability, rear springs are set outside frame

these days, it's an overhead-valve V-8. It looks conventional. It is, almost, Yet the designers have introduced a couple of tricks that may be copied in other automotive quarters within the next year or two.

One of them is a reverse-flow cooling system. The water comes from the radiator through the top of the engine, past the valves, before it enters the block to cool the cylinders. There is a good and simple reason for this. The hottest parts of an internal-combustion engine are the exhaust valves and their ports. Fifty years of metallurgy have gone into the improvement of valves in gasoline engines to prevent warp, wear and loss of compression. The problem became so acute in aircraft engines that sodium-cooling was resorted to.

Cool Water Means Longer Valve Life

By bringing water at its lowest temperature, fresh from the radiator, directly to the valves, the Pontiac people think they have hit on a way to assure longer valve life, better gas mileage and, for the owner, fewer trips to the repair shop to mend the damage caused by burns in cylinder heads.

Even the crankcase-ventilation system is designed to keep the valves cool. The air circulates over the valves and the timing-chain cover and then washes down around the pistons.

A second trick in designing the new engine was to do away completely with the valve rocker-arm shaft. The arms teeter-totter under the thrust of the push rods and valve springs on study that grow out of the cylinder head. The reasoning behind this was that separate mountings would minimize the ills of sidewise cocking and binding that OHV engines are prey to. This should reduce valve-stem wear and, in passing, make the valve system easier to service.

Old Engine Was Outdated

Pontiac will be bragging about the new 180-horsepower engine for months to come. They should, It was overdue. While overhead-valve V-8's were popping up these last few years all over the automobile world like mushrooms after a rain, Pontiac worned along with its outdated (and let's be fair, rugged, too) L-head straight eight. In some of its versions, notably that of two years ago, you had to lash the Pontiac Eight with a buggy whip to get it past a filling station. The engine was beginning to rebel against increases in compression, and pulling even a modest 127 horsepower out of it took a tidy bit of engineering wizardry.

Now the old engine is a memory. The new one, the first V-8 in this automobile in 28 years, leaves the owner with nothing to be ashamed of on getaway and passing ability at today's smart turnpike speeds.

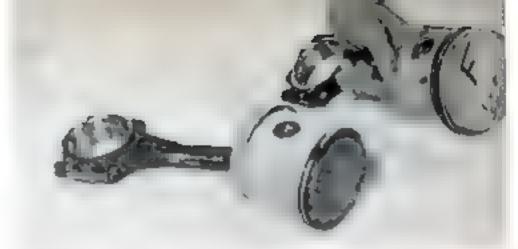

Acceleration Figures Are 'Way Up

This is how the comparative accelerations, old and new, stack up:

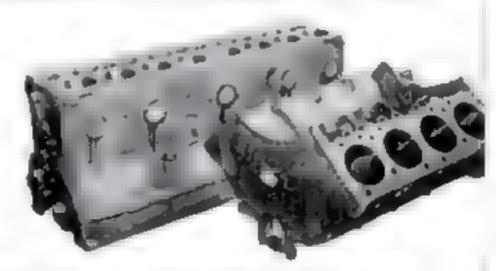

> 0 to 40.....(seconds) 7.5 6.3 0 to 60.....(seconds) 16.8 12.8

There is another fine point about this new engine that can be gleaned from what Pontiac, with refreshing candor, refers to as the "brag book," a rose-tinted engineering evaluation of the 1955 car. That's the peak torque. Torque, the thing that puts push in the rear wheels at the critical moment, can be moved around, within limits, to peak at various

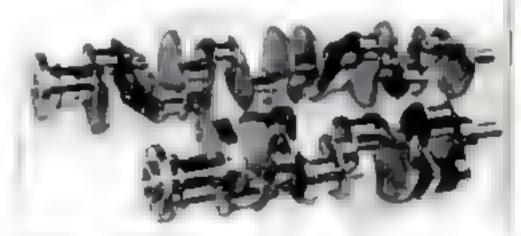

[Continued on page 252]

SKIRTED PISTONS replace box type (in front). Oil ring has been moved from bottom to groove just below compression rings in top. Inside diameters of con rod bearings are up 44 inch.

OLD BLOCK (in rear) was 33% inches long and 11% inches wide. New one, with a bore almost a half-inch bigger, is only 22 inches long but is just shy of being seven inches wider.

HUSKIER CRANKSHAFT (front) in new car is only 25% inches long. The old one measured 38 inches. Slight overlap to throws and main bearings stiffens the shaft and prevents whip.

FACTS ON '55 PONTIAC

Model: Star Chief Custom Catalina.

Engine: 90° OHV V-8, 180 hp. at 4,600 r p.m., compression ratio, 8 1, piston displacement, 287 cu. in., piston travel (in feet per car mile at 20 m p.h.), 1,223, bore and stroke, 3%" by 3%", crankshaft bearing surface, 41.5 sq. in.; torque, 264 lb.-ft. at 2,400 r p.m.

Weight: 8,804 lb.; per hp., 21.1 lb.

Transmission: Hydra-Matic (optional); rear-axle, 3 08-1.

Steering ratio: 25:1; radius of turning circle, 21' 3".

Effective brake-lining aren: 179 sq. in. Springs: front, coil; rear, semi-elliptic.

Outside dimensions: height, 60%"; overall length with bumpers and guards, 210%"; width, 75%"; wheelbase, 124"; overhang, front 32%", rear 53%", tread, front 58%", rear 59".

Inside dimensions: seat-cushion width, front 61%", rear 64%"; leg room, front 42%", rear 37%"; headroom, front 34%", rear 34", seat height, front 13%", rear 12"; vertical distance, steering wheel to seat cushion, with seat in mid-position, 5.1"; front-seat adjustment, horizontal 4.4", vertical %".

Tire size: 7.10 by 15.

Price: About \$2,900 with automatic transmission, power steering, power brakes; taxes and freight extra.

Truck's Vacuum Fan Cleans Out Ash Bin

THE machine has taken over another of man's messy chores: hauling out the ashes. This truck, shown in action in Brattleboro, Vt., backs up to a house, its driver connects hoses to basement tube terminals, and a vacuum fan in the truck, running off the engine, inhales the ashes.

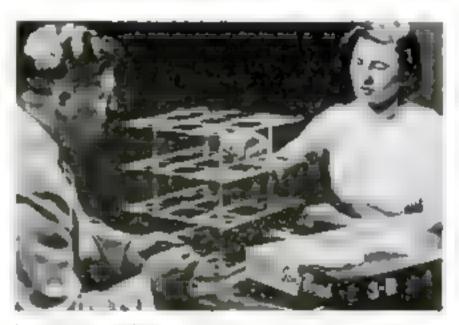

Door-Jamb Guards Protect Fingers

Forner strips of a Bakelite plastic (above), anchored with metal molding to a door and its frame on each side of the dangerous hinged edge (left), protect children's carelessly straying fingers and grownups too. The door-jamb covers, colored thimmoun gray, are made by the Stanley Works, 195 Lake St. New Britain Conn. They come in various widths and are designed to be installed on practically any door of wood, metal or glass, whether hung on hinges or on pivots.

AA Gun Has Two Miles of Wire

THE woman worker above is checking the 2,800 electrical connections, involving two miles of wire of 40 different sizes, in the fire-control system of the uncanny U.S. anti-aircraft gun called the Skysweeper. Radar and an electronic computer aim it.

Ticktacktoe Adds a 3-D Touch

THAT fascinating old time-killer, Tick-tacktoe, has taken on a third dimension with the introduction of Four Straight, a version of the game that is played on four levels of clear plastic (above). Tedeo, Inc., 5201 Cameron Rd., Austin, Tex., makes it

V-8 Gives Chevrolet 162 Horsepower

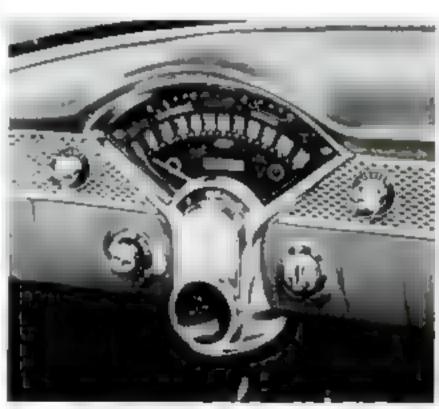

Sixes get a boost, too, as striking changes in body design give the 1955 models a big-car look to go with their power.

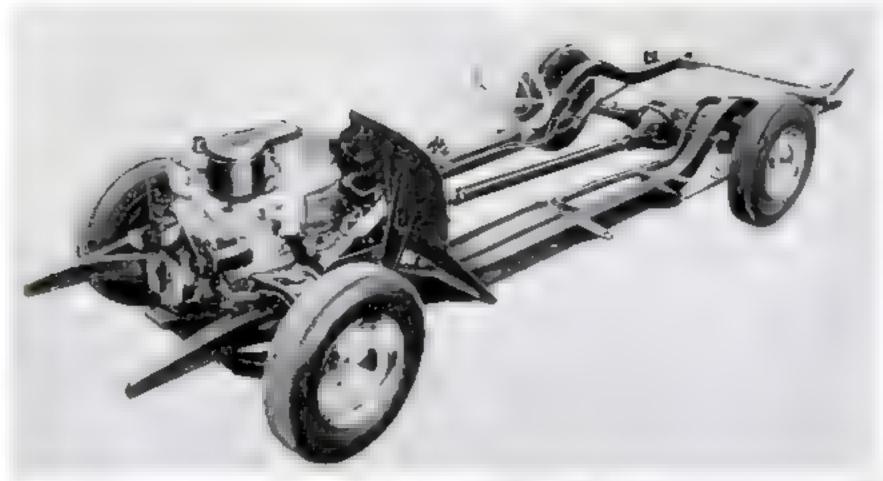

ITH its first V-8 engine in 35 years and an impressive big-car look, the 1955 Chevrolet made a dashing entrance onto the automotive stage the last week in October.

The new valve-in-head V-8 puts out a blistering 162 horsepower, 37 horses more than Chevrolet's huskiest six of 1954 could muster. The car it drives comes equipped, for the first time, with tubeless tires and a 12-volt battery. Even air conditioning is available for the V-8 line.

An obviously lower silhouette—the sedan is 2% inches closer to the ground than before, the station wagon as much as six—makes the new Chevrolet look longer, although the wheelbase is un-

RED WARNING LIGHTS have replaced the ammeter and oil gauge on the new Chevvy instrument panel. On Powerglide models, the quadrant is mounted just below speedometer.

changed for 1955-it's still 115 inches.

There are certain GM family traits in the features of the '55 Chevvy—the tapered doors that made their debut on the first Buick Skylark (PSM, Oct. '52, p. 100), the vertical windshield pillars, wrap-around windshields and high, straight fender crowns that became familiar sights on recent Buicks and Oldsmobiles. Its hooded headlights are an inheritance from various GM dream cars of the past two years. Then there is a hint of its own Chevrolet forebears in the neat, small, rectangular radiator grille, strongly reminiscent of the first Corvette's (PSM, Mar, '53, p. 166).

Hot-and Can Be Even Hotter

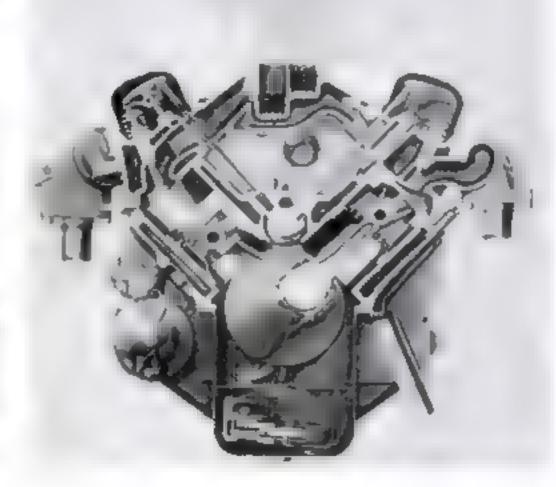

The compact new Chevrolet V-8 engine, called the Turbo-Fire, has a compression ratio of 8 to 1, as opposed to the 7.5-to-1 ratio in both 1954 sixes. Its displacement is 265 cubic inches, up 30 over that of this year's engines. It has a hore of 3.75 inches and a stroke of 3 inches, shortest in the industry.

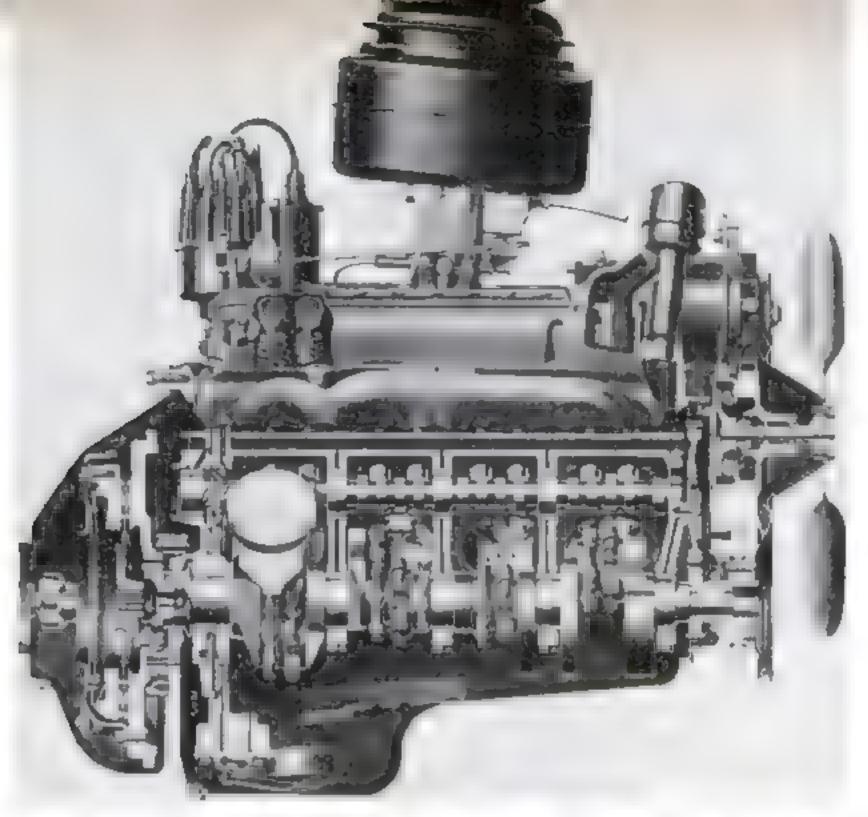

For the restless owner who is not wholly satisfied with his V-8's innate 162 horsepower, there is available a package deal, consisting of a four-barrel carburetor and dual-exhaust system, that will boost the horsepower to 180!

In addition to the V-8. Chevrolet con-

auggep, accrangular Frame of the 1955 Chevrolet is said to be 50 percent more resistant to twisting than the 1954 version, though 18 percent lighter. A six-cylinder engine, with side-mounted air cleaner, is shown above.

cross section of new V-8 shows the innards of a type of engine with which Chevrolet has experimented since 1917-19, though this model was basically redesigned within the past three years. It combines a very short stroke with a bore unusually large for engine's length.

UNUSUAL COMPACTNESS of the 162-horsepower V-8 engine is evident in this cutaway drawing

of its working parts. The earbureter is of two-barrel design and has an automatic choke.

tinues to offer two sixes. Both have had their power boosted for 1955 competition. The six-cylinder engine that comes with conventional gearshift now has 123 horsepower, an increase of eight over the 1954 figure. The six built to go with Chevvy's Powerglide automatic transmission has been upped to 136 horsepower, 11 better than last year's output.

For the first time, on request, Chevrolet will install overdrive, which automatically cuts in above 31 miles an hour when the driver takes his foot off the accelerator.

As a natural result of providing what Chevrolet calls a "sweep-sight" windshield, front-seat visibility in the 1955 cars has been increased—by 19 percent. In the four-door sedans, with every window larger than ever, there is now 24.5 square feet of glass area.

NEW FRONT SUSPENSION cancels most of the "dive" in sudden stops. This cutaway shows how coil spring of knee action nests into frame.

Robots Turn Out Printed-Circuit Television Sets

IN SECONDS, the automatic production line at left assembles half a TV receiver's charsis—the circuit board the girl is showing, bottom and top, in the foreground. The cost-lowering method makes possible a \$150 set with 21-inch picture tube and 18-tube chassis. Used by Admiral for two new vertical-chassis table models, it is based on a printed circuit. From a drawing of the circuit, below, a

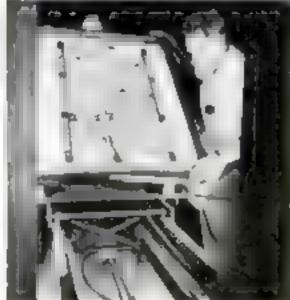

Photo-etching reproduces the pattern on metallized-plastic circuit boards. Then each hoard passes down the as sembly line, where high speed robot machines insert 50 resistors and wire numpers hinal hand work requires more employees than before, to keep up with the robots

Callers See Each Other on TV Phone Introduced for Business Use

IV PHONES can now identify bank and department-store enstormers and their signahires, and interview visitors seeking admittance at plant gates. At each end a screen shows both parties (right), or its full width may be used for documents, in a compercial system introduced by Kay Lab, San Diego, Calif.

Two-Engine Hot Rods Drive for 300 M.P.H.

Souped-up twin power plants in specially designed bodies edge closer to dazzling goal.

AMERICA'S most free-wheeling automobile designers, the back-yard mechanics who build racing hot rods. have launched their grand assault on a fantastic speed mark. Their goal: 300 miles an hour. Their weapon: two engines in one chassis. This fall at the annual National Speed Trials on the glistening 11-mile salt flats at Bonneville. Utah, six twin-engine streamliners, shown here and on the next two pages, roared at peak power toward the goal. One of them, Chet Herbert's twin-Dodge hot rod, came close. It unofficially passed 260 miles an hour when the timing lights failed. Two watchers clocked it at 270.

Mercs End-to-End on a '39 Ford chassis powered this entry belonging to Bob Moll, a meat salesman, and Melvin Hales, a building contractor. Moll owns the front engine (12.1 compression ratio), Hales...

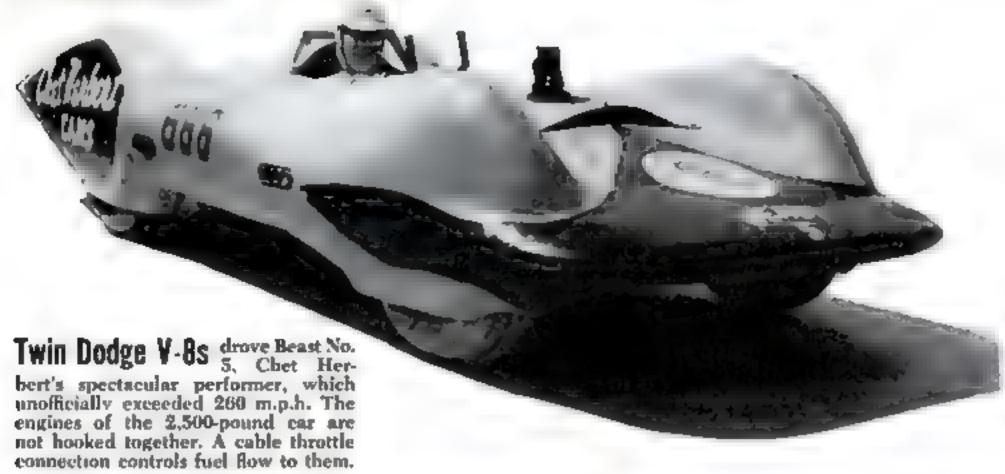

... the rear (10:1 compression ratio). The glassfiber body (above) weighs only 200 pounds, can be installed in two minutes. The entire car . . .

... which set a new record of 183.63 m.p.h. for the two-way run, weighs 2,300 pounds. Lap belt, roll bar and helmet protect the driver.

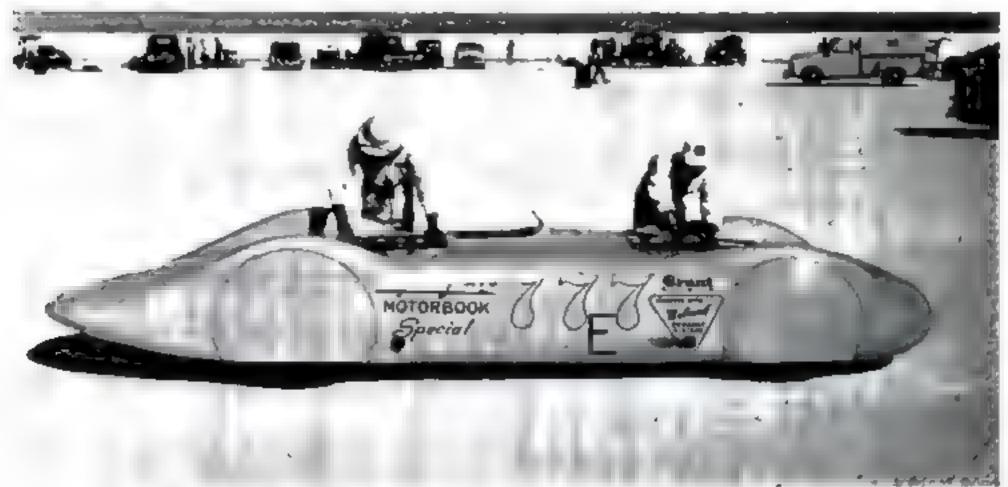

Modified '32 Ford coupe packed a pair of stock Chrysler V-8s. Running on pure alky, they develop 650 hp. at 5,200 r.p.m. Engines, at front and rear, are linked by a shaft housed in the torque tube.

Twin Mercs drove Mickey Thompson's \$7,000 coupe, which weighs only 2,480 pounds. The engines are connected by a chain coupler. The front engine kicks out 310 hp., the rear engine 285 hp., at 5,300 r.p.m.

Two Ford V-8s with four-wheel drive sent the kenz-Leslie streamliner through timing traps at 256 m.p.h. one way. Each engine operates independently through push-pull rods from a single throttle. Two airfoils help keep rear end down. END

lke's Car Lets You See Him Through Roof

Even when it rains, crowds waiting to see the President ride by can get a good view of him through this plastic shelter. Suggested by Ike himself, the knockdown roof fits inside the trunk of the parade car when it is not in use. A new interior light illumines the Lincoln at night.

Britain Tries Out Midget Jet

This bantamweight jet fighter is the Folland Midge, one of the world's smallest fighters. It is said to have low engine power, but it boasts a speed of more than 600 miles an hour. A British experimental aircraft, it carries no armament as yet.

Portable Incubator Paces Stork

These ambulance attendants are loading a portable incubator, on a litter, aboard to rush it to a premature baby born away from the hospital. It has a heating and humidifying element that plugs into any electric outlet. An oxygen tank goes with it.

They Say Now.....

JOHN V Shorond at 1000 MISSILE ENCINEER "Supersome speeds and extremely high altitudes have put man in such an unnatural environment that he no longer is able to cope with the problems,"

CRAWFORD H. GREENEWALT, PRESIDENT, Du Pont Co.: "In the 50 years during which we have practiced applied science... we have made only the smallest of forward strides, and the horizons before as are unlimited..."

Lewis L. Straiss. Chairman. U.S. Atomic Energy Commission: "We are not yet at high noon of the atomic age—only at the first glimmer of its downing."

Dr. E. D. Admian, president, the Royal. Society: "The human race cannot stand more than a few thousand large atomic explosions whether they hit the target or miss."

DR. MONT A. CAZIER CURATOR, DEPT. OF INSELS AND SPIDERS, AMERICAN MUSELM OF NATURAL HISTORY: "We have great difficulty living with the insects, but at the same time we cannot do without them."

BLACK-AND-WHITE SET? No, this compact cabinet with the 21-inch picture is a new RCA color

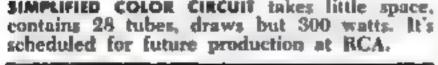

receiver. White line indicates size of the 15inch screen used in last year's color models.

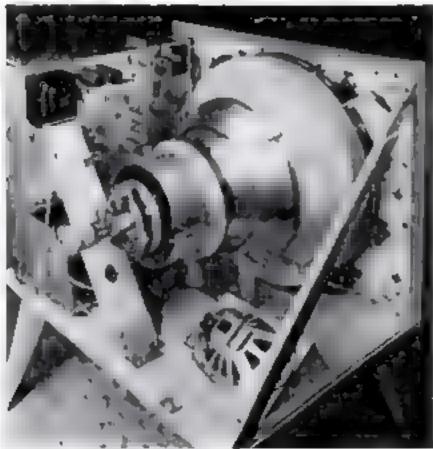

New Color TV Is Bigger and Cheaper

THE new color-television sets look like television sets at last, instead of brilhant peepholes in huge boxes. The pictures are big-19 or 21 inches. The cabinets are small, some no larger than those on equivalent black-and-white receivers. And prices are down a bit: under \$900, with a drop to \$500 forecast. The color they reproduce is excellent, in the opinion of observers at recent press showings. A few of these new models are in the stores now, but the most radically changed sets won't be available until '55.

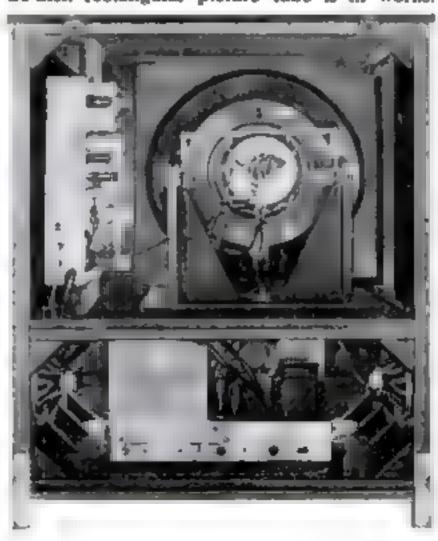

The networks have scheduled 100 hours of color shows for this season. These will be special "prestige" productions and color versions of the most popular regular programs.

SIMPLIFIED COLOR CIRCUIT takes little space, scheduled for future production at RCA.

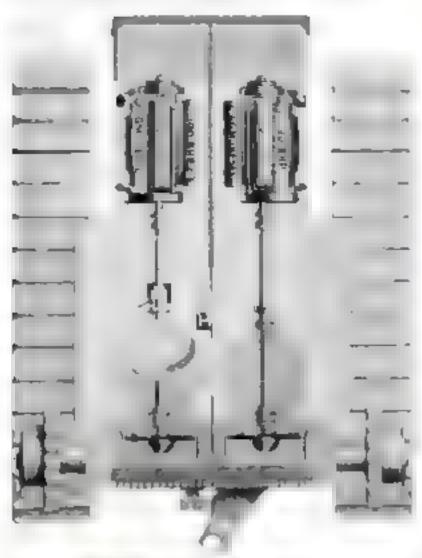

CONSOLE WITH TWIN SPEAKERS, in production at CB5-Columbia, has 19-inch screen. Set with 21-inch rectangular picture tube is in works.

New Twin-Diesel Tractor Has 380-Horsepower Push

THE eight-m.p.h. top speed of this 26-ton beast won't win speed laurels, but its two 190-horse diesels are leading in the horsepower race—it has, its maker says, twice the power of current big tractors. Twenty such experimental crawlers are being made by GM's Euclid division for road building, open-pit mining, and logging. Each engine drives a single track; you can steer with throttles, transmissions or brakes. Hinged radiators are out in back, so's not to heat up the driver.

44 POPULAR SCIENCE

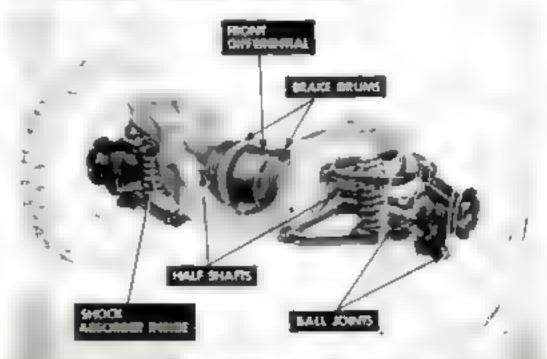

BELGIAN BLOCKS AT 50 M.P.H., pure murder in the older vehicle, are just a mild massage in new one. Its wheels do far less hopping.

Fast New

NO LONGER the chiropractor's delight, the Army's quarter-ton utility vehicle threatens to become as smoothriding, and nearly as peppy, as a '55 sedan.

That is the prospect suggested by a handful of experimental vehicles built for the Ordnance Corps by Ford. (In redesigning the jeep, Ford ducked the name problem—"jeep" belongs to Willys—by drably christening its vehicle the "XVI-151." For simplicity could we call it the "Forp?" No? How about "Feep?")

FRONT END, hung on a sturdy steel pressing, can be unbuttoned fast as a unit, or disassembled in bits. Vehicle has had elaborate stress analysis plus much hard testing.

OLD AND NEW look superficially alike, though the "Feep" (right) is slightly lower, with shorter body on longer wheelbase. Note difference

in front suspensions. Reduced weight, achieved in part by integral frame and new suspension, permits easier air drops.

"Feep" Even Rides Well

The Feep weighs 2,140 pounds, almost 600 less than the current job, despite a four-inch increase in wheelbase and a complete absence of aluminum or magnesium alloys. Height is down five inches but ground clearance is slightly increased; over-all length is 7.3 inches less, but cargo space is 26 percent more; power is up slightly (to 71 hp.) but cruising range is 30 percent greater. A four-cylinder overhead-valve engine makes it go.

The new vehicle has an integral,

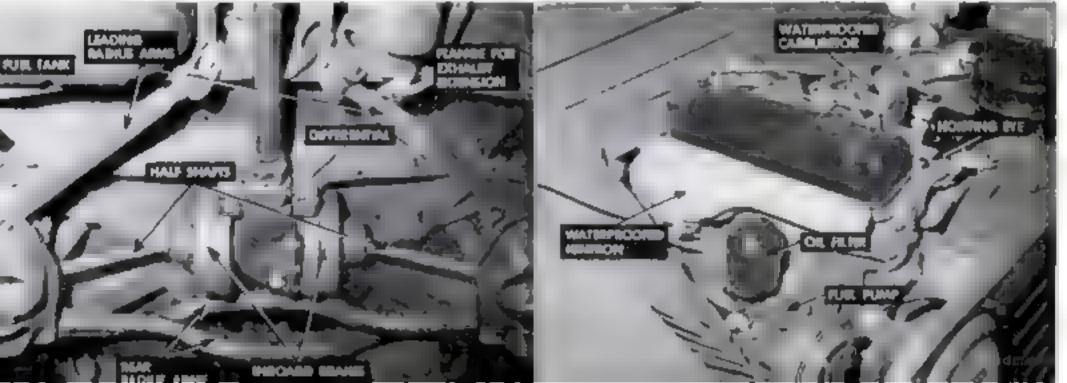

BACK END from underneath shows control arms that locate rear wheels. Rear arms look as if they'd clash with one wheel up and other down, but there is actually ample clearance.

welded frame-and-body. All wheels are independently suspended on coil springs, with inboard brakes snugged up to the differentials. There's a high degree of parts interchangeability—front and rear brakes and differentials can be swapped.

Servicing is simplified. The entire front suspension can be pulled and replaced in about half an hour, and engines can be switched in less time.

Old jeep pilots will feel at home: transfer-case gears still give off that keening banshee cry.—Frank Rowsome Jr.

STICK A SNORKEL on the air intake, an extension on the exhaust and a plug in the transmission breather, and the Feep is ready to cross rivers right on the bottom.

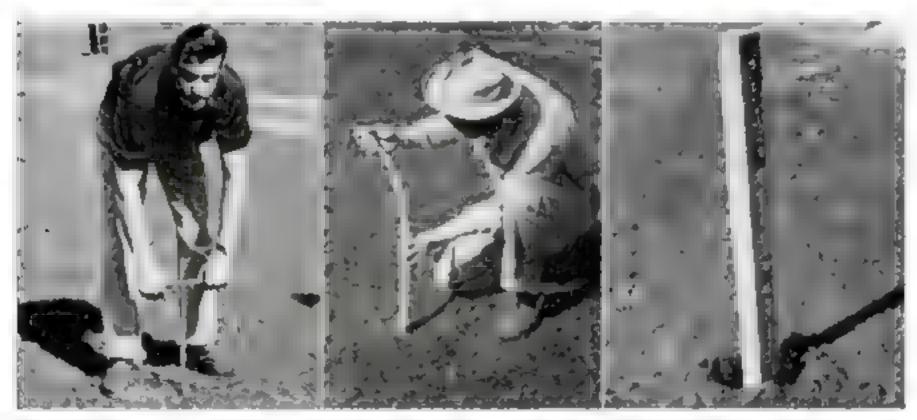

Truck Gets a Lift to the Job

ON THE roof of the New York Telephone Co, building in Buffalo was heaped a lot of debris from construction work there. To cart it away, workmen simply hoisted a truck six stories to the roof, loaded it and then lowered it to the street.

Super Radar Tube Is Unveiled

A vast extension of the scanning range of radar is expected in the near future as a result of the development of this eightfoot, 4,000,000-watt microwave tube. Made by Sperry Gyroscope Co., the giant tube is already in quantity production.

Explosive Cord Takes the Backache out of Posthole-Digging

College fellers at Stanford Research Institute's Poulter Laboratories have found a way to relieve the farmer's aching back when postholes must be dug.

First he drills a one-inch pilot hole with an auger (left), as deep as the auger allows. Then (center) he lowers several strands of primacord, which looks like oiled sash but contains a core of high explosive, into the hole. An electric blasting cap sets off the charge. The resulting hole (right) is clean and ready for the post.

WITHOUT LEAVING THE TABLE in her kitchen, Mrs. Blakeslee can regulate the room's lights and heat, sprinkle the back lawn, control the radio in the den or talk with any other room in the house. Her ingenious husband is seen at right in the front hall.

It's a soft life for this family in a

"Push-Button Paradise"

Most household chores are under fingertip control in the Ted Blakeslees' magical Los Angeles home.

By Andrew R. Boone

BECAUSE it once pained him to have to climb out of a sickbed to turn off a yawping radio, Ted Blakeslee has converted his Los Angeles home into a push-

button paradise.

With the aid of 175 push buttons, 101 relays, 10.600 feet of wiring and an absolute minimum of effort, the Blakeslee family can select radio programs, change phonograph records, regulate the heat, adjust an awning, open and close the garage doors, water a plant, start the car, sprinkle the lawn and edge it, find out who's at the front door and let him in if they choose, telephone to the folks across the street without charge, and

without stirking from BED, the Blakeslees can make sure that the doors are locked, the lights out and the furnace set for the night. That earphone is for solitary radio-listening.

ONLY A DOG CAN HEAR when Blakeslee whistles at his garage door. The high-frequency

sound, beyond human hearing, starts a motor to open the door in five seconds, close it in 15.

THIS PLANT WON'T DIE of neglect, for when the lawn sprinklers go on, set off by a timer, a trickle of water simultaneously flows to the base of the plant through a tiny tube.

It cost Blakeslee less than \$250 but 10 years of part-time work to turn his home into an electronic house of magic. As a Fellow of the American Institute of Electrical Engineers and director of electrical operations for the Los Angeles Dept. of Water and Power, he had the necessary know-how to begin with. The requisite equipment was bought in war-

IF THE LAWN NEEDS EDGING along the front walk, a push on a button in the house causes this resistance wire—the same as used in an electric heater—to get red hot and do the job.

surplus stores, salvaged from discarded material in his own shops or, in the case of certain lengths of wire and cable, given to him by fascinated friends.

When a caller at the Blakeslees' pushes the front doorbell, chimes indoors sound once. After a five-second pause, they sound three times more, of their own accord. If this hullabaloo doesn't rouse the residents, it won't do

THE FAMILY VIOLINIST, Lynn Blakesiee, keeps a running account of her progress by making tape recordings in the den. Buttons inside the phonograph cabinet control it and the radio, pipe sound to five speakers elsewhere. Lynn's doll house (right) is also under fingertip control.

the bell pusher a bit of good to push again. A lockout relay by then has silenced the chimes.

If the Blakeslees are at home and not deliberately lying low, the first chime will usually prod one of them to ask "Who is it?" through a speaker-microphone in the ceiling of the porch. Since the communications system is two-way, the caller can reply simply by talking at the ceiling. If he is somebody the Blakeslees really want to see, they'll push a button that unlocks the door.

His Garage Listens for W histles

Pushing buttons in the front hall also sends the garage doors up or down, but Blakeslee had to work out a different system for opening the garage when he was approaching it in his car. He could have used radio control, but he chose instead to use sound—one of those whistles that dogs can hear but humans can't. Its high-frequency screech hit a microphone, the sound was amplified and a circuit relay got the word, which

This was a satisfactory arrangement until, on four separate occasions, the garage doors shot up when (a) a neighbor celebrating New Year's set off a siren, (b) a truck's brakes squealed, (c) the revolving steel bristles of a street-sweeper made a sound beyond human hearing, and (d) a dog howled.

Blakeslee solved this problem by installing a time-delay in the circuit relay. Now he blows his whistle twice, with five seconds between blasts.

PLUNGING HOOD LINE on the '54 Studebaker Commander, far left, is interrupted on the new President next to it by a fresh grille treatment. Tubeless tires are standard.

Wilbur Shaw, the Indianapolis Speedway's boss, tries out

Shudebraker a New

Extra horses turn the sleek, economical '55 Studey into a red-hot, rarin'-to-go road car.

SOMEHOW, it's something that you would not expect from Studebaker. Advanced styling, yes. A fine automatic transmission, yes. Economy, yes.—Studebaker swept the field in the Mobilgas Economy Run this year. But horsepower—that's a steed, as it were, of a different color.

Yet conservative Studebaker has done it. For the moment, anyway, pending returns from the rest of the '55 cars, Studebaker's new President has more power-for-weight than any other U.S. automobile except Chrysler's New Yorker Deluxe.

It's reflected in the performance, too.

For 1954 the company's top car, the Land Cruiser, required 866 feet to pull out around a car ahead of it doing a steady 50 miles an hour, pass and get back in the proper lane. The President will do the same job in 100 feet less.

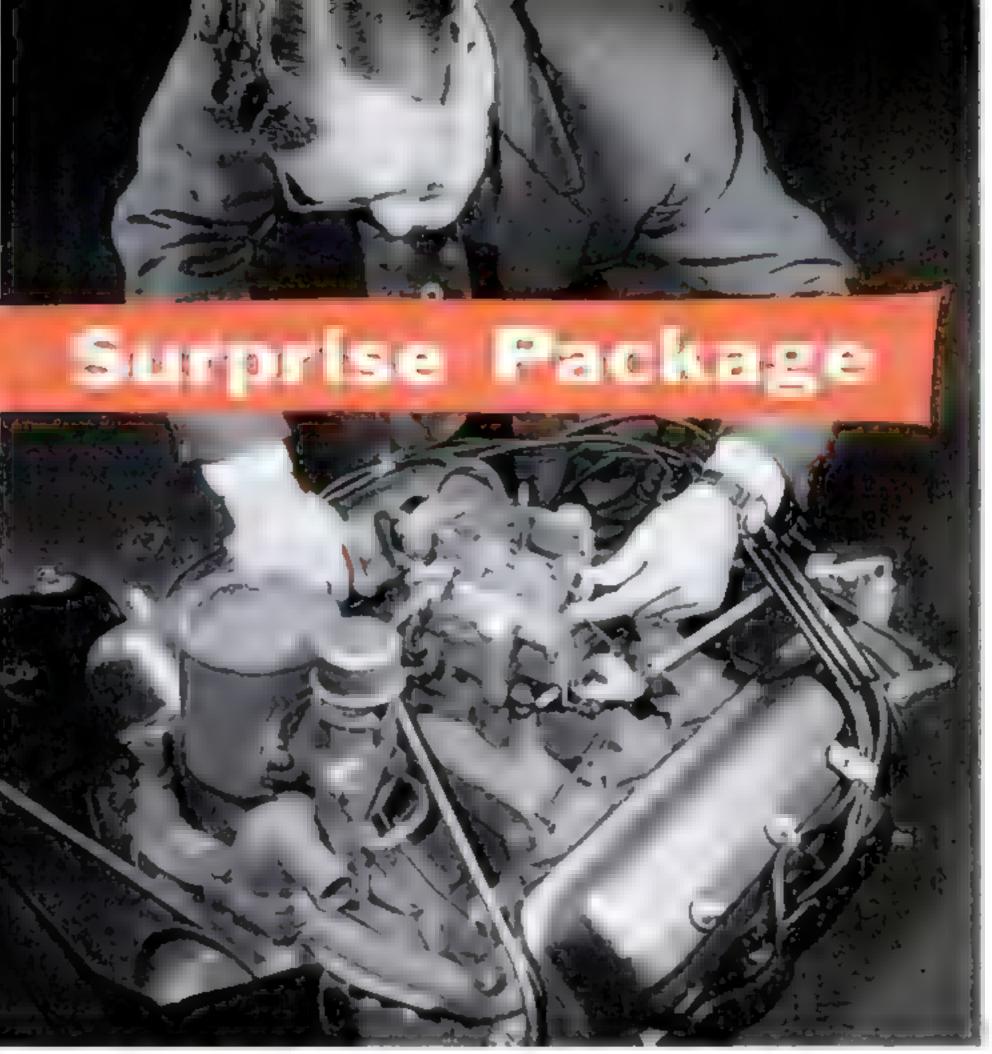

Light Weight Means Extra Punch

As horsepowers go these days, the President's is fairly modest—175. It's the relatively light car weight, in this biggest of the new crop of Studebakers, that gives it the weight/horsepower advantage. At 3,219 pounds curb weight, the President is hundreds of pounds lighter than most cars of similar power. And, as everyone knows, it's the ratio of power to weight that separates the pistols from the peashooters when the light turns.

That's not all that I found out about the company's 1955 cars on a visit to

President tops a gravel-surfaced hill still accelerating. The engine uses non-premium fuel.

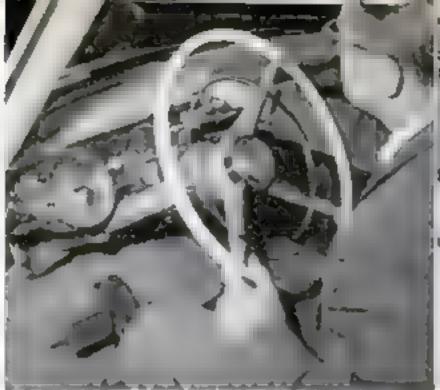

A four-barrel carburetor supplies added sass. An optional 8:1 compression head is available.

the sylvan proving ground on the outskirts of South Bend late last August. The Commander, or middle, line of Studebakers will jump its horsepower with a decrease in piston displacement. And the little Champion, the car that won the economy run hands down, will also be up in power with no apparent sacrifice of savings at the gas pump.

The Studebaker story for 55 comes right off the engineers drafting boards and out of the laboratories. The story is engines.

The President, a line revived for the first time since World War II, is of course the centerpiece of the company's show for the new year. It deserves the rank. Only two cars currently surpass it in horsepower per cubic inch of piston displacement—the two Chryslers and the Cadillac. It's right among the best of them, too, in low piston travel per mile. That means little engine wear

How the car shot up from 127 to 175 horsepower—a 38 percent boost—without a new V-8 block and without raising the

NEW INSTRUMENT PANEL is curmounted by a padded, glareproof shelf. Studebaker is one of only two cars (the other: Packard) offering lockup type of torque-converter transmission.

line of cars. Name was last used by the company prior to our entry into World War II.

compression ratio is one of the pieces of legerdemain surrounding the industry's 1955 cars.

Bore-and-Stroke Ratio Is Changed

The engine has been just slightly oversquare-the bore was an eighth of an inch greater than the stroke. For 1955 the disparity between bore and stroke is greater-39/16 by 3% inches.

That's part of the answer. It used to be a rule in designing engines that you could get a lot less wear-better mechanical efficiency-by increasing the bore and shortening the stroke. But you would get less power out of your fuel; your thermal efficiency suffered

The rule still holds good, but it has been modified. Today, with higher com-

pressions, better fuels and overhead valves, the engineers are gaining more than they lose by expanding the bore and shortening the stroke

There are contingent benefits in this. In a typical long-stroke engine each piston will cover 40-odd miles in its upand-down cycle in the cylinder for every 100 miles of highway travel. In a typical short-stroke engine-that in the President, for instance-each piston will cover only 29 miles over the same distance.

When the stroke is shortened, the incoming air-gas charge and the outgoing burned gases have a good deal less velocity through the valve ports. That lengthens valve life and, incidentally, reduces engine noise.

[Continued on page 258]

FACTS ON '55 STUDEBAKER

Model: President 4-door sedan. Engine: OHV V-8; 175 hp. at 4,500 r p.m., compression ratio, 75.1; piston displacement, 259 2 cu. m., piston travel (in feet per car mile at 20 m.p.h.), 1,569 with standard transmission, bore and stroke, 3.56" by 3.25", erankshaft bearing surface, 43.7 sq to, torque, 250 lb.-ft at 3,000 r p m.

Weight: 3,219 lb., per hp., 183 lb. Transmission: 3-speed manual shift, overdrive or automatic drive optional; rearaxle ratio, standard, 3.92-1

Steering ratio: 24.1; radius of turning

circle, 20 5'.

Effective brake-lining areas 195.3 sq. in. Springs: front, coil, rear, semi-elliptic.

Outside dimensions: height, 60", overall length with bumpers and guards, 2062", width, 70 7/16"; wheelbase, 120%"; overhang, front 37k", rear 48k", tread, front 56 11/16", rear 55 11/16".

Tire size: 7.10 by 15.

Price: \$2,710.83 with automatic transmission, power brakes, power steering; taxes and freight extra.

Six-Well Oil Rig Digs In

One drillers can sink six three-mile-drep wells from this big rig without leaving its platform. Ordinary offshore rigs must be easier that and total by barge to each new location. Aboard this giant in the Gulf of Mexico, the crew moves the crown block, or pulleys, at the top, changes over the pipe rack, slides the drive mechanism on the floor to a new position and, 12 hours after finishing a well, is ready for another.

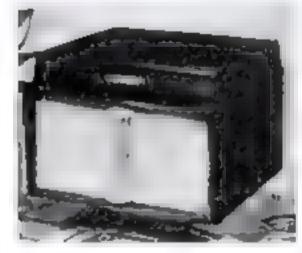

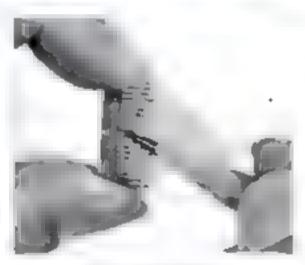

Table Model Is Hi-Fi

A COLUMN of 16 tmy vertical speakers, forming a half cylinder on the front of Philco's new table-top hi-fi phonograph, diffuses the sound over a 180-degree pattern. This type of loudspeaker, new to table phonographs, is called "electrostatic."

Cartridge Fills Pen

This new C/F fountain pen, made by Waterman, has been weaned from the ink bottle. To fill it, you merely insert a cartridge in its barrel. When it runs dry, change cartridges. A supply of eight comes with the pen.

Tiny Cell—Big Job

A PEEWEE light- and heatsensing cell of very great sensitivity, so small that 20 of them are on the threequarter-inch piece of glass above, has been developed by Eastman Kodak. It can be used to control switches and chemical processes.

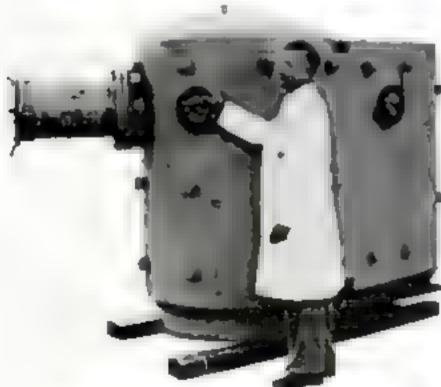

Most Ancient American Skull Is Rebuilt

FROM fossil bone fragments found by an amateur archaeologist near Midland, Tex., Dr. T. Dale Stewart (left) of the Smithsonian Institution has pieced together a male skull that he says is 12,000 to 20,000 years old-oldest yet found in the United States.

Big Air Compressors Now Travel by Train

The Navy now owns two mobile air compressors, capable of supplying 5,000 cu. ft. of air per minute at a pressure of 125 pounds. Clark Bros. of Olean, N.Y., built them and installed them on a railroad car (right), in which they promptly rode to the rescue when a shipyard's regular compressors failed.

Cabin Duplicates Space Flight

Before the U.S. Air Force attempts to fly beyond the earth's atmosphere, it is going to find out what it's up against by "flights" in this sealed cabin at its School of Aviation Medicine, The cabin duplicates conditions of space travel.

New TV Set Lowers the Screen

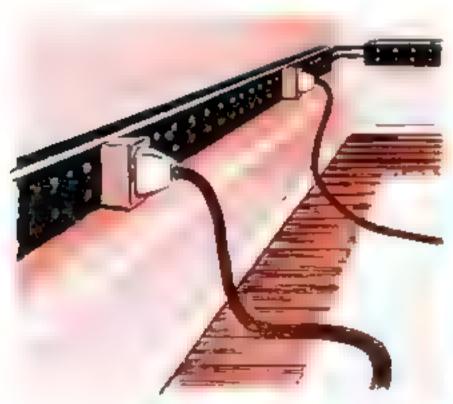

Low enough to fit under many a picture window, a new General Electric TV model mounts its \$1-inch screen near the floor—a natural viewing angle, the company points out. The controls are above the screen, on an upstanting panel.

54 POPULAR SCIENCE

Plug-in Traffic Light to Time Itself. This clock-faced portable signal might help police regulate extra-heavy traffic on roads that don't need full-time control. It could be plugged into any electric outlet.

Timed by its own clock, it could be set for any interval or synchronized with other lights. It would have only a single face for each direction; green and red bulbs would light up behind the glass clock lens.

2 Molding to Keep Outlets Handy. A continuous electric outlet made in the form of decorative molding trim would let vou plug in appliances where you want them. This molding, carrying two conductors, would be perforated along its face. Adapter plugs, made to fit the perforations, would take standard plugs

3 Knife to Wash as It Peels. With this paring knife connected to the kitchen tap, a cook could skin vegetables faster and better. Running water squirted through a hose and along the blade would wash off the loose peelings. The inventor says it will also hose down the smelly particles that usually make onion peeling a tearful job.

MORE New Ideas from the Inventors

4 Shoe to Float You on Air. If your feet object to being walked on, they might find comfort in this air-cushioned sole. It would absorb a lot of pounding and road shock without greatly increasing a shoe's weight or bulk. An air pocket inserted between the separated upper and lower sole sections would provide the cushioning effect.

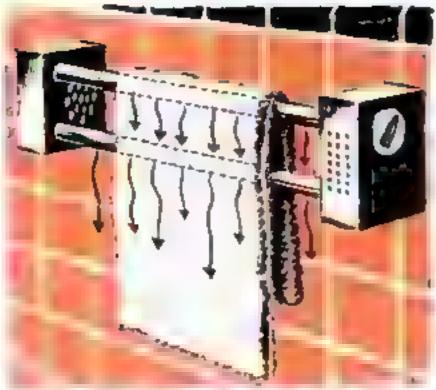

5 Case to Fit on Steering Wheel. Chipped to the spokes of a steering wheel, this utility attachment would keep cigarettes, notepaper, coins and other items within easy reach. Narrow-mouthed troughs fitted into a transparent plastic retaining disk would hold the objects and keep them from being dislodged by normal steering movement.

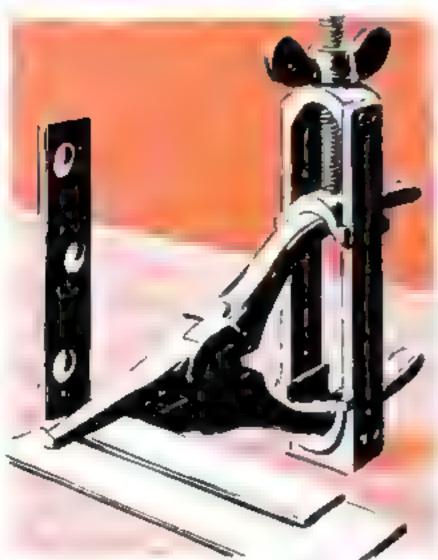

6 Roof Floats to Buoy Copters. Ordinary roofs have to be heavily—and expensively—reinforced before they can be used as helicopter fields because the points where the wheels come to rest must support

loads of several thousand pounds a square foot. This inventor says, however, that any roof sturdy enough to hold a tank of water would serve. He'd float landing platforms on the water to distribute the weight.

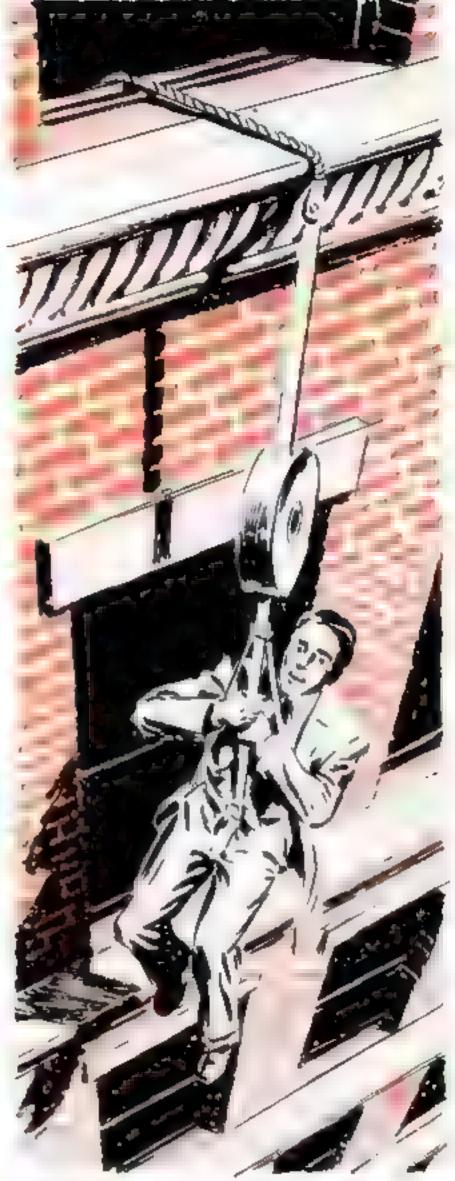

U. S. patents on these inventions have been granted to: 1. A. Finn. Valdasta, Ga., 2. R. K. Hensley Jr., Silver Spring, Md.; 3. F. R. Barbee, San Gabriet Galif., 4. W. Reed, Memphis, Zenn.; 5. F. Berman Pewsaker Mis., 6. 4. C. Thamson, Manhattan Beach, Calif.; 7. E. N. Jacobs, Louisville, Kv.; 8. J. Elsberg, NYC; 9. F. D. Milneyte, Monroe, Mich.

7 Electric Rack to Dry Towels. This bathroom fixture would end the nuisance of soggy towels even on the dampest days. It would also be handy for quick-drying small laundry. The rack would have an electric heating element and a fan built into one end. The fan would force warm air through the vented, hollow towel bars.

Mechanics who have tried to hold small parts in one hand and work on them with the other should appreciate this simple clamp. It would turn almost any pair of pliers or pincers into a small-parts vise. The plier yoke could be screw-fastened to a work surface or gripped in another vise.

9 Escape Reel to Brake Itself. This portable fire escape would let its passenger down without the terrifying acceleration of an ordinary rope drop. As the coiled steel tape played out of the top of the descending reel, the weight of the rider would increase the braking pressure enough to level off the rate of his fall.

Will Rubber Hubs Improve Your Ride?

RUBBER SLEEVES, between spindle and tire rim, can be soft enough to indent with finger pressure. This is because load is distributed around entire circumference, not just in limited areas. Calculations for the rubber hub were worked out by Dr. M. A. Muller, the mathematician who developed formulas for the Heinkel jet bomber in 1939. Spring wheels now weigh about a fifth more than conventional ones, but use of light metal alloys may cut this. Tests so far show no predictable limit to the life of the rubber, which is expected to last as long as the vehicle will.

New cushioned disks for cars and motorcycles soften bumps, reduce spinning and skidding.

By Harry Walton

TAKE a slice of well-seasoned tree trunk, true up the outside, mount a soft balloon tire and roller bearings, and you have a fair facsimile of the modern auto wheel, Basically it is still the wheel that some prehistoric genius invented 5,000 years ago—a rigid disk

What could be better?

A conrigid wheel, which would help absorb road shock, prevent tire bounce, cut down on skidding, and almost eliminate tire spin would certainly be better.

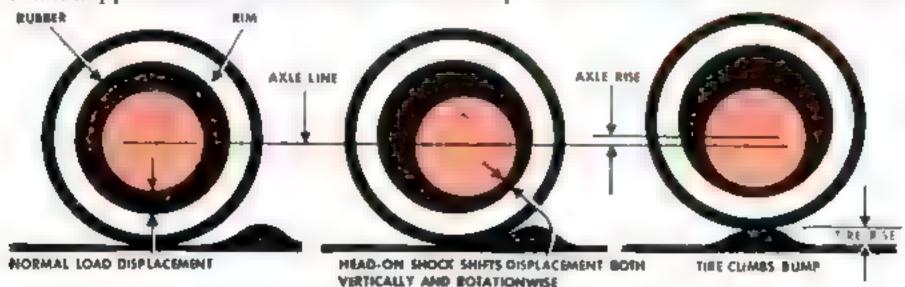

A wheel reported to do all this, the

first major improvement since the ancient Egyptians discovered spokes, has been invented by a German, Albrecht-Wolf Mantzel of Frankfurt. Instead of rigid spokes or a steel disk joining bub and rim, it has rubber rings or sleeves.

In this wheel, the rim and tire do not always run concentric with the hub. They "run out"—turn eccentrically—whenever the car hits a road bump, the brakes are applied, or you step on the gas. This run-out keeps shock from getting to the hub, and gives a new kind of ride that may outmode every car on the road today.

Outlawed for racing. Last year Rolf Goetze, German automobile-parts manufacturer and race-car enthusiast, put Mantzel's wheels on a Porsche racer.

What happens when a rubber wheel hits a bump ••••

LIVE-RUBBER SECTION of new wheel translates first head-on shock of a road bump into rearward displacement of rim, instead of delivering a solid clam to the spring suspension. At the peak of the bump, rubber absorbs part of the upward displacement of the axle. This means that the conventional car springs need disperse only a smaller and gentler axle movement.

58 POPULAR SCIENCE

He won a Nurburgmag event with it, although the car was smaller and less powerful than some racing against it.

European racing authorities promptly outlawed the wheel because it was not available to all drivers and its advantages made it unfair competition.

But H. J. Rand, president of the Rand Development Corporation, Cleveland, and a prominent inventor in his own right, had spotted it. He sent a Ford overseas to be fitted with the new wheels for testing. By May of this year the car had clocked 20 000 tough test miles. and Rand proceeded to acquire American and other rights to the invention.

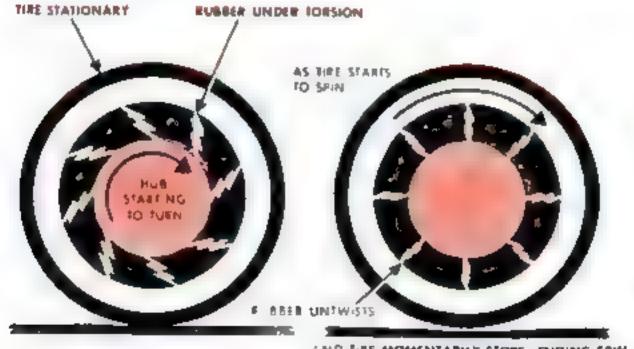

What it does. An ordinary tire supports the car-and absorbs shock-only on the small "footprint" in contact with the road. The rubber wheel, like the spokes of a bicycle, does so all around. Because the load is so distributed, the rubber rings or sleeves can be much softer than a tire-and absorb more shock.

To prevent sidesway, a disk is bolted between the two halves of the wheel The inner wheel surfaces touch the disk on sharp turns, preventing the rubber rings from yielding to side thrust.

With rubber as a working spring inside the wheel itself, unsprung weight is reduced to a minimum. Look at your own car and you'll see that the tire, rimwheel, hub, spindle, steering knuckle and suspension arms all have to lift to every bump in the road before spring-

HIGH-SPEED PICTURES reveal differences when motorevele wheel strikes plank at 25 m.p.h. Strobe shot at top shows that impact energy makes conventional wheel bound into air. The shot just above shows that the rubber hub and the tire between them absorb most of the impact energy, which is "paid back" without a substantial amount of recound.

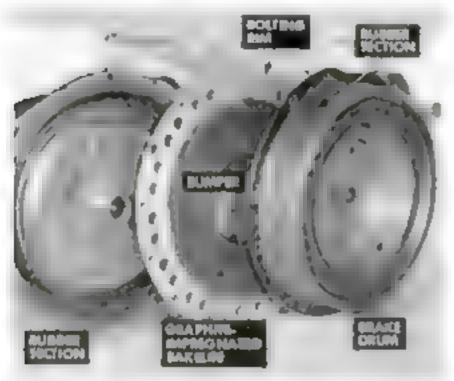

AND THE MOMENTARILY STOPS BIDING SPIN

WHEEL RESISTS SPIN for reason shown at left. Driving torque is transmitted through rubber, putting it under torsion (twisting stress). Should the tire break free of road surface and start to spin, this torsion in rubber is immediately relieved. For a split second the rubber transmits no driving torque. The spin, having nothing to maintain it, ends almost before it begans. Tests made on icy and wet surfaces indicate that cushioned coupling adds an extra safety factor here, too.

IDENTICAL TEST MOTORCYCLES differ only in use of rubber hubs, front and rear, in the one at left, and solid hubs in other. Rand Development Corp. is working on military applications. No U.S. civilian makers have yet committed themselves, though one German maker has.

SPRUNG WHEEL uses these parts, plus additional rim for tire. Rubber sleeves about 44-in. thick are bonded between inner and outer sections of the parts at left and right above. Center disk is bolted between outer shells, and rides free between their flat inner surfaces with small clearance. Side loads, as in cornering, bring flat surfaces against center disk, preventing sidesway. Center disk also acts as humper on extreme shocks, bottoming against shaft housing. These are parts of experimental Volkswagen wheel with integral brake drum.

ing starts to cushion it. In the rubber wheel, only the tire, rim and center disk are unsprung.

Minor road shocks are ironed out by the rubber sleeves before they ever reach the hub. The result, according to Rand, is that a light car rides like a Cadillac, Add minor results: body rumble vanishes, and the jolt of concrete road joints goes with it.

With sprung wheels, medium-pressure balloon tires give the same soft ride as today's low-pressure "marshmallows," while restoring some of the cornering ability we've lost to the big tires. You can get around curves with notably less squeal or sidesway.

Keeps its joot down. Other advantages of the rubber wheel are also surprising. Road coupling is much better—the tire keeps its foot down on the highway when an ordinary wheel would bounce. Brake chatter and the grab-slip-grab effect of braking on rough roads are largely eliminated. Braking pitch and deceleration shock are reduced. The rubber cushion between tire and brake drum softens every stop, while better road adhesion might make smaller braking areas feasible.

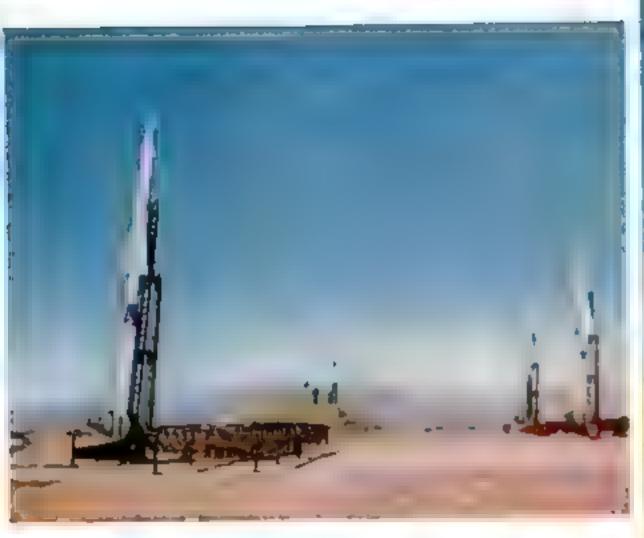

Another effect shows up on acceleration. It's virtually impossible to spin a rubber wheel on dry pavement, Shaft torque loads the rubber rings, putting them in torsion or twisting stress. The instant the wheel slips on the road, the rubber torsion lets go, momentarily releasing driving torque from the rim. The spin has nothing to keep it going.

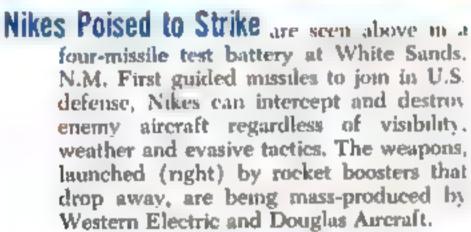

Even on wet and icy surfaces, Rand tests show, this cushioned coupling goes far to bridge that fatal instant when rolling friction dissolves into sliding friction. Rubber wheels start more surely, skid much less than solid ones

When will we have them? Rubbersprung wheels will be standard equipment on all models of new German BMW motorcycles. W. H. Nichols, Rand vice-president, reports that his firm is working on military applications

Older cars could be fitted with the new wheels, but would not make the most of them. (No wheels are as yet available to the public.) The reason: a return to stiffer springing, harder tires and a lower steering ratio would be possible with sprung wheels, with improved roadability and cornering as a bonus. Therefore new cars, redesigned for them, seem the best deal.

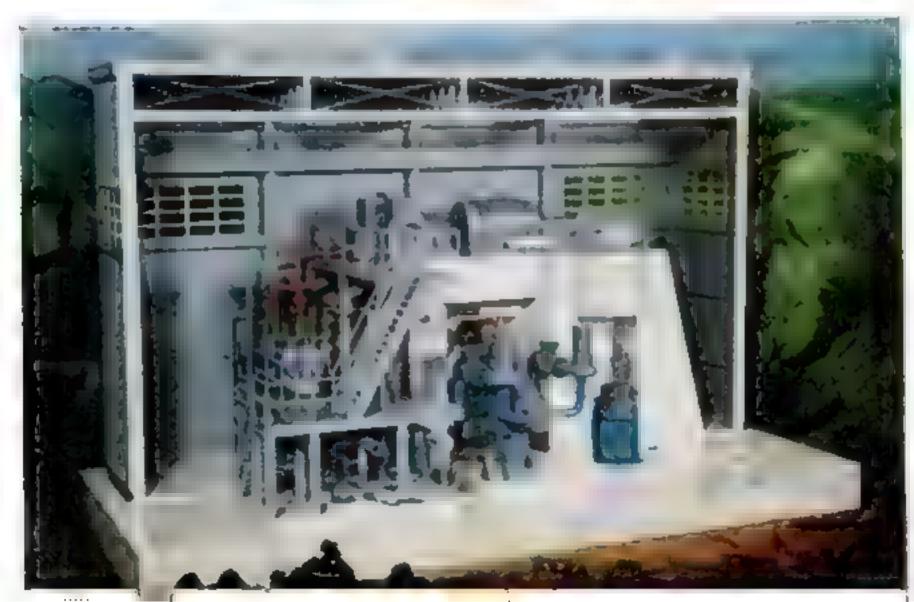

American wheel and automobile manufacturers are reportedly interested in the Rand rights. Some day your car may roll on rubber-sprung wheels. If it does, you'll like it.

Packaged Atomic Power is forecast by this model of a small nuclearpower plant whose parts are transportable to remote regions by airplane or truck. The Army has already asked for bids to build a
1,700-kilowatt plant of this nature American Machine & Foundry
Co. sent the model to the current World's Fair in Sao Paulo, Brazil.

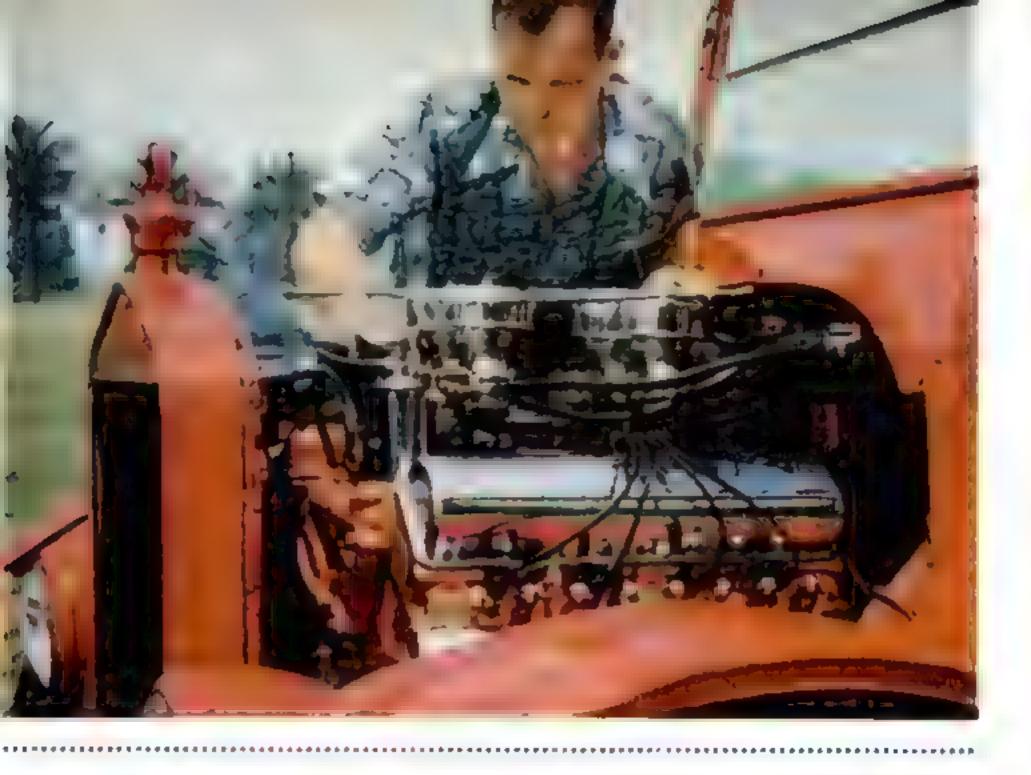

Californians Concoct Colorful Custom Cars

This Was a Model T

PUTTING 247 horsepower in a Model T makes a zesty vehicle. When Leroy Rayner of Compton, Calif, nudges the throttle of his hotted-up '54 Cadillac engine, the Model A Ford chassis nearly scoots out from under the ancient Model T body. Hydraulic brakes and tubular shocks help in the survival department, and radio speakers front and rear add a cool touch. Rayner can't surprise the unwary at stop-light brushes; engine is so big that the car runs without a hood.

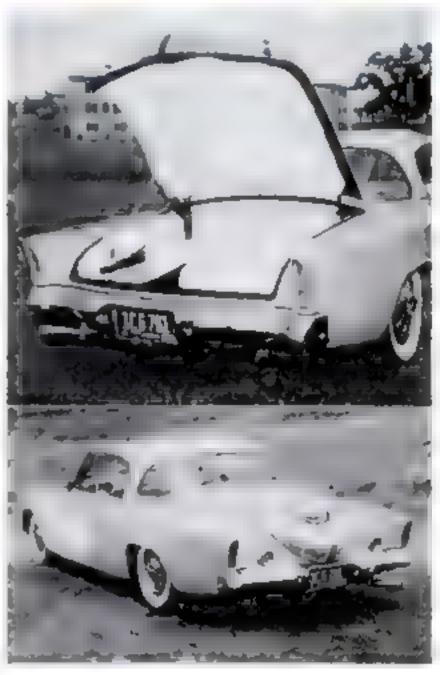

This Was a Studebaker

THOUGH you might think that a hard-top Stude is finished enough to appear in public, California architect Alfred Riggs didn't agree. With an assist from his wife, he spent 2,800 work-hours and \$6,500 in turning out one of the plushiest cars imaginable. The body was dropped three inches, lengthened four, and covered with 67 coats of fluorescent lacquer.

In photos at left, note color in engine compartment; special plastic egg-crate grille; polarized, detachable plastic top, and elegant, tissue-thin leather upholstery. At right, note the gold-plated tools arrayed at one side of the padded, leather-lined luggage compartment, and the don't-trip-over-it look achieved by lowering and lengthening the body.

Riggs didn't skimp on the machinery. The bored-out mill runs at 10-1 compression and has special headers, a four-barrel carb and roller tappets. Electric latches release hood, deck and doors.

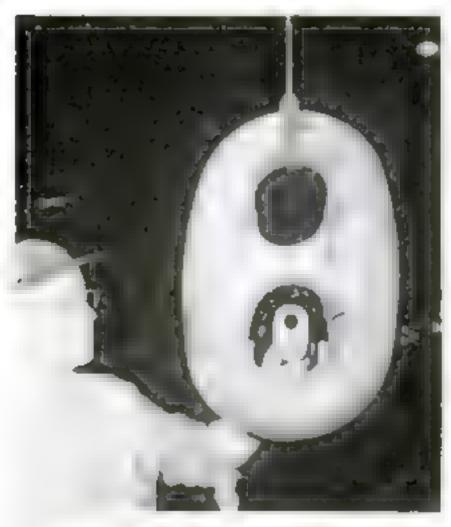

Stroller Unfolds from Suitcase to Give Tired Tot a Lift

zoo, you just open up this small suitease. fold down the wheels and handle, and roll your tired little tourist the rest of the way

IF YOUNG legs give out on a visit to the home. The folding go-eart, made by the Pakopram Co., 781 High Road, Tottenham N 17, England, was displayed recently at the British Industries Fair.

Carrier Gets Giant Tether

THE largest chain ever used by the Navy will weigh anchors aboard the giant aircraft carrier USS Forrestal, Links like this one weighing 360 pounds give the cham a breaking strength of 25 million pounds. The 4% inch cham link held by the workman is used on small landing craft.

Power Adds Zip to Surfboarding

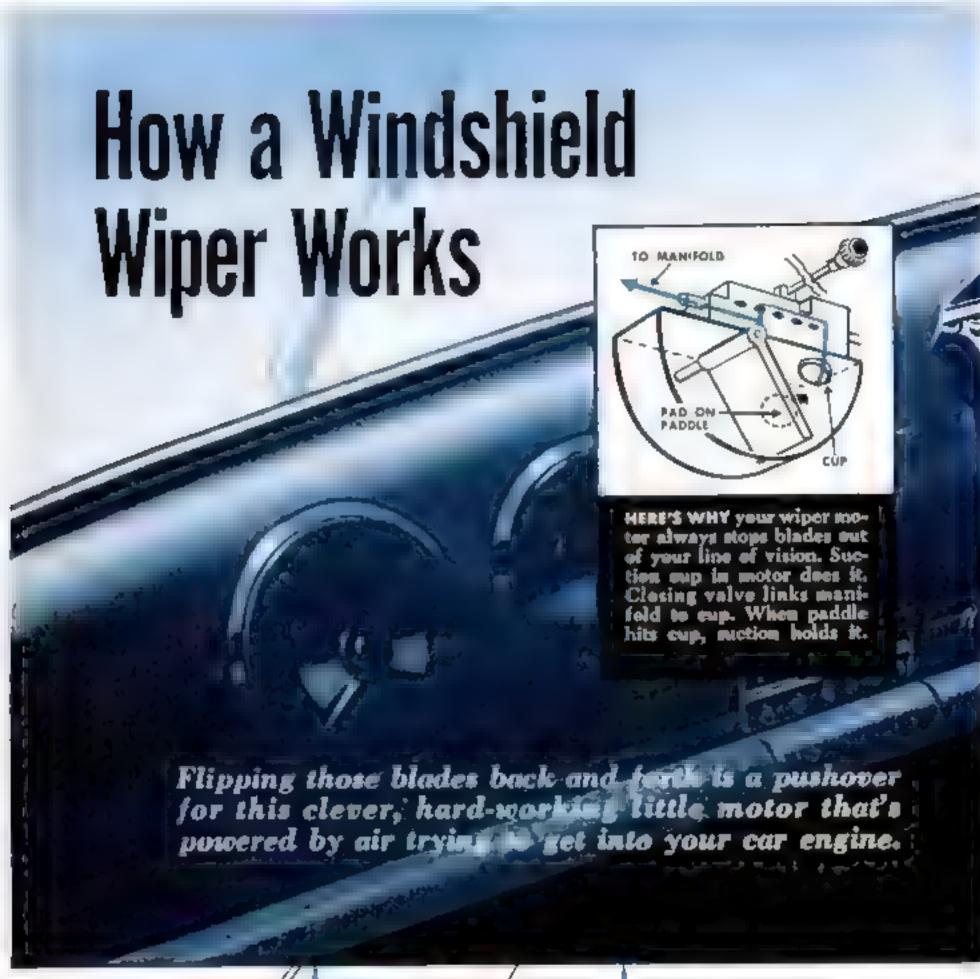

WHEN Dick McGinley and Alan Rosendahl hanker for a little Florida surf hopping. they're never beached for lack of a tow. They scoot off to sea on motorized surfboards. Above, they race one another to get in trim for the annual motorboat race from Miami to Palm Beach and back.

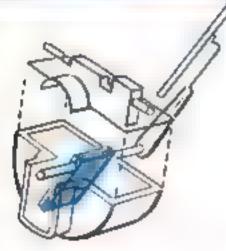

Great Red Spot of Jupiter, mystery to science, peers like an eye from portrait of biggest planet by Wilson D. Hole, amateur astronomer and commercial color expert of Pasadena, Calif. Basing it on black-and winter photo taken with 200-inch Mt. Palomar telescope, he added accurate bigs. Astronomers say Lis rendition excels direct color photos.

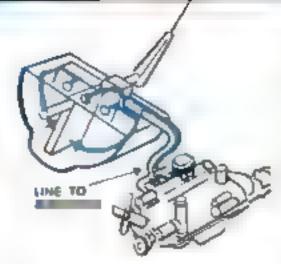

Air-Propelled Sied serves sports and commercial fishermen of Lake Superior's Apostle Islands area. This 16-footer, called newest and largest of its kind, skims ice (below) or open water. It has a 200 hp aircraft engine, steers with an air rudder and carred over a ton of fish or nets for a commercial fishery.

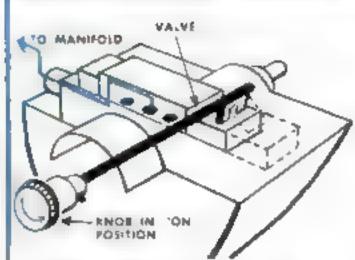

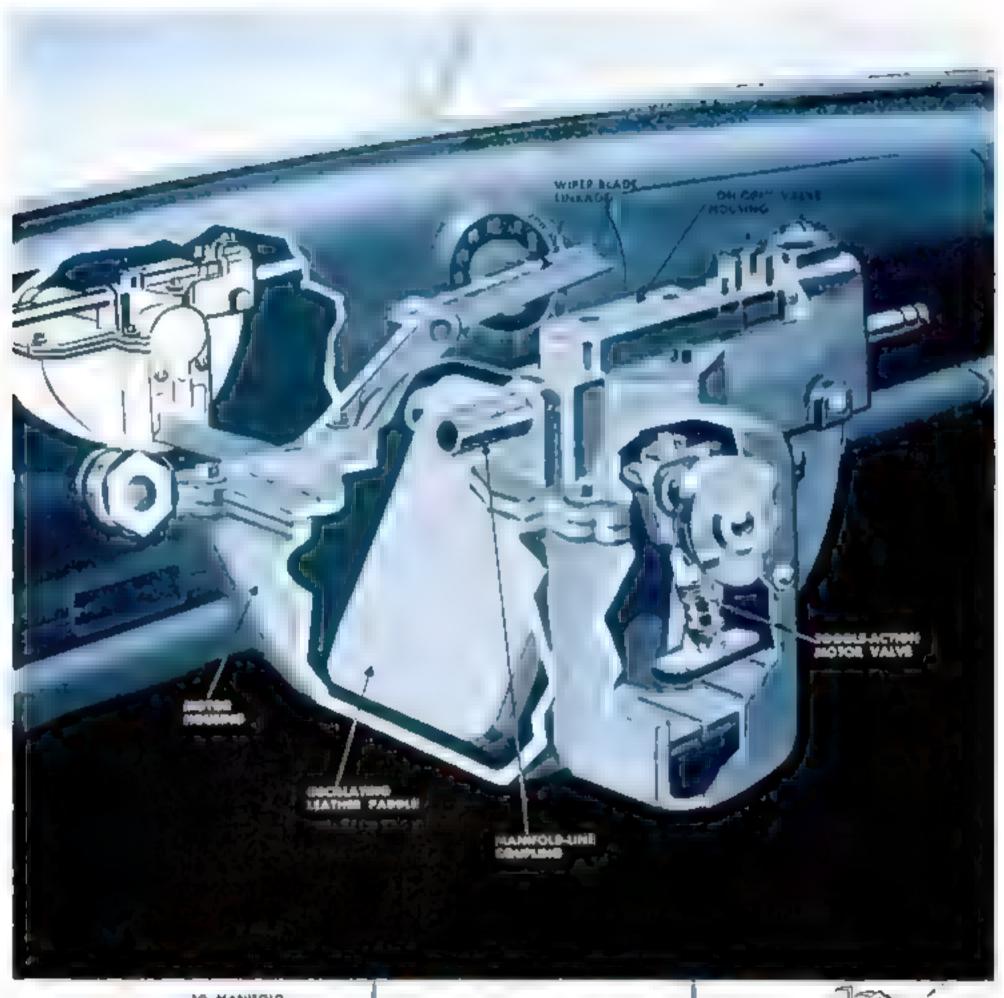

MAIN PARTS of wiper motor are a thick leather paddle and a half-cylindrical housing in which the paddle swings like a pendulum. Shaft turns with it. Wiper blade, or linkage for twin blades, fits on shaft end.

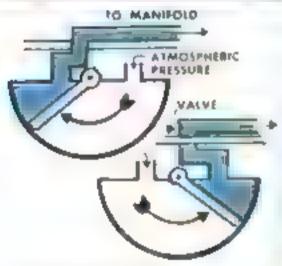

base three ports on one side and a hose connection at one end. Center port leads to hose connection and line to engine's intake manifold. Other ports lead to two sides of paddle.

WIPER KNOB is connected with valve that sets up routes for air at normal and semivacuum pressures. In "on" position, line from center port to manifold is open and air is drawn in through this port.

alternately with the ports on either side, pressure is reduced, first on one side of the paddle, then the other. Air entering the unbridged port kicks the paddle through its arc.

VALVE, which bridges two of three ports and uncovers the third, is shuttled back and forth by a kicker plate. Kicker must be tripped quickly at the end of each paddle stroke, to reverse unbalance of air.

RICKER IS TRIPPED by a springloaded disk engaged by paddle-shaft end during latter part of each stroke. Shaft turns disk past its center point of spring tension, producing toggle action.—Henry B. Comstock.

Hollywood Planets Wage

By Andrew R. Boone

PROTESS OF TO EXCOMPOSE

ON A Hollywood sound stage, futuristic warplanes rode meteors' tails to attack a faraway planet. A red-hot flying saucer streaked through the earth's

METEOR'S CRASH upon imaginary planet, Metaluna, gives flery explosion. Meteors are made of plaster remforced with jute, and trail streaks of fire. Magnesium, chlorate of potash and thimblefuls of gasoline provide the fireworks.

atmosphere at a velocity of 72,000 miles a minute.

They were staging a space war, between the people of the imaginary planets Metaluna and Zahgon. Movie-goers will see it this winter in the film *This Island* Earth, based on Raymond F. Jones' novel of the same name.

How do you visualize interplanetary warfare? That's where Stanley Horsley, special-effects director for Universal-International, and his experts came in. For the answers they consulted Mt. Wilson astronomers, watched A-blast films and studied designs for planes to come.

Made of aluminum, the movie's 18pound flying saucer sailed past a background of 1,000 stars, patterned after a color photo. As the saucer approached Earth, lamps bathed it in red light to make it look red-hot from air friction

Metaluna and Zahgon Fight It Out

A set resembling a cratered battlefield depicted the surface of Metaluna. Its inhabitants, in this science-fiction fantasy. try to repel fighter planes from Zahgon by ionizing an atmospheric layer with atomic energy. Red and green lights, flashed on a 22-by-115-foot background screen, simulated the aurora-like barrier. The script has fighter planes ride behind meteors to penetrate it, while a red ray, wielded by the defenders, destroys both meteors and planes. On the movie stage, models of meteors and fighters slid down blackened piano wires and blew up, when trip wires set off tiny explosive charges within them. Multiple exposures brought together the saucer, fighters and red ray.

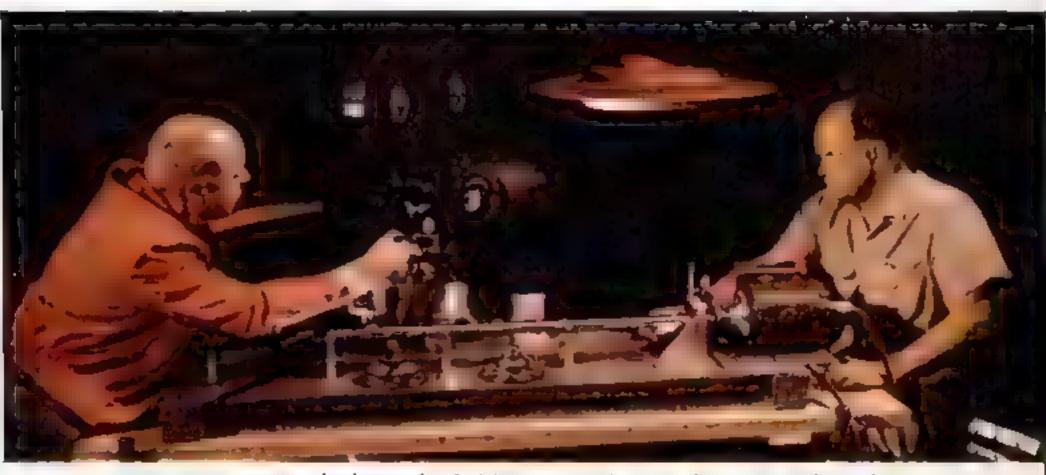

Staging special effects with miniatures is painstaking, costly business. Shooting the scenes took 26 days; matching bits of action on the frames, 15 weeks. The make-believe in this 16-minute bit of the film cost \$100,000 to produce.

Space War

Plane and saucer models fight interplanetary battles to film this new science-fiction thriller.

Gus Goes Dowsing for Water

By Martin Bunn

YUS'S sleepy eyes focused on the bedside clock as his hand reached out to silence the telephone. It was

five o'clock in the morning.

"Is this Mr. Wilson?" an eager voice inguired over the phone, "I'm Barney Overholtz. The crankcase of my car is full of water, and I've got to deliver my news-

papers,"

Gus was of a mind to hang up and go back to sleep. Then a mental picture came to the Model Garageman of Barney's thin young features, and he didn't have the heart to do it. Barney was 17 and as freckle-spattered as a brook trout. He had the trustful brown eyes of a cocker spaniel.

"Hold your horses kid," Gus told hun.

"I'll be right over."

At Barney's house, Gus checked the oil stick of the kid's 1941 Ford. Then he did the only thing possible at the moment-for Gus. He loaded Barney's papers in his tow truck and started delivering them over Barney's rural route, Folks who were up this early were startled at the strange dawn vision of the burly owner of the Model Garage, Gus was flipping papers onto the porches, with Barney grinning at the wheel.

Gua Takes a Car Case History

"Now about this car of yours," Gus said. "You've had it about a month. haven't you? Have you ever let it run out of water and get hot? It's not been cold enough to freeze and crack the block."

"It's never been hot," Barney assured Gus.

"In that case," Gus declared, "since you

bought it over in the city, you should contact your dealer there. He should fix it."

"Gosh!" Barney exclaimed, "Do you

think he would?"

At that moment Gus was inclined to think that he wouldn't. Most used-car dealers in the city were honest, but it was an old trick of unscrupulous dealers to put a temporary repair on a cracked block, and foist the car off on some unsuspecting character like this kid. The car would run all right for a few days. but then the crack would open up and fill the crankcase with water.

"I'll have to have it fixed right away " Barney said, his eyes auxious, "or Mr. Thompson will take away my paper

route."

A Ribbing for the Model Garageman

As soon as the newspapers were delivered Gus took Barney home and towed the water-logged Ford into the Model Garage. He got a quick breakfast at the café, where Officer Corcoran kidded him.

"My paper was late this morning. Gns." Corcoran declared, "It had greasy fingerprints all over it. The next time this occurs I'll have to report you to Mr.

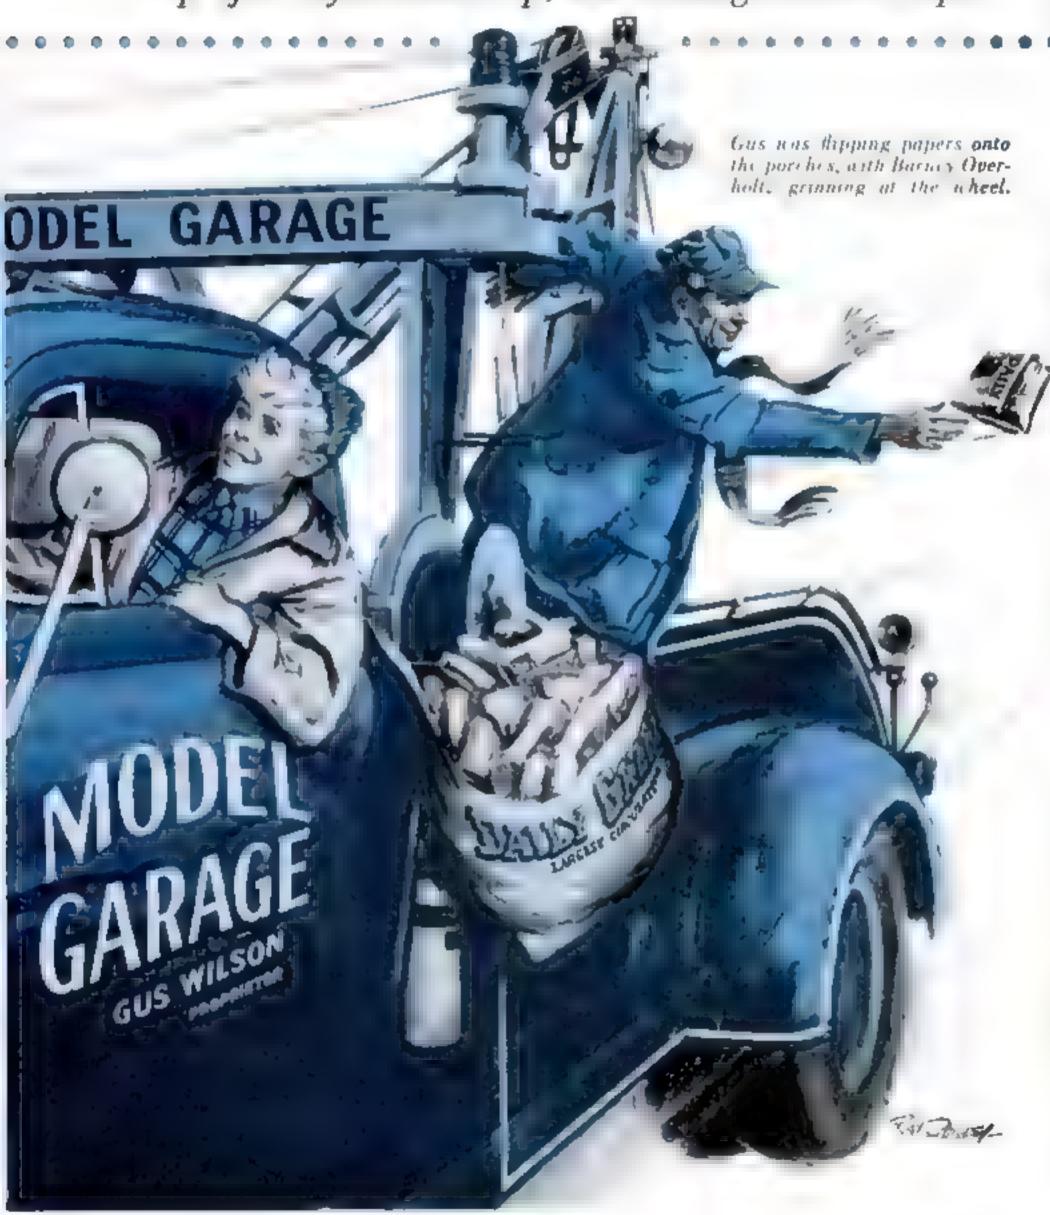

Thompson."

"If it occurs again," Gus chuckled, "I'll be going to bed at dusk, so I can get up at five. Barney jangles a mean telephone,"

Back at the garage. Gus put in a long-distance call to Stevens and Bartlett, the used-car dealers where Barney had bought the car. Their attitude in the matter was about what Gus had expected.

"The car was all right when the kid took it out." Stevens told Gus, "We couldn't be expected to repair a water leak on an old car like this, after it's been

A freckle-faced youngster had put his faith in the Model Garageman. And somehow, Gus had to trace the leak that, drop after mysterious drop, was eroding the kid's hope.

driven 30 days on a paper route. Kids do things to cars, you know."

"I know," Gus said wearily, "and so

do some dealers."

Gus hung up, wondering about what kind of an outfit Stevens and Bartlett were, He began working on the car, He drained water and oil, pulled the heads, began scraping carbon, inspecting gaskets for imperfections, block faces and valve ports for cracks. Stan Hicks, Gus's helper, strolled from the grease rack, grinned widely at Gus.

"You always were a sucker for kids,

Gus," he said.

"It isn't that," Gus protested. "I'm just curious to see if this used-car outfit is trymg to gyp Barney Overholtz.

The carbon on heads and block faces was dry, indicating rings in good shape, There were no signs of water having been in the

cylinders. There were no cracks, even at those danger points between valve ports and cylinders. Gus was puzzled. There had to be a crack some place. It must be inside the valve compartment.

Cylinder Walls Are Undustorted

A crack in a cylinder water jacket. tuside the valve compartment, Gus told himself, seldom occurs unless a car has been badly frozen. He ran his inside micrometer around in the cylinders. Its reading showed that the car had been rebored to 60 thousandths oversize, yet there was no distortion of cylinder walls, such as would have been the case if the car had been badly frozen. Really, except for the mysterious crack, the old heap was in exceptional shape,

Gus pulled the generator and then the manifold, which on a Ford V-8 also acts as the valve-compartment cover. At once he saw water mixed with oil. This meant nothing, since water would have been pumped up here from the crankcase with the lubricating oil. It would be almost impossible, Gus knew, to locate a crack in here visually, without pulling valves, springs and guides, and cleaning the compartment with steam, Gus cleaned it the best he could, using a solvent spray and blowing out with compressed air. He could find no cracks, and being certain that there were none in the compression chambers, he replaced the engine head and filled the radiator with water.

Gus peered about in the valve compartment, seeing no water flow. Maybe

> the crack was way at the bottom of the block. This hardly seemed likely, but could not be overlooked. Gus pulled the pan, lay under the motor, looking up, He was there for perhaps five minutes, before he saw a single drop of water drip from the front throw of the crank-

giving Ed a little trouble again."

shaft, which was in the down position. Just at this moment the phone rang.

"This is Stevens," a voice said over the wire. "You understand, Wilson, that the 30-day guarantee on young Overholtz' car has expired. Still, we'd like to know what's wrong with the car."

"At the moment," Gus said, "water is leaking out of the crankshaft.

"Out of the crankshaft!" Stevens repeated. "Never heard of such a thing."

"Neither have I." Gus told him as he hung up.

Getting under the car again, Gus found, by turning the crankshaft, that the water was very slowly issuing from the timing-gear case. If there was a crack up there, behind the timing gears, Gus told himself, they might as well junk this motor. He crawled out, backed to the bench and lit his pipe.

There was something queer here, Gus thought, A crack caused by a freeze-up, in a car that had been rebored to 60 thou-

o-It-Yourself Santa Claus

Your workshop can make this Christman the Christman. Here are toys of a kind and quality few people can buy. Here are decorations to make your house the envy of the neighborhood. And here's how to make them—15 pages of plans, patterns and details.

Here's a new way to trim a

hristmas Window

It's easy to make your display a unique one this year by using these patterns to cut plastic.

You need is a white foam plastic that makes beautiful window decorations.

Even if all your 10 fingers are thumbs when it comes to carving, you can wow the neighbors with this stuff, called Styrofoam. Five special designs—the kind you won't find duplicated in the stores—

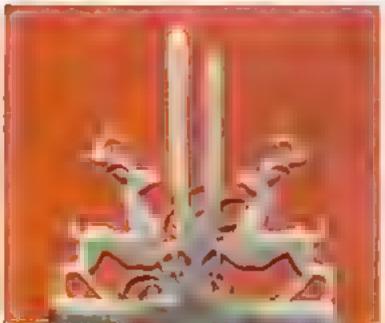

Your window can look like this for Christmas.

have been worked into patterns for you to follow. Two (on the following pages) are reproduced full size. You don't have to scale them up, Just lay the magazine page and ordinary carbon paper over the plastic, then trace the outline with a hard pencil. These designs were created for POPULAR SCIENCE MONTHLY by William Becker of Terre Haute, Ind.

The material itself is wonderfully easy to work with. Frosty white and amazingly light, Styrofoam comes in all sizes

complicated, is actually just a combination of different thicknesses of flat carvings—1" for candles, ½" for reindeer, a thin sheet for the gracefully curling leaves all simply glued and mounted on 1" base.

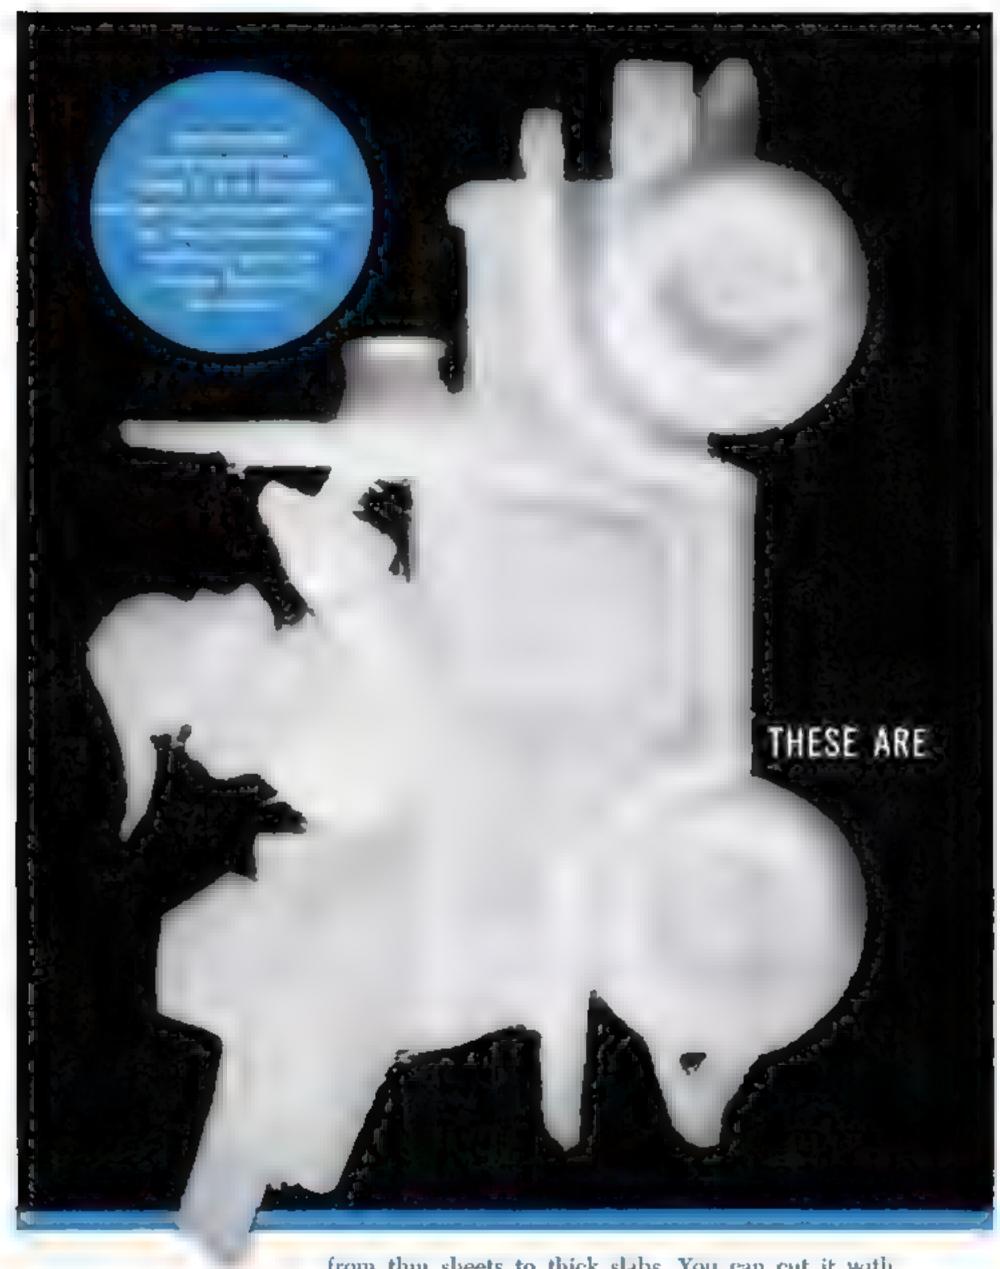

Patterns help you to reproduce these distinctive decorations in foam plastic that is easy to carve.

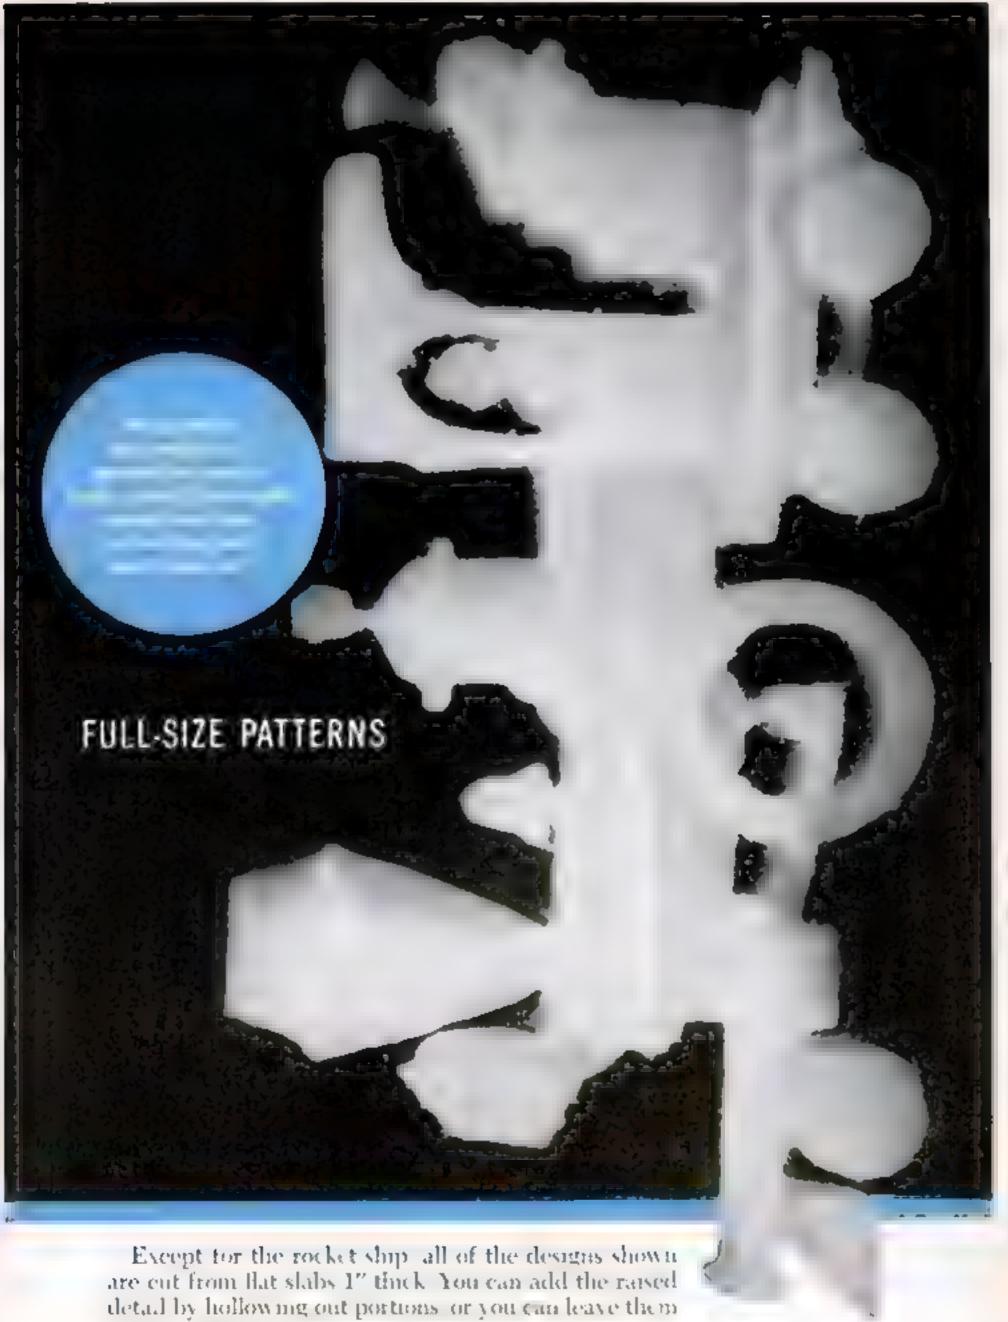

NOVEMBER 1954 [75

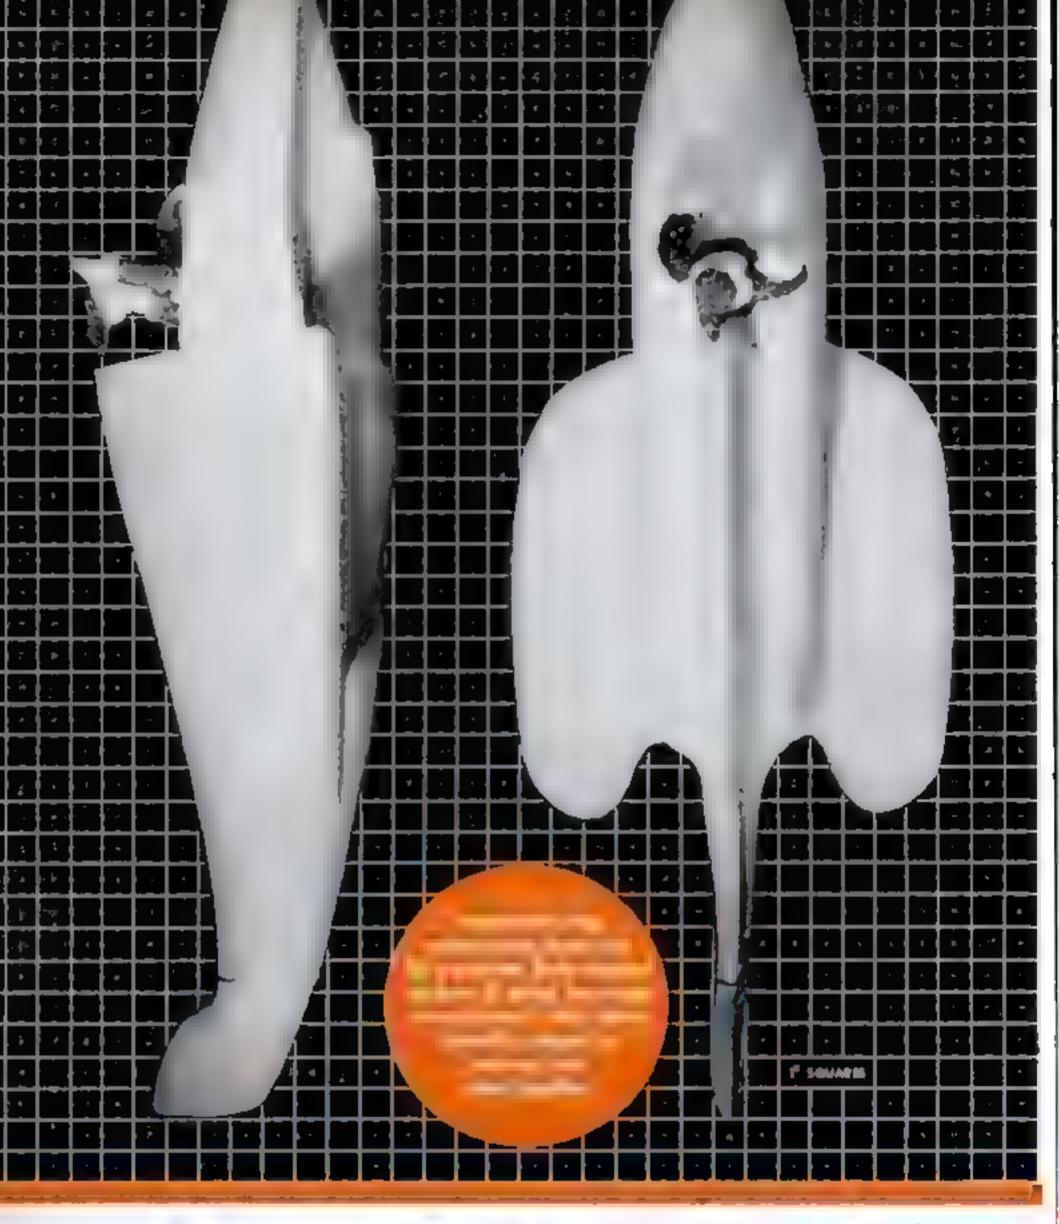

from that sheets to thick slabs. You can cut it with anything that has an edge—knife, coping saw, jigsaw or carving tool. Household cement glues it and rubber-base paint colors it. To smooth edges and shape contours, you just rub with a block of the same plastic.

simple silhouettes

If your wife has cookie cutters in animal shapes.

you can whack out a whole menagerie by heating the edges and pressing them gently into the plastic. Perfect circles can be made with heated tin cans and pan lids.

Styrofoam is available at many flower, hobby and novelty shops, or from the manufacturer, Dow Chemical Co., Midland, Mich.

Build your young craftsman a

Toy Power Saw

Underpowered for safety, this tool can rival Dad's at handling light stock.

By Herb Pfister

HALF the size of your basement table saw, but capable of performing every bit as well on light materials, this toy table saw will make a knockout gift to present to your son (age 10 or older)

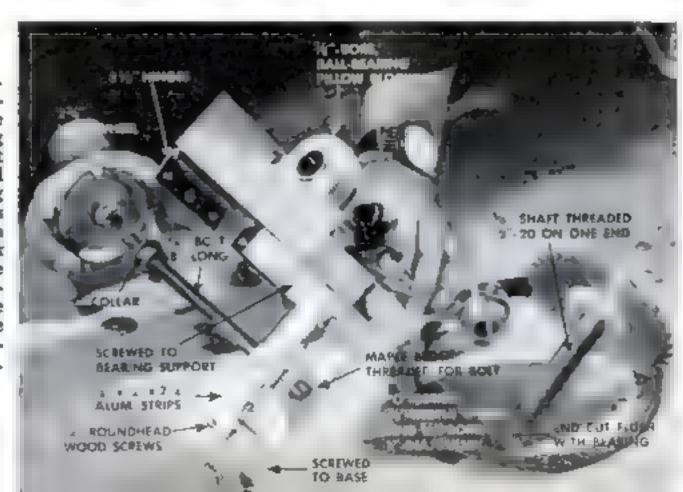

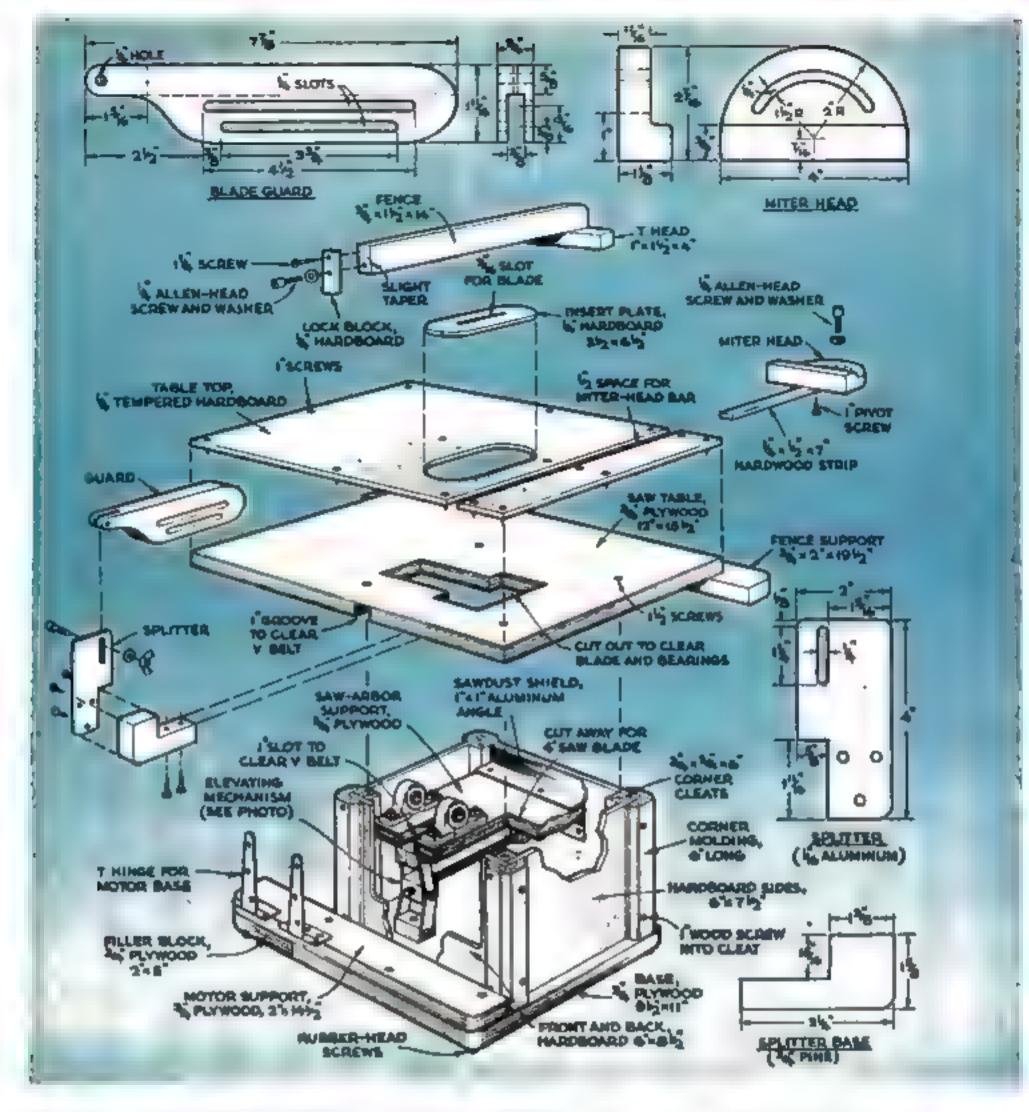

JOIN HARDBOARD SIDES with wood corner molding and corner cleats to make saw body. Open panel gives access to raising mechanism and permits easy cleaning of accumulated sawdust.

on Christmas morning. The 4" blade, powered by a safely weak 1/20-hp, motor, won't kick work back at him. But, with light feed and tender guidance, it will cut through softwood up to \$" thick. A simple lowering mechanism enables the blade to be adjusted to any height for cutting dadoes.

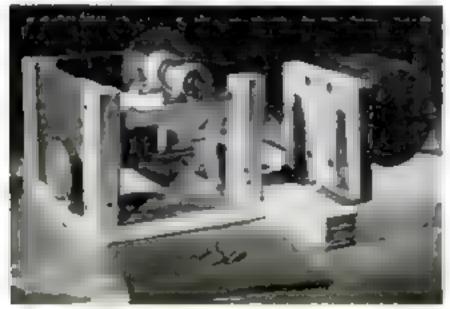

What you will need. Begin by purchasing a pair of ball-bearing pillow blocks and a short length of %" shaft, shouldered to %" and threaded on one end. Also a fine-tooth 4" blade, a 2%" handwheel and a set of O-series pulleys and V belt. The motor shown is a GE

JUSTMENT is shown removed but in relative position. Collar on long %" bolt bears against inside of hardboard panel when raising blade; handwheel bears against outside when lowering it. Maple block is threaded just like metal by running well-oiled tap in tap-size hole. Alummum angle keeps sawdust from getting behind hinges.

set up for test run. Side panel is removed to show mechanism installed. As handwheel is turned to the right, threads on the bolt pull maple block back, and the aluminum arms lower bearing support. Weight of motor on the hinged base keeps the %" V belt taut.

1/20-hp. job, wound for counterclockwise rotation.

Assemble the body and attach it to the base with 1%" wood screws driven up into the corner cleats. Assemble and install the saw bearings and raising mechanism and mount the blade on the shaft so that you can locate the opening in the saw table. Cut a piece of %" plywood to size, cut an opening in it for the bearings and blade, and screw it to the top of the

body. Cover the plywood with X" tempered hardwood, leaving a X" space between the two pieces to form a groove for the miter-head bar. Cut an opening in the hardboard around the blade and make a hardboard insert plate to fit it.

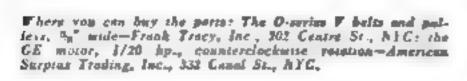

Supporting the motor. Screw a strip of %" plywood across the back end of the base to support the motor. Add a short length of plywood to the underside of the strip where it overhangs the base to keep the motor's weight from tipping the saw. Bolt the motor to a 6"-square piece of plywood and hinge it to the support strip. Mount a 1%" pulley on the motor using a bushing to make the %" bore fit the light 5/16" shaft. Run the wires through a toggle switch mounted on the side of the saw.

The fence, miter head and blade guard are made from pine. Cut the guard to shape, rout in grooves on each side using a fence clamped to the drill-press table to rout in straight lines, and clear out the center by making successive passes over your saw blade until the groove for the blade is about if wide. Slot the end with one saw cut to fit over the splitter. Shape the splitter from 1/16" aluminum and screw it to a wood base fastened to the underside of the table in line with the blade.

Making the fence. Use a piece of straight-grained pine for the fence and fasten the T head to it with screws and glue. It is locked in place by means of a small block of hardwood screwed to the outer end An Allen-head screw, threaded into the fence end, draws the hardwood block tightly against the table's edge.

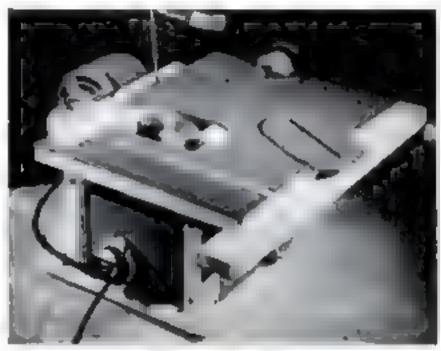

Shape the miter head from one piece of 14" pine and fasten it to a 4"-by-h" hardwood strip with one flathead screw which acts as a pivot. Clamp the strip in a drill-press vise and rout the curved slot for the locking screw by turning the head on its pivot while the router cuts.

Finish the saw with machine-gray enamel and paint table top silver, END

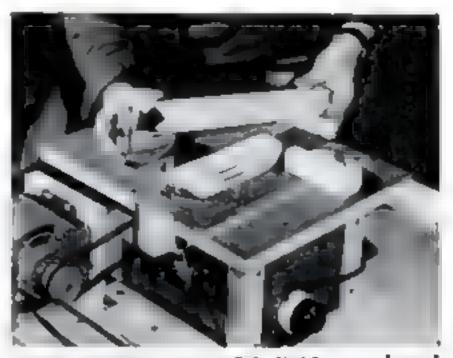

PLYWOOD TABLE is fastened to the body by countersunk screws driven into top ends of corner cleats. Center is cut away to clear the blade and top of bearings. Groove (arrow) provides clearance for the V belt.

SMOOTH HARDBOARD TABLE TOP covers rough grain of plywood. Screw narrow strip along edge first, then use miter-head bar to set spacing and form well-fitting groove. Insert plate drops in opening around blade.

from clear pine. Slight taper (arrow) on end of fence permits the hardwood block to be drawn tightly against the edge of the table when Allen-head acrew is hand-tightened.

Warm a little girl's heart with this

iniature Range

SPACE FOR TOY POTS AND PANS is covered by hinged donrs on each side. Oven has a clear-plastic window for keeping a careful watch on mild pies. Drawer beneath the oven holds other timy kitchen equipment.

PUSH BUTTONS GALORE control dummy burner elements. The elements shown are coiled wire soldered to brass strips, but added realism could be obtained by making the elements out of clear plastic and then lighting them individually with red flashlight bulbs.

Make-believe mud pies become almost real in this beautiful range that's just like Mom's.

By Lloyd M. Frazier

ANY little girl is at home with a range a toy one, that is. This scaled-down model will bring squeals of delight on Christmas morning and is no more difficult than building a wooden box and rounding the corners.

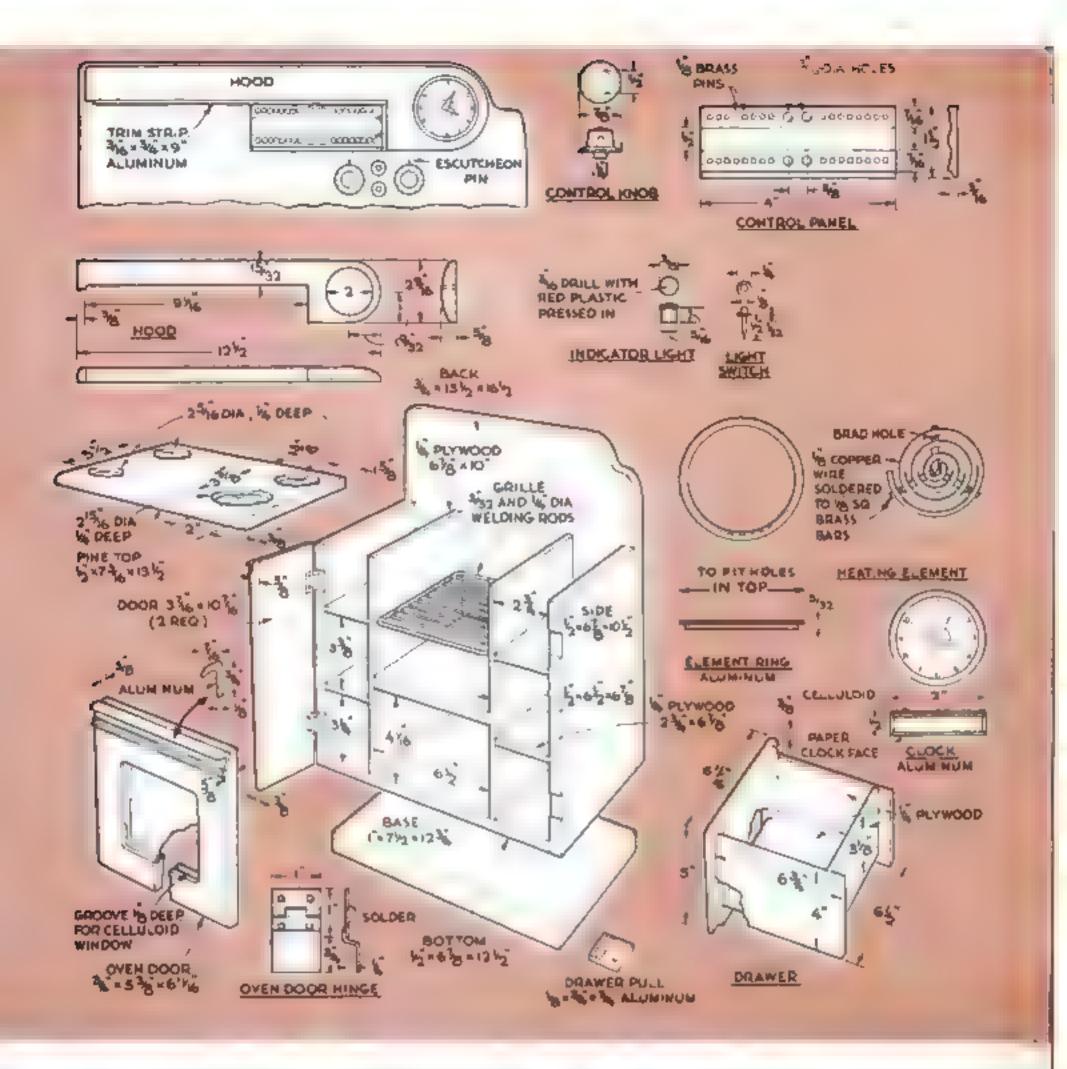

Edge-glue two pieces of X" pine for the backpiece and shape the upper righthand corner to match the hood. Make the top, sides and bottom from X" pine, glued and nailed, and attach to the back, using butt joints in all,

Use X" plywood for the partitions and side shelves and X" pine for the shelf that supports the oven door. Cut all doors from X" pine and fasten them in position on plywood. Then jack-plane a taper from top to bottom on all four pieces at once so they'll match. Cut out the oven-door window and groove the opening to receive a piece of heavy celluloid.

Hinging the doors. Use 1" brass hinges for the side doors and make offset hinges for the oven door by soldering extensions cut from 1/32" brass to a pair of 1" hinges.

Staple a short length of key chain to hold the oven door when open. Make the pan drawer from " plywood and fasten to the planed drawer front. Attach a " aluminum tab to the bottom for a drawer pull.

Hood and trim. Nail strips of aluminum counter molding to the tops of the doors for door pulls. Shape the hood from 1" pine, bore the clock opening,

and trun the under edge with 3/16"-by-

File a flat piece of 3/16" aluminum to shape for the control panel and drill holes for the 30 control buttons and indicator lights. Insert short pieces of s" brass rod for the buttons, making four longer to act as nails to fasten the panel on. Press four 3/16"-diameter disks of red plastic into the indicator-light holes.

Turning the dials. Turn the timer and oven deals from %" aluminum rod and scribe marks around their edges

Turn their two indicator lights from 5/16" aluminum rod and press red plastic into their recessed faces

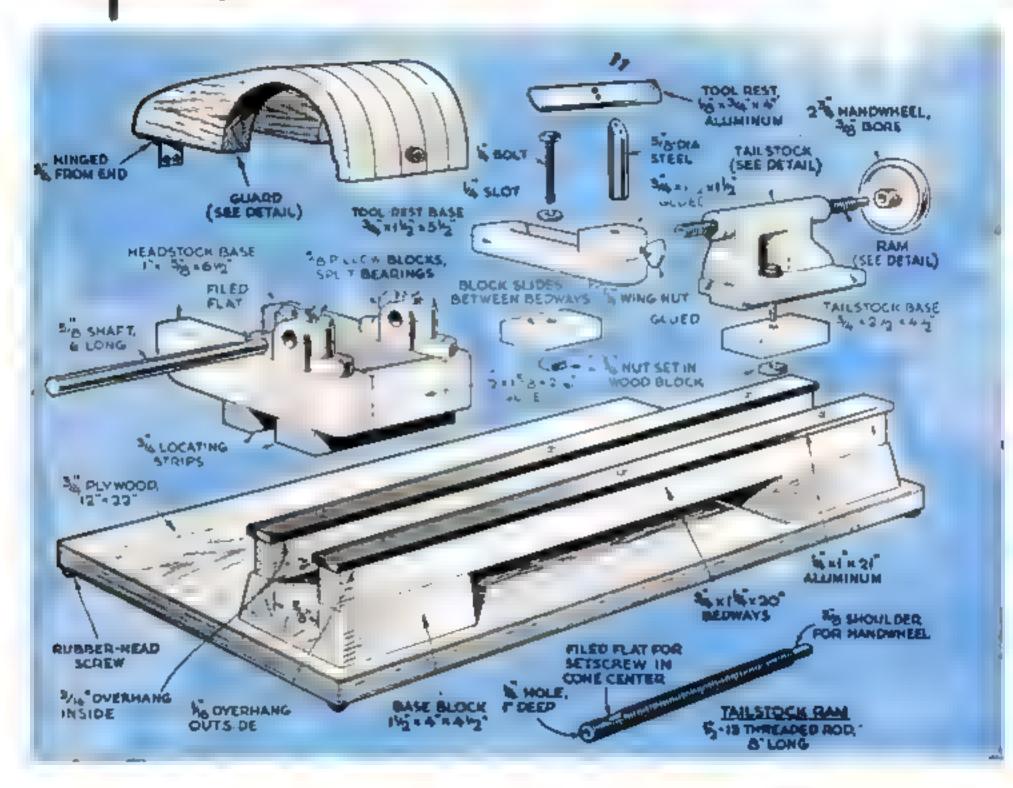

Turn the clock and burner rings from aluminum rod and coil 3" copper wire for the burners. Draw the clock face with India ink on colored cardboard.

Bend 4" welding rod into a square frame for the oven shelf and solder 3/32" wires into holes drilled in the sides

Finish the outside with white gloss enamel and the inside black. Paint the hood to blend with the tiny housekeep er's kitchen color scheme.

Delight your boy with this workable

int-Size Lathe

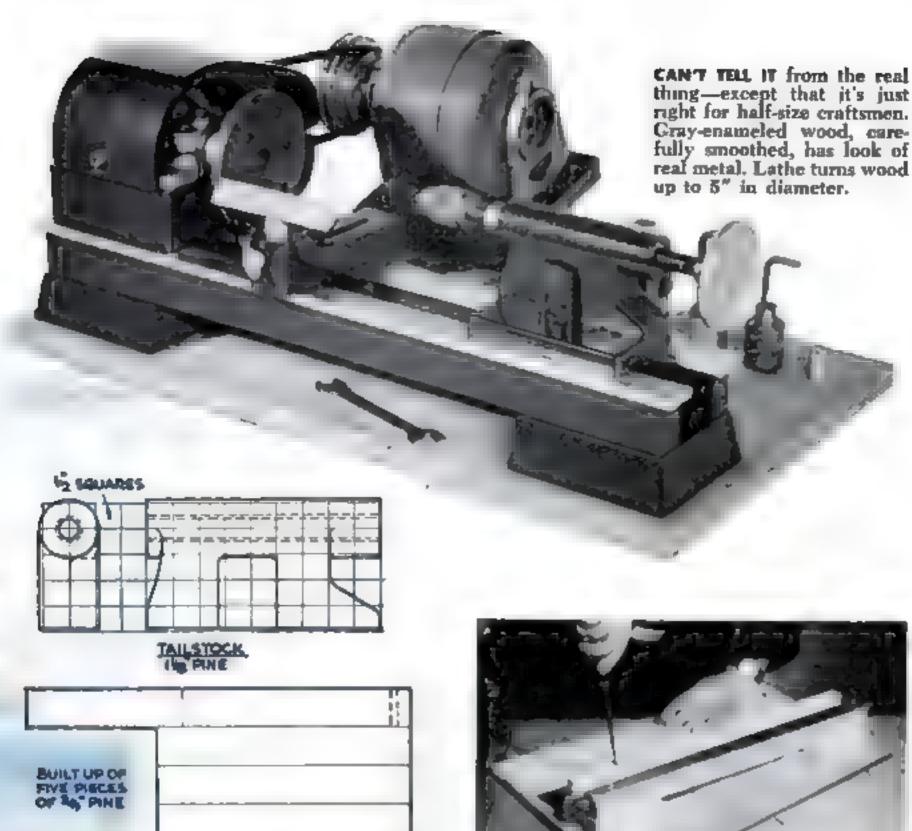

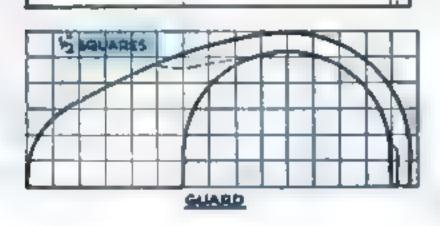

Made for standard lathe parts, this mighty midget swings a turning neatly for beginners.

You can start your boy on his way to many happy years of craftsmanship with this half-size reproduction of the king of power tools—a lathe. Made from parts you can pick up at almost any hardware store, it really works. With it, he can turn out wood parts for models,

a lamp for Mom, or even shape brass. On a %"-plywood base about 12" wide by 22" long, screw two blocks in line with each other. Bridge these with pine strips and screw on two 21" strips of %"-by-1" aluminum for the lathe bed.

Assembling the headstock. Make the headstock-bearing support from pine, with two strips to straddle the bed. Mount two split-bearing pillow blocks on the base so that the shaft center is %" behind the center of the lathe bed and

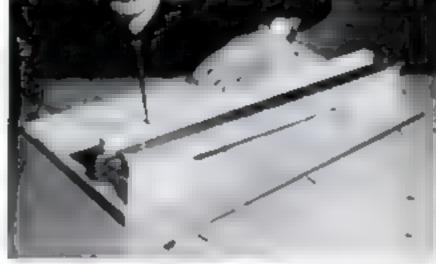

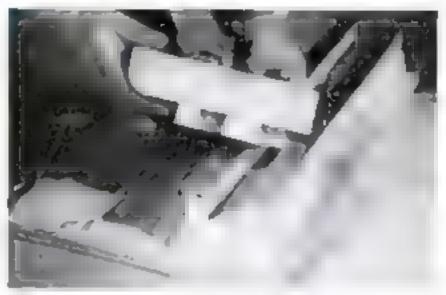

25" above it, providing a swing of 5".

Cut the large steps off two four-step cone pulleys (0 series, for 3" V belt) to reduce them to toy-lathe size. Mount one pulley between the bearings with two %" collars on both sides of the front bearing, Mount a 1/20-hp, motor on a 6" square of plywood and hinge it to the base so that its weight keeps the belt taut.

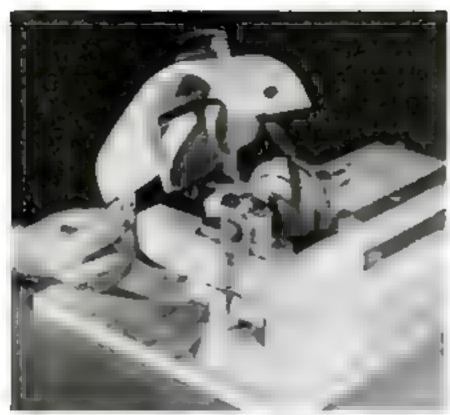

Cut two pieces of X" pine for the sides of the belt guard and three pieces for the

LATHE BED is built up of pine and aluminum strips. Screws through plywood base hold end blocks, beveled on three sides, in place. Strips are screwed down from above. Place aluminum strips so that 3/16" overhangs on inside edges, leaving 1/16" overhanging on outer edges.

HEADSTOCK is secured on bed by two pine strips on its underside that straddle the rear bedway, and a single long screw driven into the base block. Three screws, countersunk and filed flush, hold each alummum strip in place.

BELT GUARD is glued-up sandwich of five pinner of pine huged to back end of headstock-bearing support. Centerline of bearings is ¼" behind center of bed, eliminating excessive tooliest overhang when turning large diameters.

TAILSTOCK-LOCKING BLOCK has not embedded in bottom surface. Bolt through tailstock base clamps block against underside of overhanging aluminum strips. Lathe accessories shown in foreground are: ¼" tailstock chuck (left), tailstock cone center, headstock spur center, ½" headstock chuck and 3¾" faceplate.

for tailstock. Bolt is tightened in nut embedded in bottom of block cut to slide between wood bed strips. Note short pieces of dowel glued in baseboard to keep accessories right at hand.

center. Glue all five together and sand them smooth.

Aligning the tailstock. Cut a 24"-by-44" piece of 14" pine for the tailstock and screw it temporarily on a T-shaped base to slide between the bedways. Slide it up to a cone center on the headstock, mark the mating center on the tailstock block, and drill a 5/16" hole through the block. Run a 4"-13 tap through the hole as far as it will go, then finish the thread by filing notches on 4" Thredrod and twisting it through the hole.

Cut the rod to 8" and shoulder one end to \$" for a 2\$" handwheel. Remove the block, carve it to the shape shown, sand it smooth, and remount it with glue to keep the screws from slipping under headstock pressure.

Cut a small block of pine to slide between the wood bedways, drill a %" hole in line with the hole in the tailstock base and press a %" nut into the bottom for the tailstock-locking bolt.

Making the tool rest. Glue a 1%"square of %" pine to a 1%"-by-5%" strip
to form the tool-rest base. Rout a %" slot
along its center and drill a %" hole for
the tool-rest support. Make a block
similar to the tailstock-locking block for
the tool-rest locking bolt. Screw a 4"
strip of %"-by-%" aluminum to the
beveled end of a short piece of %" aluminum rod to make the tool rest. A
wing bolt tapped in the wood locks the
tool rest to any height or angle.

Finishing. Shellae the plywood base to resemble a bench top and finish the wood parts of the lathe with machinegray enamel or lacquer. Screw rubberhead screws under the base for scratch-free operation on the kitchen table

Slight alterations must be made in several accessories to adapt them to the lathe. The "" tailstock chuck will most likely have ""-20 threads in its shank. Drive a ""-13 tap into the bore to make it fit the ""-13 Thredrod. The tailstock spur center is bored "" for use on the Shopsmith headstock. Drill a "hole through a short length of "" brass rod to make a bushing to adapt it to the "" Thredrod tailstock.

Your little girl will love this

Tiny Refrigerator

PLENTY OF ROOM FOR PLAY. Two vegetable drawers, a freezer compartment and meat drawer beneath it provide storage space for make-believe perishables. The shelves are made out of welding rods, but wire clothes hangers would do just as well. The box itself is made of wood.

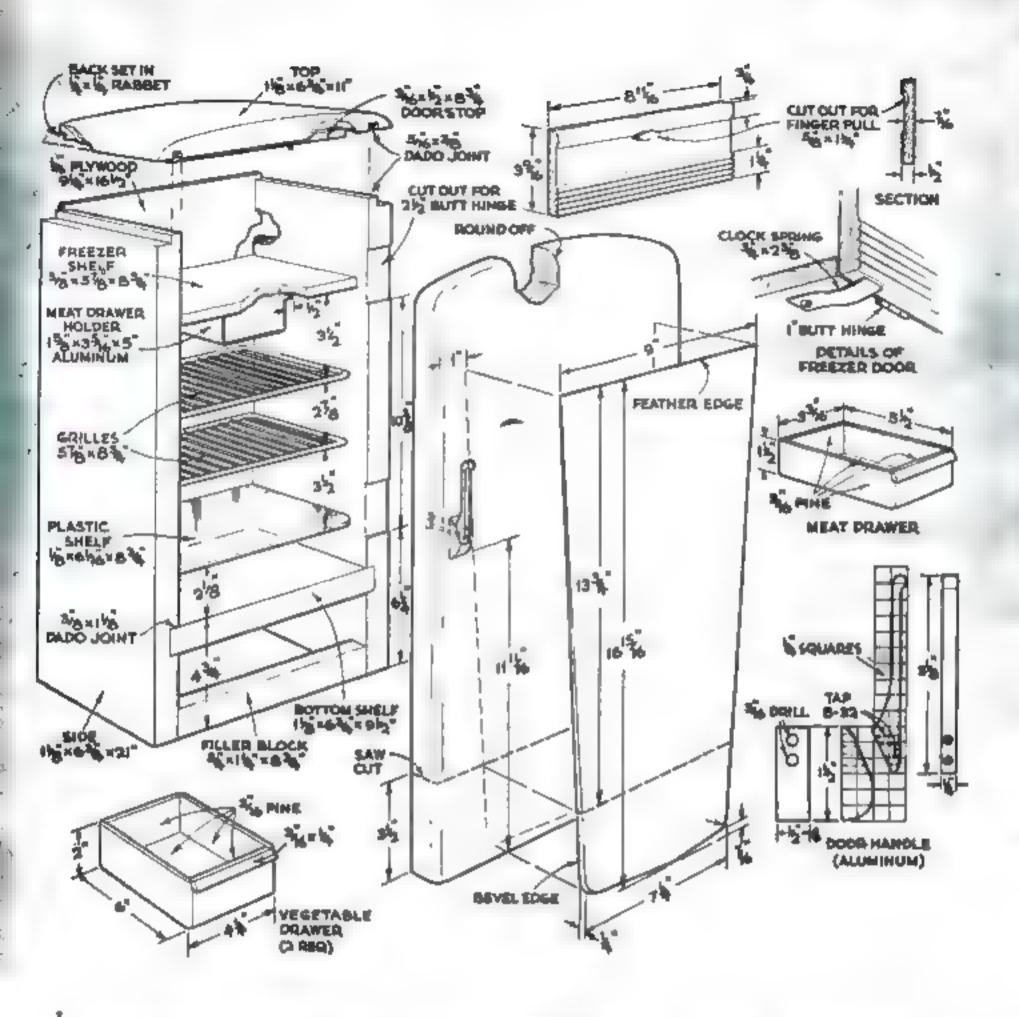

Complete with freezer unit and removable food trays, here's a fine companion for toy range.

A TOY refrigerator is a necessity in a little girl's kiddle kitchen, and one as handsome as this scaled-down model is hard to find at a price that fits the toy budget.

Make the sides, top and bottom from 1%" pine, fit them together for a trial assembly, then separate them and cut the rabbets along the back edges for the "hardboard back. Fold a sheet of heavy paper down its center and draw half the outline of the refrigerator body on it. Then cut out the shape and use it as a template for shaping the body and the door.

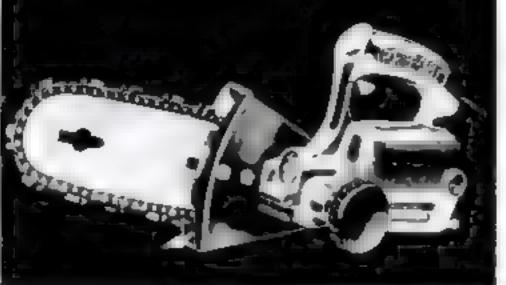

Shape the door and lower front cover from one piece of 1%" pine. Cut the raised panel from %"-thick pine, bevel the edges and glue it on the face of the door. Then plane it to a feather edge at the top. Sand smooth and cut off the lower part to make the lower front cover. Hinge the door to the body with

2%" butt huiges and glue the lower cover in place directly beneath it. Screw a friction cupboard catch to the inside of the door to hold it shut.

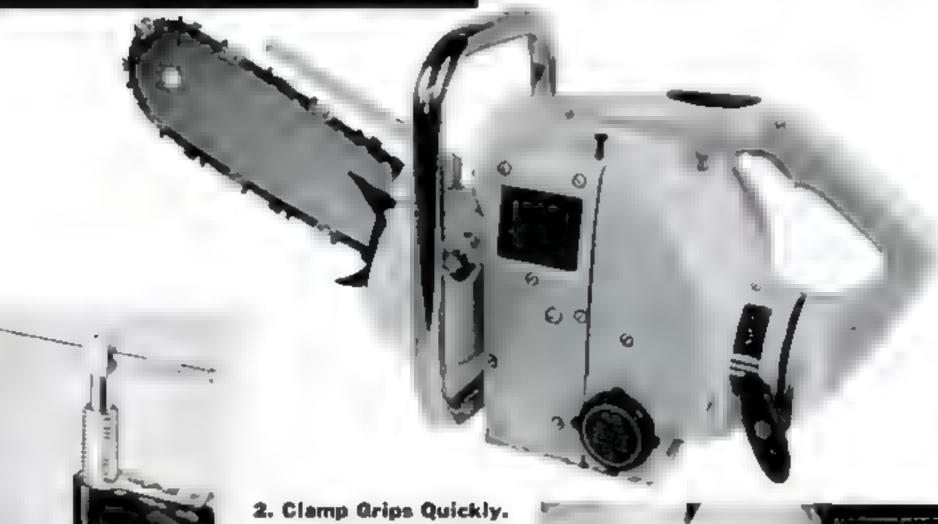

Cut the door handle and its base from aluminum and drill holes in both parts for the mounting screws. Tap the holes in the handle and drill the base holes for clearance. Insert the screws through matching holes in the door, through the holes in the base and thread them into the tapped holes in the handle to assemble and mount it at one time. Make the freezer compartment by nailing a 3" pine shelf inside the box and hinging the freezer door to it. Trim on this door can be extruded aluminum or wood beading painted silver.

Fabricate the food shelves by bending X" welding rod into two rectangular frames and inserting 3/32" rods in holes drilled in the front and back edges. A piece of X" plastic makes a durable shelf over the vegetable drawers. Paint the refrigerator inside and out with white ename! and add a name plate.

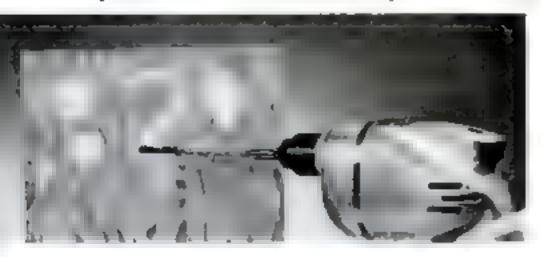

X New Tools

1. Baby Chain Saws Go Anywhere. Light enough to wield with one hand, the electric saw at left weighs only 7% lb. yet will fell a 14" tree. The saw below weighs only 20 lb. with self-contained gasoline engine and will cut timber up to 3' thick.

You can set this C clamp in a second without screwing it all the way in and out each time. The outer barrel is slid up against the work, locked, then the timer stem is screwed up tight. A quarter turn of the barrel releases it instantly.

3. Drill Bit Saws Holes. Cutting openings in walls or internal designs in wood is easy with this %"-drill bit. Sharp spiral teeth let it both drill straight and saw sideways in any direction. It cuts wood, plaster and other materials up to 1" thick.

4. Small Wheels Make Big Grinder, You can stack up to five of these flexible grinding wheels on a single shaft, covering broad work areas quickly. The wheels, each 1" wide, come with different-length shafts depending on the number combined.

Colonial Cupboard Is Easy to Build

Got a knotty storage problem? This slim knotty-pine locker will lick it—and dress up your hallway, too.

By Karl Greif

If YOU have an Early-American-type home and are stumped for storage space, this shallow colonial cupboard should be right down your alley—hallway, that is, It's as frugal as Old Mother Hubbard in saving valuable floor space, Yet it has a surprising amount of shelf area.

Naturally, your cupboard must be adapted to the space at hand. But whether it does a three-way stretch or shrinks to the proportions of a totem pole, the construction remains the same.

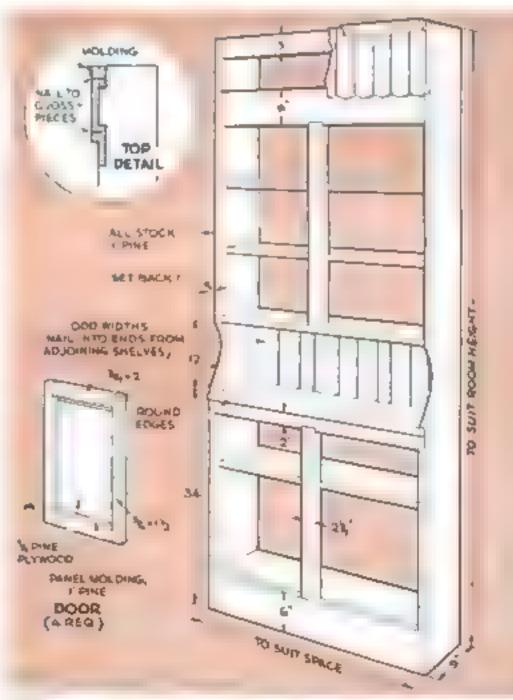

Sides. The two side members are ripped out first. They should extend from floor to ceiling. A curved section is removed from the forward edge of one side if the cupboard is to butt against an angle in the wall, or from both sides if it is to stand free.

Shelves. Make the shelves next, and glue and nail them between the sides. With the exception of the open shelf, their forward edges are recessed X" from the front of the cupboard. This will provide a flush fit for the doors.

The open shelf should project an inch beyond the face of the cupboard. It also has small extensions at the front, to lap the cupboard sides.

Front and back. Three cross members frame the doors. The top of the kick-board butts against the facing edge of the bottom shelf, and the intermediate crosspiece bears against the bottom of the projecting shelf. The top member may be extended to the ceiling or, as shown in the detail drawing, it can be

projected just high enough to support the vertical, scalloped strips that ornament the cupboard top. In that case, another supporting piece must be nailed between the cupboard sides at the top. Both the top and intermediate cross members have cutouts at their centers to receive door-separating uprights,

SIDES, SHELVES, FACING AND DOOR FRAMES for the cupboard are all cut from %" stock. True knotty pine is best, but well-seasoned and less expensive common pine will do.

Random-width strips form the back of the open cupboard section. Plane their butting edges to form shallow V grooves, and glue and nail the strips between the shelves above and below them.

Doors. The doors are of simple frameand-panel design. Cut grooves on the inside edges of the butted frame pieces to grip k" plywood panels and dress up the insets with molding. Attach the doors to the cupboard with authentic colonialhinge reproductions and use matching latches.

Installing and finishing. Set the cupboard in the space you built it for, profile the top and bottom to fit your baseboard and ceiling moldings, and nail it rigidly in place. A few strips of molding around the top and you're ready to sand and finish this handsome addition to orderly living. Use a commercial maple stain, sealing it with shellac.

ROOM FOR A SPACIOUS LINEN LOCKER? You'd hardly think so, but see what the author did with the 9" strip of previously wasted hall space outlined by the carpeting and baseboards.

GRACIOUS AND FUNCTIONAL, cuphoard is an eve-filling showpiece. The open section and scalloped top add beauty to what otherwise would have been just a practical cabinet.

New for the Handy Man

1. Paint Remover Sprays
On. With a new spray can, you can quickly spread a smooth, even film of paint remover over large areas or in corners that are hard to reach by brush. The non-flammable chemical cuts through difficult-to-remove varnish as well as paint, shellae and lacquer.

2. Floor Tile Has Own Adhesive. Just peel the film off the back of this new rubber floor tile and it's ready to lay. The tiles, which come with the adhesive already on, are simply set in a solvent that's swabbed on the subfloor first. They're available in 52 colors and styles.

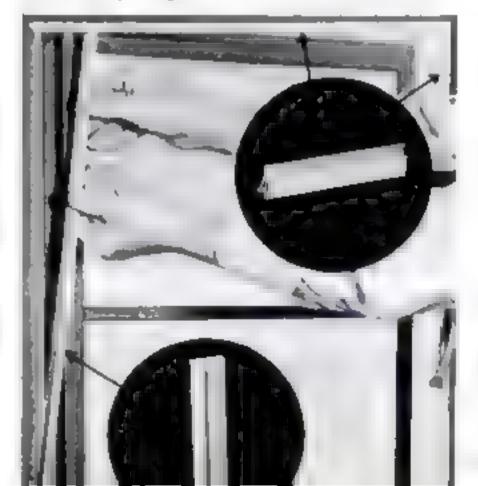

Further information about the products shown on the page on be obtained from L. E. I. Du Pout de Armours & Co., 1629 Nemours Bidg., Wilmington Det ? Rahom flor Froducts, Tuscambia (Muscle Shoats), Ala.; 3 Come Herric Products, 234 Dahall St., Providence, R. L.; 4 Mackingburg, Duncan Co., Box 1197, Oklahoma City, Okla.

3. Adapter Takes
Grounded Plugs.
Tools and appliances
that have three-prong,
grounded plugs can
be used in standard
outlets with this adapter. The adapter is
plugged into the outlet and its grounding
wire attached to the
plate screw, then the
three-wire cable is
plugged into the

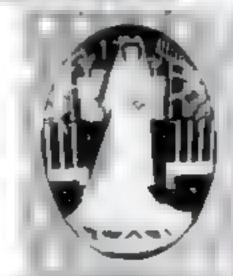

adapter.

4. Weather-Stripping Casement Windows. You can weather-strip casement windows without special fasteners by simply shipping this metal stripping over the window frames. Using ordinary seissors, the strips can be mittered at the corners and cut to any length to fit odd-size windows.

Here is a neat darkroom stunt: With a homemade cardboard mask and a suitable negative you can

Frame a Photo with a Photo

By Shep Shepherd

EVERY amateur photographer sooner or later runs into the problem of thinking up new ways to display his favorite pictures. One dramatic way is to use photographic borders.

All you need, aside from the usual darkroom equipment, are two negatives, a cardboard mask, a rider and a bottle of India iik. Although you can make any size print, I have found 11" by 14" the most pleasing and the easiest to handle. First, prepare the mask by cutting a 7"-by-

9%" rectangle from the center of an 11"by-14" piece of cardboard, leaving 2" along both sides and the top and 2%" at the bottom. (The stiffener in a package of enlarging paper is excellent for the purpose.) Mark frame and cutout

piece so that the Litter can be replaced in the same position.

The border subject should have some relationship to the picture that is to be framed. A woven wire fence might be used for a picture of domestic animals. Tree bark would make a good border for birds or squirrels. An expanse of lace is appropriate for a picture of a bride.

Place the entire mask over a piece of plain white paper on the easel, Remove the border section, holding the center position, to compose and focus the border negative. Then substitute enlarging paper and make the border exposure.

Return the enlarging paper to its lightproof container, remembering which is the top end. With plain paper in the easel and the border section of the mask over it, compose the subject negative. Then expose it on the same sheet of enlarging paper.

While photographically matted pictures are unusual in themselves, they can

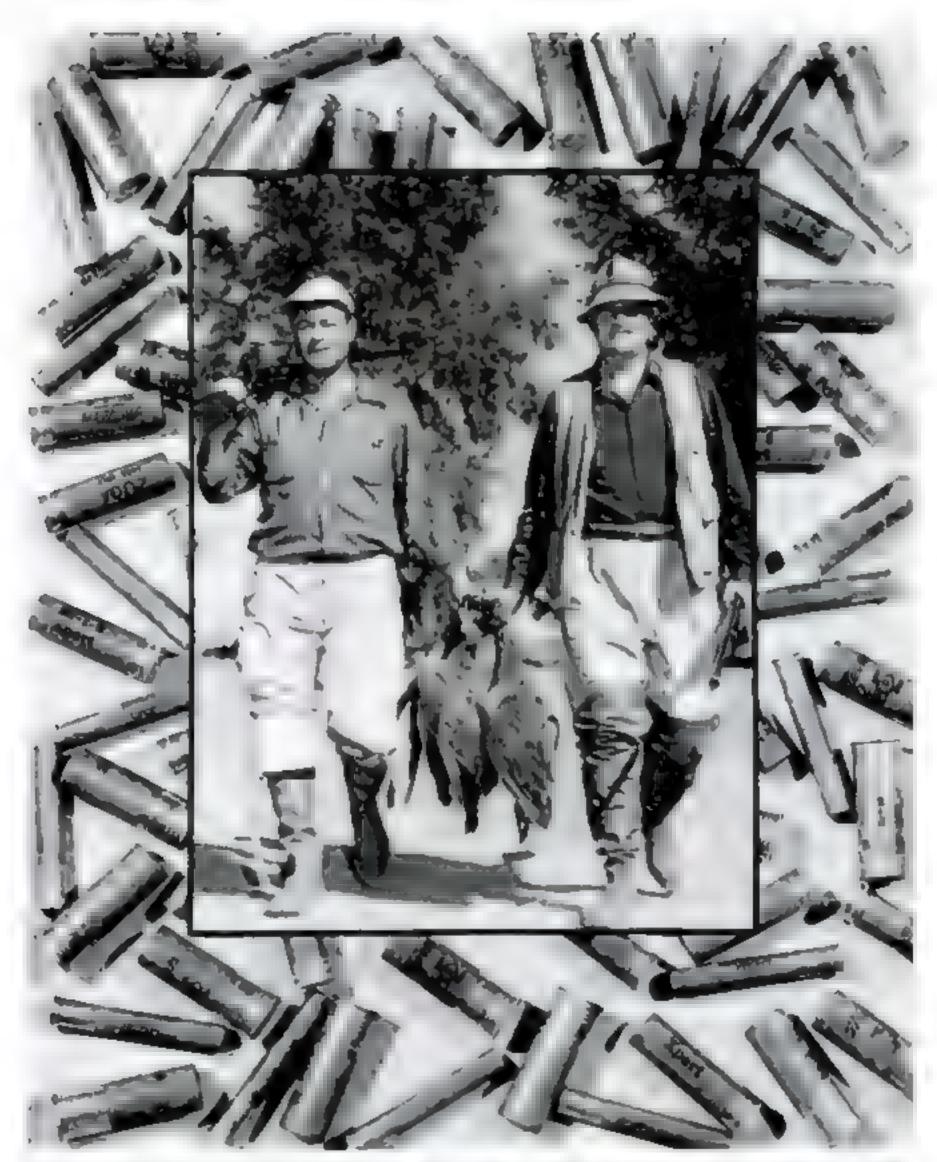

THE TWO-PIECE MASK, at left, has marks along upper edges. Placed so, inner panel will match closely despite any errors in cutting.

ENLARGING EASEL aligns paper and mask even though both must be changed during the printing process. Mask openings may be ovals, diamonds or stars instead of a plain rectangle.

INDIA-INK BORDER, easily drawn with a ruler and a drafting pen, sets off the photo from its mat and conceals any small misalignments in use of the mask or overlaps in toning.

This hunting scene is appropriately framed with a close-up photo of some shotgun shells.

be made outstanding by selective toning with chemical toners sold in camera-supply stores. Following the simple directions given with the products, you can tone either the border section or the center subject. The part of the picture that is not to be toned should be covered with rubber cement brushed on the damp

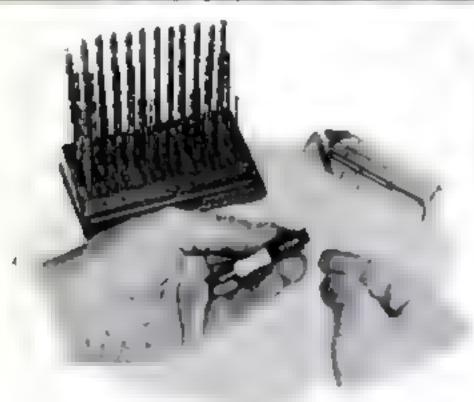

print, It can later be rubbed off with your fingers.

Ruled ink lines along the seams joining the subject picture and the border complete the operation. Use India ink and an A3 pen that makes a line about 1/16" wide. This will cover any unevenness in printing or toning.

Old Containers Are Put to Work

Used coffee cups found around most garages and airports make handy containers for small parts during disassembly. If the parts and cups are to be stored away, a grease pencil is best for labeling the paraffined variety of containers.—Bob Blatt, Larchmont, NY.

Drills Can Be Used as Gauges

SINCE numbered drills are made of closely

Other gaps such as valve push rods and timer points can also be checked with drills of suitable diameter. Any mechanic's handbook carries a table giving numbered drill diameters, running from .0135" for a No. 80 drill to .2280" for No. 1. Use only drills with rust-free, unmarred shanks.—Elbert

dimensioned stock, they can double as gauges. Here a No. 60 drill is being used to check the specified .040" gap of a

Hacksaw Blade Spreads Glue

HACKSAW

A SCRAP of broken hacksaw blade will spread glue quickly over large, flat areas. The teeth let the glue flow easily but keep it to a smooth, even depth throughout.—

A. H. Waychoff, Phoenix, Ariz.

Metal Provides Door Clearance

Robberson, Port Washington, N. Y.

A PIECE of scrap 20-gauge sheet metal about 1" by 8" added to the carpenter's toolbox can be used as a clearance gauge for fitting doors. It's just right for a tight fit. Carry a thicker piece for looser fits.—Werner Kraatz, Santa Cruz, Calif.

Shield Catches Drill Chips

WHEN you drill into ceilings or other overhead spots, a tin-foil pie plate slipped over the bit will keep falling chips out of your eves and off the floor. The soft foil won't mar the surface and cushions the drill if it suddenly punches through.—M. C. Fleming, Pittsburgh, Pa.

spark plug.

My House with a Pump

Old Mother Earth provides heat in the winter, cooling air in the summer, for this owner-designed house without a furnace.

By John R. Linders

THEN I built my home the mason insisted on tucking a furnace connection into the fireplace flue. He just couldn't accept the idea of a house withont a furnace. Maybe he doesn't believe

in my heat pump yet.

That was five cold and snowy winters ago. I still haven't got a furnace. And the house has stayed at a cozy 72°. The summers have been hot, as they usually are around Cleveland, but the thermometer indoors never goes above 70°. You see, I can also pump heat out. The same unit warms in winter and cools in summer. Total expense-for both heating and cooling-has been less than you'd expect just to heat a house this big

The big advantage, though, is cleanliness. There's no dust and grease, which you'd be bound to get with even the best fuel-burning plant, My wife likes light colors. She bought a pair of palegray divans last year and the upholstery still is clean as new. The walls in the bedroom and bath have their original paint job, now five years old. There's not a streak of dirt to be seen.

"Refrigerating" Machinery Heats House

If you came down into my basement which, incidentally, keeps remarkably dust- and dirt-free, too-you would see the secret of clean, inexpensive comfort. It looks like refrigeration machinery. And that's exactly what it is.

There is a three-horsepower motor,

"three-ton" compressor and a lot of copper tubing containing Freon refrigerant. Roughly, the system has some 20 times the capacity of a kitch-

en refrigerator

You can see only a little of the copper tubing. There are 1,600 feet of it buried 5% feet deep in trenches in the ground around the house. The Freon gas circulates through this network, picking up heat from the ground itself. Even in midwinter, the gas comes back into the house warmed up to around 40°.

Pressure Makes Gas Rot

The warm gas then goes to the compressor, which raises its pressure from 25 pounds to 120 pounds. When you compress a gas, you increase its temperature—you have probably noticed that when using a tire pump. The Freon gets up to 120°.

All I have to do then is blow air over the hot Freon coils and into the rooms. This is accompanied by a standard forced-air system, with ducts, blower and filters just like those in a gas or oil heating plant.

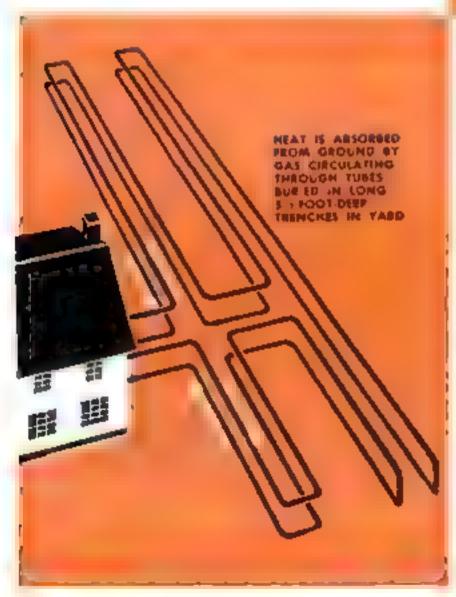

The Freon loses its heat to the

trick is to use energy (electricity) to make the cold object rolder and move the extracted heat mto the house, where it is added to the air. Linders' system (below) removes heat from the ground. Other types of heat pumps extract the heat from well water or, in milder climates, from the outside air itself.

WALM AN COOK AIR FROM ROOMS

GAS GIVES UN HEAT 3D A.B AND TURNS TO DOUBT

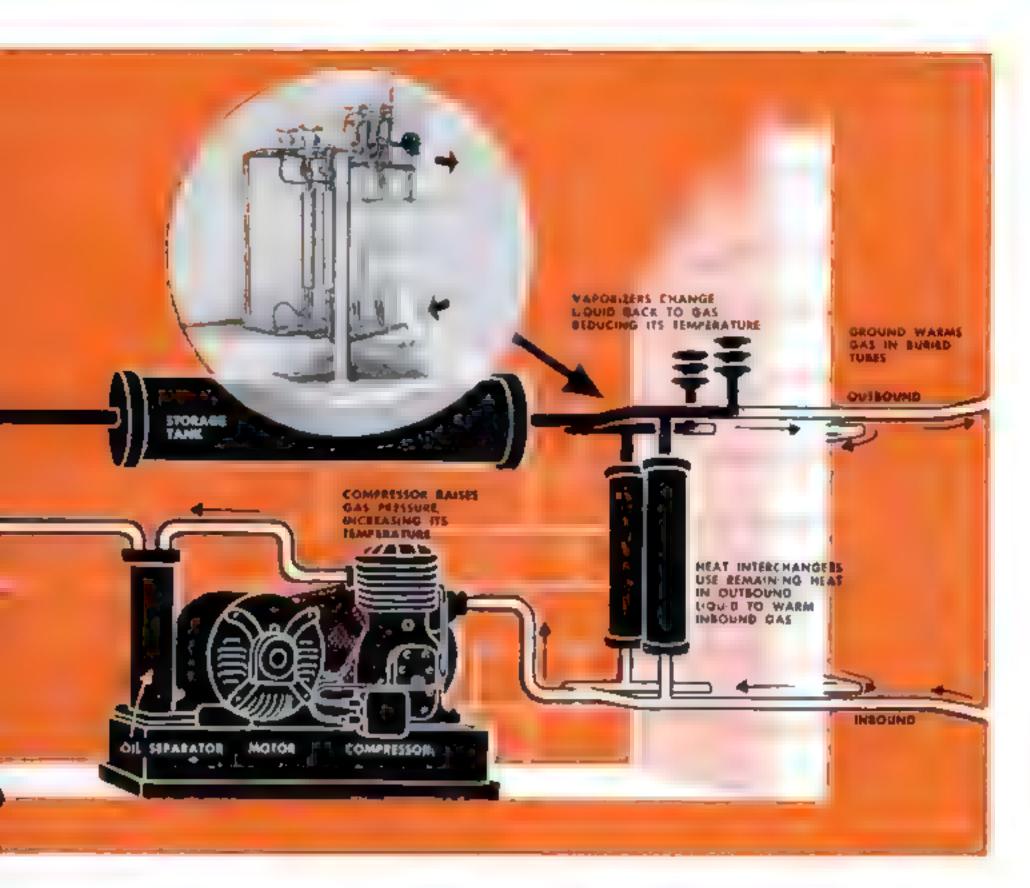

HOW OUTDOOR COLD WARMS A HOUSE. The

air and changes into a liquid. The liquid flows to a vaporizer—a nozzle that squirts the liquid back into a gas and reduces its temperature to about 80°. Then the cold Freon is sent back outside to pick up more heat from the ground. In summer the system is simply reversed—the Freon is chilled by the ground, comes inside cold and absorbs heat from the house air.

The only expense is for electricity, I use a whale of a lot—around 1,500 kilowatt-hours a month—but that includes the freezer, refrigerator, kitchen range, hot-water heater, washing machine and clothes dryer, too, Because consumption is so high, the power company gives me a cheaper rate and my bill averages only \$25 a month, for everything.

The heat pump saved money in the original cost of the house, too. If I had

wanted a conventional hot-air furnace, its chimney should properly have been placed smack in the middle of the house. That would have eaten up valuable living space and required relocation of the fireplace or a second chimney for it. The heat pump needs no chimney. I use the space for a built-in TV center, and my fireplace is where I want it: on an outside wall with its chimney outdoors

Casements Were Unnecessary Expense

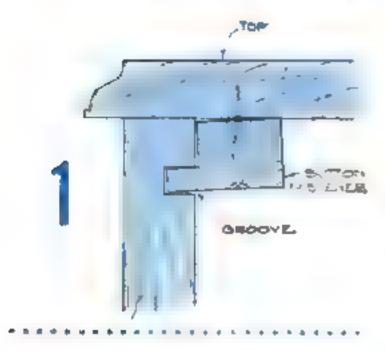

I could have saved still more on construction costs. The house has casement windows with separate storm sash. But we rarely open them. Permanently sealed double-glass windows would be cheaper and more effective.

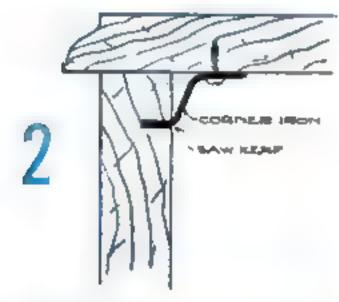

The only bug I had to get out of my heating plant was a slight amount of noise when the compressor started and stopped. Knocking out the concrete frame around the machine's cork mounting mat quieted it considerably. And the acoustical tile I am now putting on the basement ceiling should solve the problem completely.

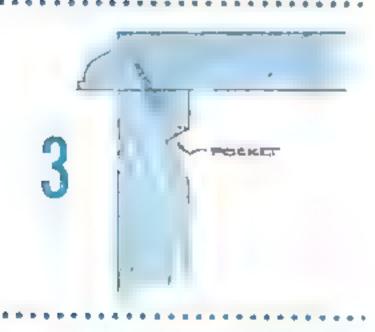

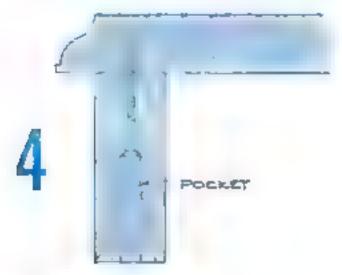

CLEANING BILLS are slashed by heat pump, which burns no fuel, can create no grease, smoke or dust. Above, Mrs. Linders shows off her drapes, cleaned but twice in five years.

8 Ways to Fasten a

By William B. Eagan

NE of the best ways to tell whether you are getting the most for your money when buying furniture is to look at the hidden parts-the sides and bottoms of drawers, the undersides of tables, the backs and tops of cabinets. One such place to look, and also a place where you, as a craftsman, must apply good woodworking practice if you are to produce the best construction, is in the fastening of furniture tops to side rails. There are two general methods, each with variations, for such fastenings. One allows for expansion and contraction of the wood, the other keeps the top stationary. The stationary fastener is usually employed where the top is of frame construction or made of laminated materials.

A fine example of the free-moving fastening is the button fastener in Fig. 1. The insides of the rails are grooved near the top before they are glued into place. Then wooden blocks are rabbeted on one end so that the tongues fit into the rail grooves and the other ends fasten to the top at intervals. Care must be taken in making the rabbets so that there will be a slight gap between the block and the top. Thus, when the screws are driven in the top the block will be pulled down hard upon the rail, yet will be free to move when shrinkage occurs.

A modification of the button fastener is a small piece of flat iron bent at right angles as in Fig. 2. One end fits into a saw kerf made on the inside of the rail and the other end is fastened to the top with wood screws.

In the stationary-fastener group, there are many variations. This group is more easily installed than the free-moving type. The pocket fastener, Fig. 8, is a good example of the stationary type, although it is just a bit more time-consuming to produce than others. Using a gimlet or twist bit, a hole is first bored down through the rail at a slight angle from the upper edge. Then a pocket is made for the screwhead by either boring a large hole

Table Top

How good a craftsman are you? The attachment method you pick for this job will reveal your ranking.

or cutting a recess with a gouge. The screw is then driven up from the inside into the top.

An equally satisfactory method of pocketing the mounting screw is shown in Fig. 4. A hole, large enough for the head of the screw, is bored part of the way through the rail with an auger bit, after which the remainder of the hole is bored with a small gimlet or twist bit and the screw inserted and drawn tight.

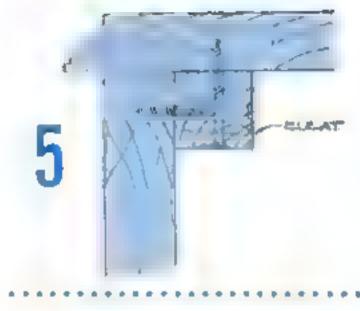

The most frequently used stationary fastener is the cleat type, seen in Fig. 5. It chasists of %" or %" square-section wood strips. These are fastened to both the top and rails. Holes are first bored and countersunk into the cleats at right angles to each other. The cleats are then screwed to the under surface of the top and the sides of the rails.

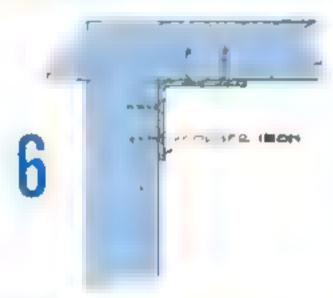

Probably the quickest to install and strongest stationary fastener is the corner iron, purchased at any hardware store for a dune of so, depending on size. The corner iron, Fig. 6, is a piece of metal bent in a right angle with two screw holes in each leg of the angle. It is simply screwed to the top and rails.

The dowel method, Fig. 7, is the kind usually found in Early American pieces. The top is secured by simply boring holes through the face and rails, and inserting dowels, which are sanded flush with the surface of the top. For a novel effect, dowels and top may be of contrasting woods.

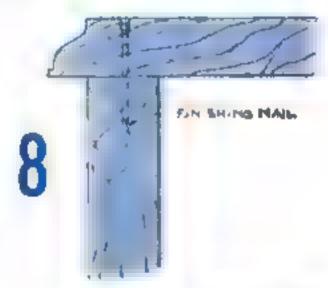

Although nailing, Fig. 8, is the simplest method, it is not recommended for good furniture. However, it will serve its purpose for holding a temporary top or where it doesn't matter if the top eventually pulls loose.

In applying any of these fasteners, you should remember that you won't have a satisfactory job if the top and rails are not true. A fastener is never intended to act as a clamp for forcing the top down; it is merely a means of holding the top in place.

You can monogram your stationery, clamp light gluing jobs and make block prints with this easily built

Embossing Press

By Walter E. Burton

A THROWBACK to the old letter press, this midget will emboss initials, or any design you can shape from wire or carve, on ordinary paper and envelopes. Other uses include flattening photos and making linoleum-block or rubber-type prints.

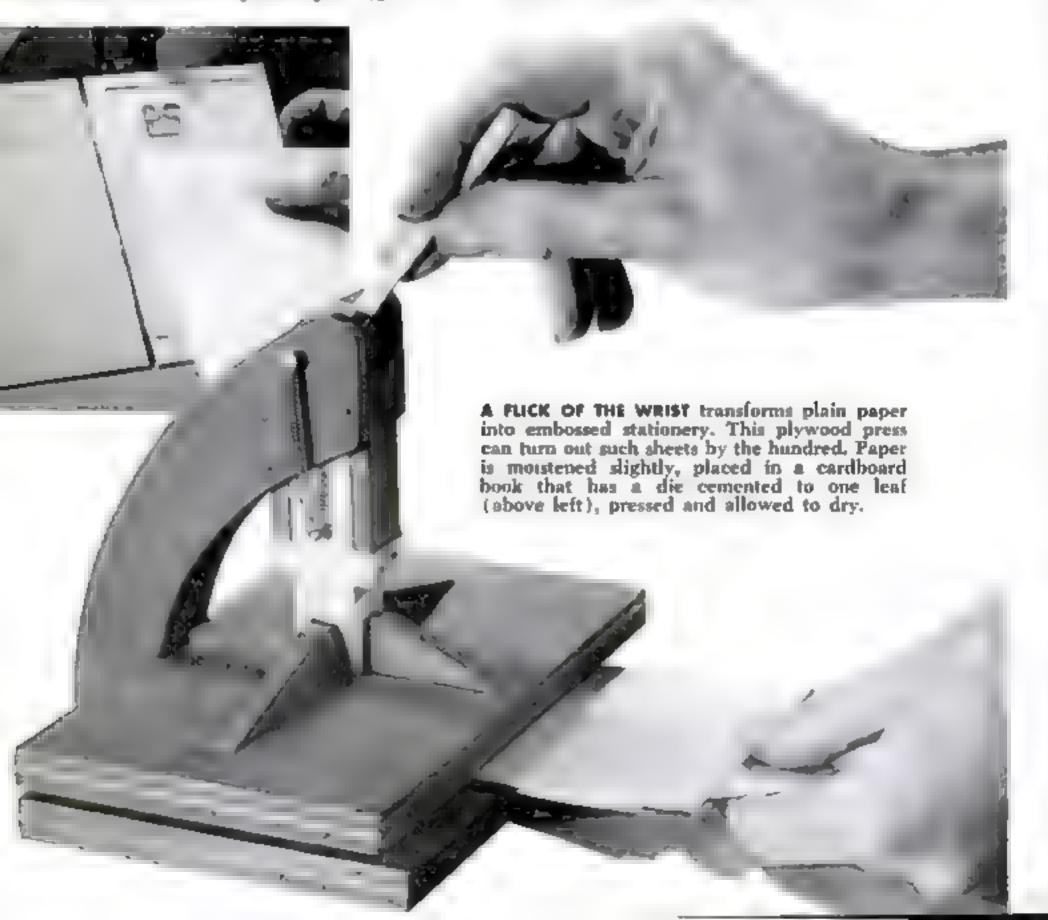

Building the press. Use plywood for the base, platen and curved uprights. Cut the latter to the pattern on the next page and fasten to the base with glue and screws. Use the platen post (prefer-

ably solid hardwood) to gauge the placing of the upper guide strips, between which it should slide freely.

In mounting the cam, put washers on each side if necessary to make it turn with some friction. Lock the pivot nut by heading the bolt over it lightly. Lubricate cam and post head with soap.

Brad on two chps cut from tin plate or sheet aluminum to keep the lower end of the post within the guides. Turn in wood screws to anchor the springs, cutting these to length by trial.

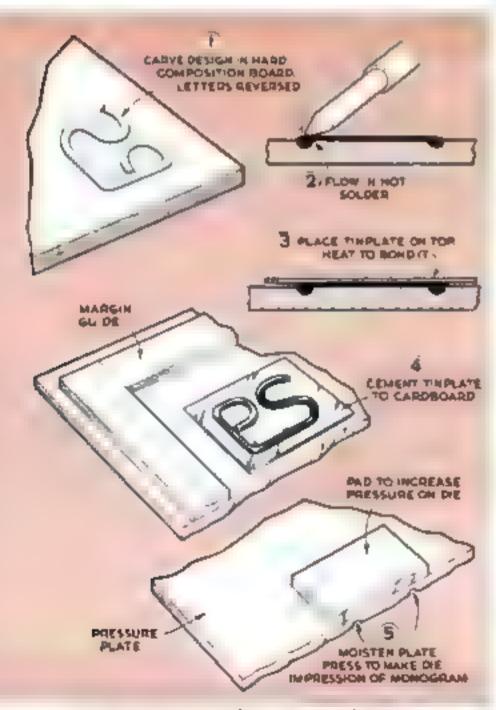

How to embous. Some costume jew-

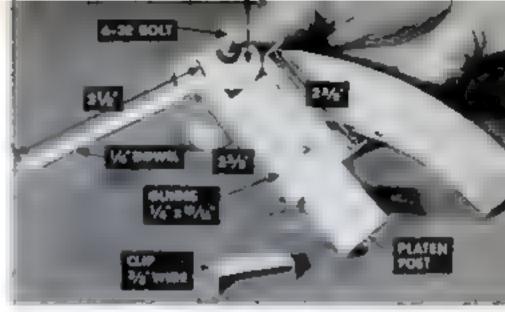

elry can be used as embossing dies. You can shape designs from wire, or cast them in a carved mold, using soft solder.

Note paper is most easily embossed in a "book" having the die in the lower leaf and a matching impression in the upper leaf. The carved mold made for a cast die can be used for the top leaf. If cardboard is used, moisten it and squeeze the die in with a vise. Hinge the leaves together with cloth tape and cement the die to the lower leaf in register with the impression. Glue on cardboard stops for locating the sheets to be embossed.

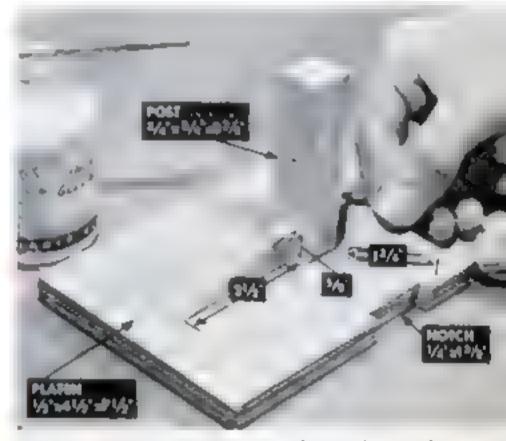

Printing with the press. Platen travel being small, the printing block must be thin. Cement the linoleum or rubber type to a sheet of metal larger than the platen, and bend its edges over the platen. Roll ink on another sheet of metal, glass or plastic, insert it in the press, and squeeze down the block to transfer the ink to it.

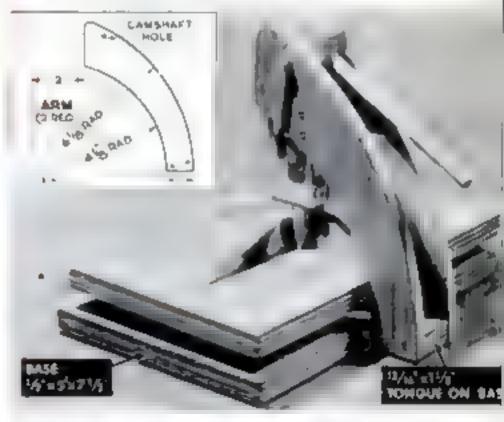

DIES CAN BE MADE by casting solder in a carved mold like this. It may be advisable to cut a shallow recess in the lower plate so that the tin-plate base of the die may be set in. Buttons and jewelry may be used as dies.

CAM ACTION forces the platen post down as the handle is swung to the horizontal. Spot the pivot hole about %" from the outside of the front guide strip and at a height to force the cam down on the post even when the platen rests on the base. Shaft is a 6-32 bolt.

FASTEN POST TO PLATEN with glue and a single wood screw. Then glue on braces as shown. The notch embraces the sidepieces, which are glued and screwed to a tongue at the rear of the base as in the photo below. At the top, the curved arms are bridged by the post guides. Metal clips at the bottom of these help retain the post. Two springs pull the platen up.

Here's How to Make Picture Frames Without Joints

Pennies pay for these good looking plywood photo mounts, and there isn't a joint in a carload. They are just solid pieces of plywood with beveled edges.

Saw so that the front face of the mount is %" larger all around than the print, Round off sharper corners with sandpaper and sand the bevels smooth. Apply clear

lacquer or resin sealer all over.

When this is dry, sand lightly and apply undercoat. This can be wiped off the bevels to leave the plies visible for a decorative effect. A second coat that contrasts with the undercoat produces a two-toned finish when wiped off while tacky. Wipe only the bevels, leaving solid color in the print margin.-Mac L. Olds, Tacoma, Wash.

TO MOUNT PHOTO apply thin coat of rubber cement to front of "frame" and back of print. Let dry thoroughly. Center print carefully as you drop it into place, for it cannot be shifted once in contact. Rub hard with noft cloth. Turn a screw eye into back for hanging.

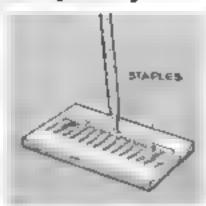

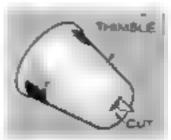

You Can Mix Plaster in a Ball

HALF of a hollow rubber ball makes a good container for mixing small amounts of patching plaster, for it is easily cleaned. Squeeze the ball and any plaster that has hardened too much for use will break away.-J. M. Finn, Pittstown, N. J.

Tamper Assembled Quickly

A HANDY tamper for cement or lawn work can be put together m a jiffy by stapling a garden rake to a block of wood. - Roland E. McCune, Harvard, Mass.

Thimble Cutter

THIS thread cutter, made from a dime-store thimble. enables my wife to rip out stitches fast. Cut a small

triangle in the end of the thimble, bend it out and file the edges sharp.-William B. Eagan, Louisville, Ky

SOON you may find yourself out on the road face to face with a punctured tubeless tire. They will be standard equipment on many 1955 cars.

A tubeless tire isn't necessarily punctureproof. Some makes have no special inner layer of sealing compound to "heal over" small punctures. And even those makes that do have an inner sealer can be punctured in such a way that they may develop a leak.

The tire makers have brought out two kinds of repair kits: professional kits, containing materials for various repairs, and smaller kits designed for motorists and intended only for fixing small punctures. The latter sell for less than three bucks.

Although the kits vary as to contents, and the step-by-step instructions that are included differ slightly, the basic procedures are similar.

Small punctures, like those you get from a small nail (no bigger than 1/16inch diameter), usually can be repaired without removing the wheel or the tire. A special tire-sealer gun that looks like

How to Patch Tubeless Tires

Kits make it easy. They include a gun that you can also use to repair small punctures in regular tires.

a screw-type grease gun is used to force a tire-sealing compound into the puncture hole. All kits contain one of these guns.

You jack up the car until the wheel can spin. Then you locate the leak by turning the wheel and watching for bubbles while water flows over the tire. Mark the puncture and wipe the tire dry.

Reduce the tire pressure to five pounds. Remove whatever caused the puncture and clean out the hole, taking care not to enlarge it. Then, following instructions provided with your gun, turn the screw handle to force the tire-sealing compound into the puncture hole.

After about 20 minutes you can re-

Small punctures can be fixed by using a tire-scaler gun to force scaling compound into hole.

LARGE PROFESSIONAL KIT for the repair of tubeless tires contains a large tire-sealer gun, two cartridges of sealing compound for the gun, scalant patches, rubber solvent, rat-tail file, plug-threading needle, six rubber repair plugs and a knife. Kits of this type, intended primarily for commercial tire repairmen but available to any motorist, cost less than \$10.

inflate the tire to the standard pressure, lower the jack and drive off.

The tire-sealer gun also can be used in the same way, one manufacturer claims, to repair small punctures in conventional tires with tubes right on the road, without removing the tire or the wheel. The tire-sealing compound does its job on both tire and tube.

Medium-size punctures (no larger than 3/16 or K inch) can be repaired with tire-sealing plugs that are provided in the professional kits. Since this work is

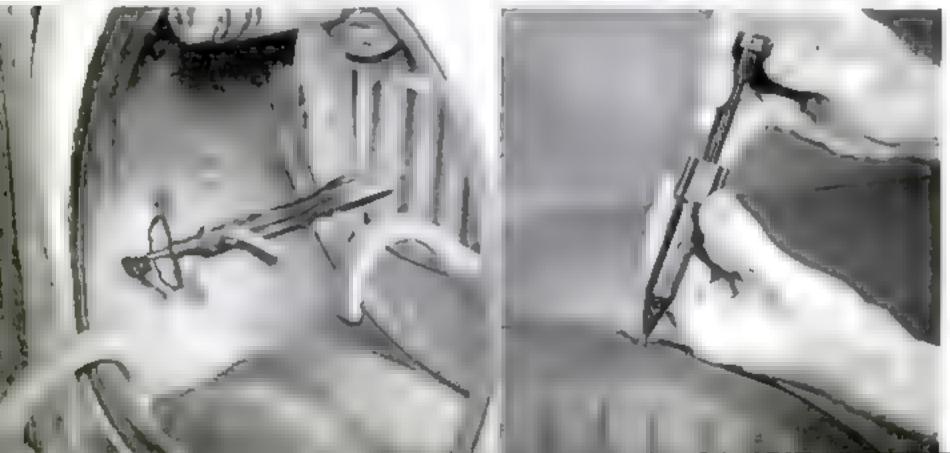

HOT-PATCH REPAIR requires the use of a special hot-patch clamp designed for use with tubeless tires. The clamp's jaws are elongated to fit around the sidewall of the tire.

done from the inside, the tire must be removed from the wheel.

Cold-patch repair. An ordinary cold patch also can be used to repair a puncture in a tubeless tire that doesn't have the inner layer of sealing compound, or in an unprotected area of a self-sealing tire. After the tire is removed, the puncture hole is cleaned, then filled with sealing compound from the tire-sealer gun. The cold patch then is applied to the inner wall in the regular way.

A hot-patch repair can be used on

TIRE-STALER GUNS FOR MOTOMSTS are smaller versions of the large professional guns. This one, made of plastic, comes filled with sealing compound and sells for less than \$1.50.

HOW TO USE A RUBBER REPAIR PLUG. First, plug-threading needle is inserted in puncture from inside (1). After stem of plug is attached to needle by squeezing metal fingers together,

plug is coated with solvent (2). Then needle and stem are pulled through from outside (3) until plug's head is tight against tire's inner wall (4). Finally, stem is trimmed flush.

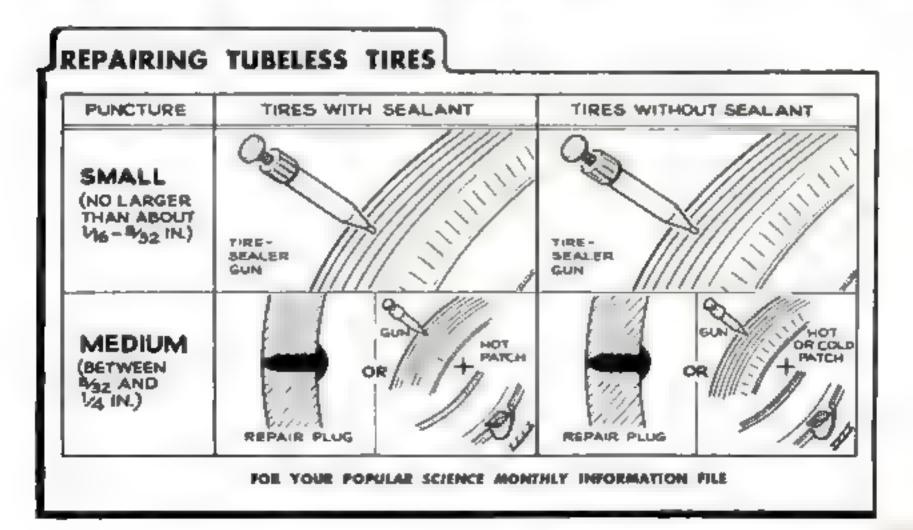

both types of tubeless tires—those with the inner layer of sealer and those without it. The tire-sealer gun is first used to fill the puncture hole and then the conventional hot patch is applied. But a special hot-patch clamp designed for use with tubeless tires is required to hold the patch in place.

Warning: Any puncture that doesn't "heal itself" in a tire having an inner self-scaling layer may indicate internal injuries that should be repaired. This can be done by carefully cutting away

the injured portion and applying a patch of special scaler material.

Leaks can also be caused by loose rim rivets. They should be tightened by peening over their heads with a hammer. If this doesn't cure the leak, each rivet should be coated with rim-rivet cement.

Some tubeless tires are fitted with a safety diaphragm. This does not quite fill the tire. After repairing a puncture, inspect this diaphragm. If it shows any kind of a cut or bruise, it should be replaced by a new one,

Magazine Patches Tire Boot

CAUGHT with a bad hole in one of our tires and no spare to switch to, we saved the day with this trick. To keep the tire from blowing the tube, we removed the casing and stuffed a folded magazine between tire and tube. When we got to the nearest service station, the tire was gone, but the tube and about 10 pages of the magazine were still intact.—Stanley Clark, E. Bradenton, Fla.

Wire Helps Chuck Small Dritt

The chuck of the usual carpenter's brace will not grip twist drills smaller than about K". A few turns of fine copper wire around the shank of the drill may provide enough bulk for the chuck to hold.—
Elbert Robberson, Port Washington, N.Y.

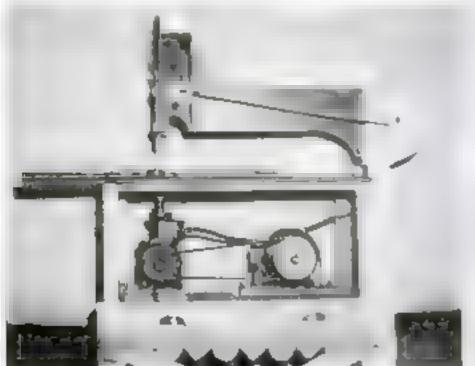

Wrench Becomes Bending Tool

An old monkey wrench makes a handy bender for strap iron up to 3/16" thick. Grind or file the insides of both jaws round and adjust the movable jaw to a close fit on the stock. To form scrolls, start at the inside and work your way around, bending a very little at a time.—Floyd McGuckin, Rudgewood, N. J.

Piston Head of Old Compressor Pumps His Scroll Saw

Gueero in a holder attached to the piston head of an old compressor, saw blades whip out fancy cuts in jig time or loseph Pera's homemade seroll saw. Pera who lives in East Paterson. N. J., added a neat touch by coupling a sawdust blower to the compressor's output valve

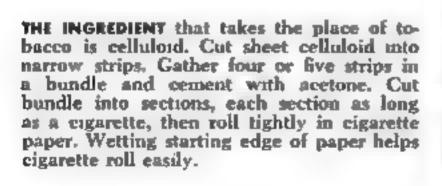

IF YOU'RE looking for a new stunt to amaze your friends, you'll find these novel cigarettes just the thing, light them once and they'll continue puffing smoke rings by themselves,

They can be used in many startling ways. Punch a hole in the mouth of a portrait photograph, insert one of the cigarettes, light it, and watch your friends' eyes pop in astonishment as the photograph apparently blows smoke rings from

the eigarette.

On holidays or special celebrations the cigarettes can be combined with other novelties. For example, at Christmas you might insert them in the mouths of miniature plastic snowmen and use them for table decorations. Once you start, you'll find there's no limit to the number of applications.-Ken Murray, Colon, Mich.

MINIATURE CIGARETTE in miniature holder will puff rings down to the end. Soft, unglazed cigarette papers burn best. The finished cigarette should have a diameter approximately the size of a toothpick. A narrow band of colored paper at one end simulates a cork tip.

Two Beds for the Price of One

By John Rogers

Just because you spend a third of your life in bed doesn't mean that it should cost you a fortune to do it comfortably. I saved at least half the price of a pair of modern twin beds by building my own frames to support store-bought springs and mattresses. So I figure I got two beds for what one would have cost. And I got an extra dividend: I can knock them apart for easy moving or storing by loosening six bolts and a few screws.

The entire frames are made from inexpensive two-by-four pine. Dimensions shown are for standard twin-bed box springs, but be sure to measure your own first, as sizes do vary slightly. The front corners are rounded for a pleasing appearance and to prevent whacking your shins against sharp points.

The one small luxury is his pine-veneered plywood for the headboards, but it's well worth it since these are the main parts that show. You can cut both panels out of a 3'-by-6' sheet (this less-expensive size is now available), with plenty left over for the gasset braces.

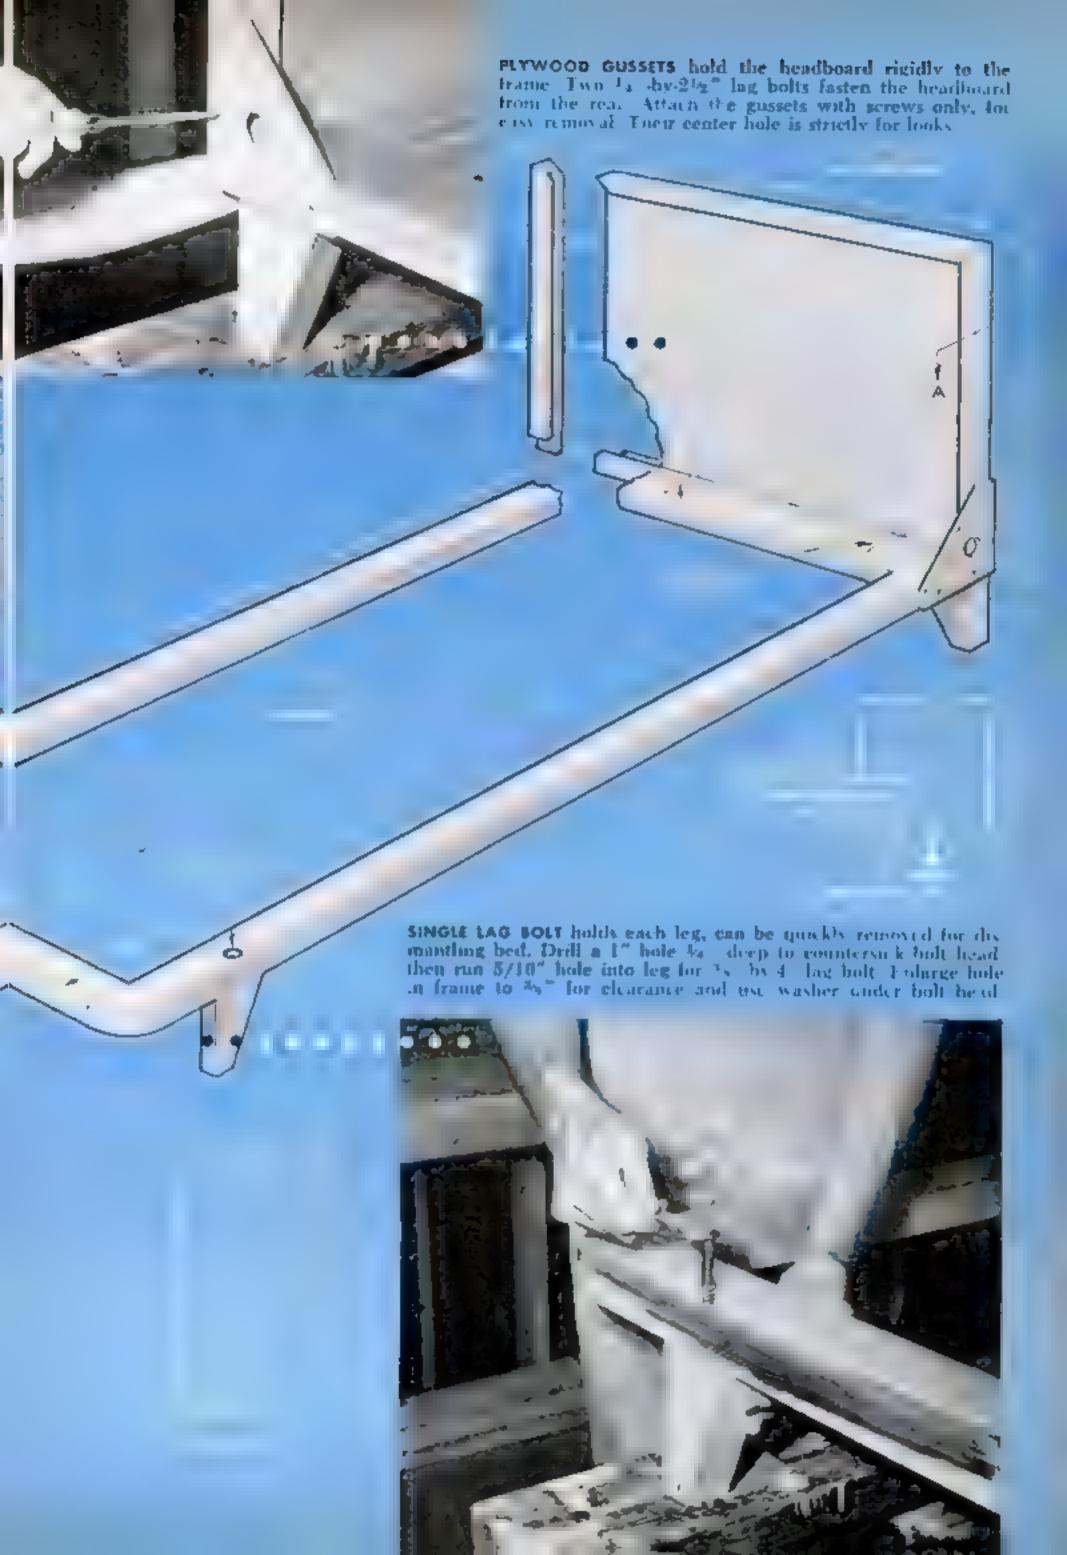

The plywood matches the rest of the bed and is framed with grooved 1%"-by-1%" pine strips that give it the rich, solid look of much heavier wood. Attach the strips with glue, brushed lightly into the grooves so it won't ooze out over the veneer, and clamp or tie until dry. The upper corners are mitered for appearance and the lower ones lap-jointed for strength.

I gave my beds a handsome natural finish by simply sanding and applying clear lacquer.

Two-by-fours and plywood make sturdy, inexpensive bedframes that you can even take apart.

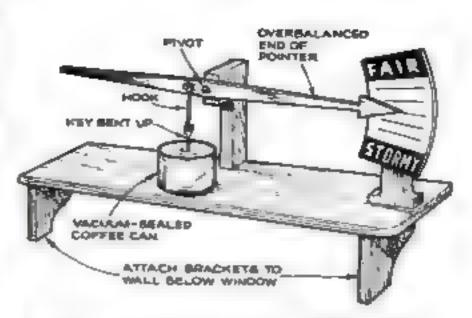

Beverage Cans Serve as Markers

REFLECTIVE markers for a driveway or nirstrip can be easily made by wrapping reflective tape around beverage cans mounted on wood stakes about 30" high.—Boh Blatt, Larchmont, N. Y.

Shellac Retards Rust on Bolts

When temporary bolts are being installed where rusting may occur, such as in scaffolding or form work, dip the threads in shellac before turning up the nuts. The shellac will retard the formation of rust, making subsequent nut removal easy Gilbert C. Close, Hawthorne, Calif

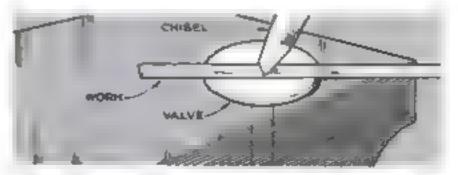

Coffee Can Forecasts Weather

If the price of java goes much higher I may lose my barometer, because its main part is an unopened coffee can. The vacuum seal makes the head of the can respond to any change in atmospheric pressure. This diaphragm action is carried to a long pointer by a hook passing through the key—which I carefully bent vertical—attached to the lid. The nearly balanced pointer (its arrowhead end is slightly heavier) gives readings on a calibrated sign. Low atmospheric pressure makes the arrow dip; high pressure raises it to Fair.—Walter Archer, Billings, Mont.

Brush Catches Grinder Dust

A wer brush placed under your grinding wheel will collect most of the flying abrasive gnt, preventing it from getting into tool bearings and damaging them. The brush oan be easily cleaned when dry by tapping it briskly into a waste pail.

Auto Valve Saves Vise Anvil

You can keep the face of a vise anvil from being nicked by inserting an auto-engine valve in the hardy hole.

The hard, flat valve head makes a tough back-up surface for cutting through metal with a cold chisel.—Howard E. Moody, Upper Jay, N. Y.

After I close a circuit running to the garage, my engine warms up as I eat breakfast. She's rarin' to go when I take off for work.

By Julian M. Sienkiewicz

It's a familiar dilemma: warming up the engine on a cold morning takes time when time is short; but starting out with a warm engine and heater is much better for the engine, and a whale of a lot more comfortable.

All done by buttons. My remote-control rig lets me start the engine from the kitchen. The car warms up while I have breakfast. When I go out to the garage, she's ready to roll. Two protective devices prevent mischances. An automatic warning light on the dash tells me not to drive off with the remote-control wires

plugged in. And a "lurch" switch immediately kills the engine if, accidentally, the car has been left in gear.

The idea can be applied to any car having an automatic choke. In no way will it interfere with normal operation. The circuit shown is suited to a manual-transmission car with push-button starting, but minor changes will suit it to others.

In the house. The remote-control unit is very simple: a toggle switch to turn on the ignition, a normally open push button to work the starter relay, and a pilot light to signal that the engine is running. These are mounted in a ply-

wood box, and their six wires run in weatherproof cable out to the garage. For a quick disconnect at the car, I use a multiple connector, concealed under the gas-filler lid.

The circuitry is simpler than you might think. The ignition toggle is wired as a shunt to the car's ignition switch, and the starter button as a shunt to the car's starter button. So when in the kitchen you flip on the ignition and press the starter, the car behaves exactly as though you were out there doing it in person. The "engine on" lamp is connected to the generator and ground, so that the instant the engine catches, the bulb lights up to tell you. If the engine should stall, the light will report that, too.

No lurching allowed. The lurch switch and relay may not actually be

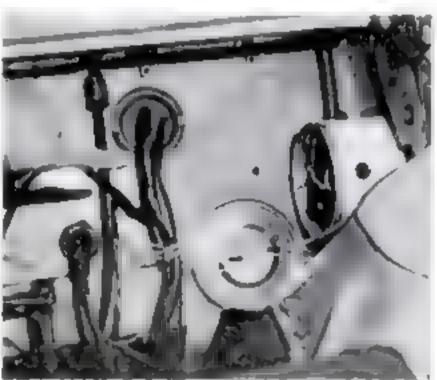

necessary, but are an investment in peace of mind. If the car *should* be left in gear, it will not travel six inches before both the starting and ignition circuits are cut off. I tried it.

A key chain, with a ball of solder at the end, is suspended inside a small, upright tin can. If the car lurches forward or backward, the ball touches the can wall, energizing a protective holding relay. This cuts the ignition and starting circuits and holds them open until the connector is pulled off

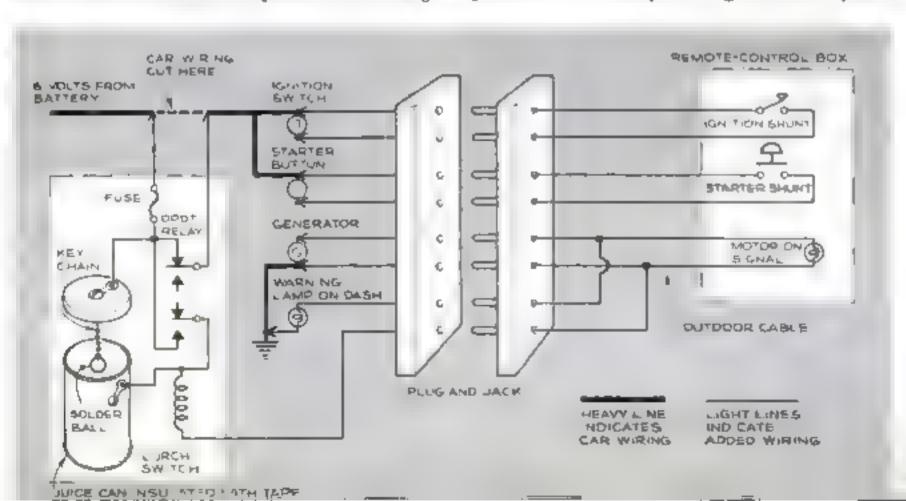

You'll notice there's a by-product advantage, too: If I should ignore the dashboard warning lamp and try to drive off with the connector still on, the lurch switch would stop me in inches. In the evening, I plug in and check to see that the kitchen ignition switch is off.

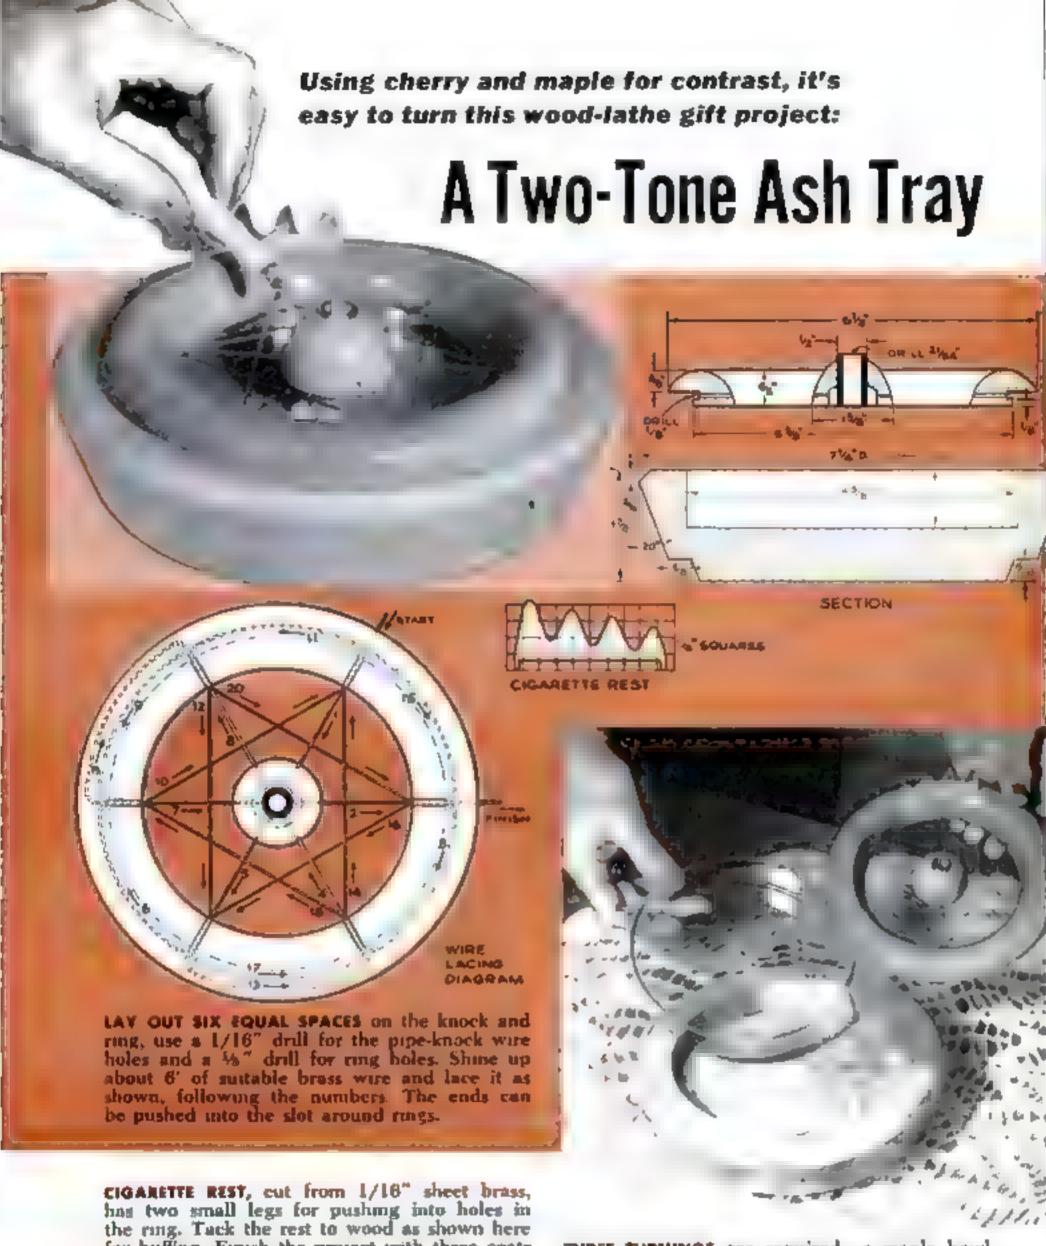

ONLY SECONDS are needed to plug in the connection at night or unplug it in morning. In the morning, the ignition key is turned on before disconnection in order to keep the motor running.

turch switch and relay, which make sure the car cannot take off on its own, are housed unside a coffee can mounted in the engine compartment. A 10-amp, fuse guards the system,

for buffing. Finish the project with three coats of brushing lacquer and rub well with fine steel wool between each coat.

THREE TURNINGS are required—a maple bowl and pipe knock and a cherry (or wainut) ring. Bowl is turned to suit a standard petri dish 20 mm. deep and 150 mm, in diameter. These are available from laboratory-supply houses. A glass ash tray of similar rize could be substituted and the bowl dimensions adjusted to suit. Drill the pipe knock 1/2" for the push-fit brass bushing that serves as a snuffer. Counterbore knock to make wiring easier.

Snow Shoveling Is Easier Now

A stroll behind one of the new home-size rotary plows quickly clears your sidewalk. Here's what you can expect them to do.

By Stanley Beitler

SNAZZY, power snow movers that literally blow snow away are replacing the old wooden-handled snow shovel. Their rotors churn up the snow and throw it aside at an average clip of 100 cu. ft. per minute. That's a lot of shovelfuls,

This wintertime counterpart of the

power mower has come into its own at about the same cost. It whirs through all kinds of snow on gravel, cement. crushed rock or blacktop. A swivel chute directs the snow where you want it.

You have to push some of the new snow-removal machines. The power unit just drives the rotor. Others are selfpropelled. Power usually is supplied by a one-cylinder gasoline engine, although

there is at least one electric unit on the market. Prices range from less than \$100 to around \$225. Most units cut a swath from 16" to 20" wide, 18" deep, and throw normal snow from 15 to 30 feet.

Some manufacturers offer snow-moving units that can be attached to small garden tractors. You can also buy accessories such as a rotary brush, snowdozer blade, drift cutter, and sulky,

Powered plows have two basic ways of getting rid of snow. In one, found

It Beats Shoveling!

Storage Cabinet Sorts Parts

Like most home craftsmen, I stock too many kinds of screws, bolts, nuts and washers for specialized storage. To get at the ones I want quickly I built a special sorting tray. I store nearly alike parts in one of two dozen glass jars, which are threaded into metal tops attached to the underside of the shelves in a cabinet.

Removing a jar, I dump its contents into the sloping tray, which hinges down from the front of the cabinet. After collecting the needed parts, I brush the rest of the assortment forward between converging strips of molding to a hole at the front of the tray. There they tumble into another glass jar, attached to a ring-type jar top. I put this jar back in the cabinet and attach the newly emptied one to the tray.—Carlton A. Burmeister, Toledo, Ohio.

How to Cut Replacement Glass

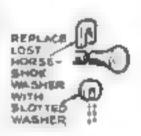

If A piece of glass used as a pattern to cut a duplicate or replacement slips on the work, a poor fit or a spoiled piece may result. Four pieces of common friction tape placed between the two sheets, near the corners, will keep the glass from slipping.—Harvey Muller, Danboro, Pa.

Idle Hands Can Be Put to Work

IF THE alarm hand on a spring wind clock is too tight to turn or too loose to stay put, you can still wake up on time.

Three types of tension adjustments are commonly used.
One (top right), has a threaded collar; screw in to tighten, out to loosen. The second type (center) has a spring leaf.
Curve it for more tension, flatten it for less. The third (bottom) is a horseshoe washer that frequently gets broken or lost. Make a new one by slotting one side of an ordinary washer.—W. Schopp, Philadelphia,

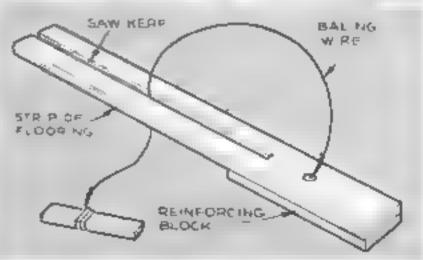

Wire In Slot Cuts Insulation

A FAST cutter for pads of insulation, devised by Bob Kenney of Townsend, Mont., is shown below. It's nothing more than a piece of baling wire and a length of flooring with a slot cut in it.

For use, the board is placed over the insulation and the wire under it. The ends are held with the feet. Pulling the baling wire makes a quick, clean cut.—E. V. Reyner, Townsend, Mont.

A FOLDING SCREEN will hide a workbench in a basement playroom. Use 2'-by-6' plywood panels on rectangular frames. Decorate with travel posters coated with shellae.

A COAT HOOK screwed beneath an overhead cabinet keeps a portable mixer handy. Raise the bowl, and the beaters will even stir a light mix unattended.

WHEN ADDING A CELLAR CEIL-ING, he sure to plug up any openings around pipes with a fireproof fill. Crushed concrete, brick, plaster or gypsum block held up by metal mesh nailed to the wood will seal off fire.

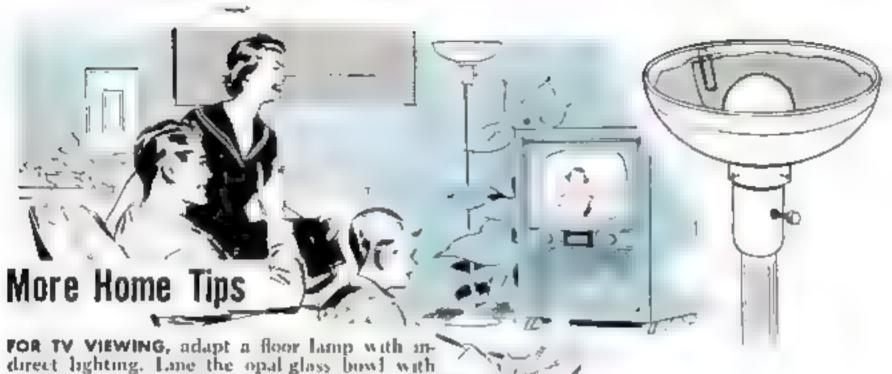

DRAWER DIVIDERS to keep your kitchen tools sorted can be neatly installed if the drawer bottom is removed and dadoes are cut in the sides to take partitioning. Fasten dividers at rear and sides with nails.

A SWINGING DOOR won't be marred by scuffs if a rubber stair pad is tacked on at foot level.

can be kept handy at your outdoor memerator. Just nail the lid of a small jar to the underside of a nearby fence rail.

Filters in Warm-Air Heating Ducts Help Keep House Clean

Dest from our forced-hot air furnace was a real nuisance—even though I kept the big glass-wool filter clean until I added this extra filter to each room register. Since fastening the filter to the register grille would interfere with the damper, I mounted it flat across the duct.

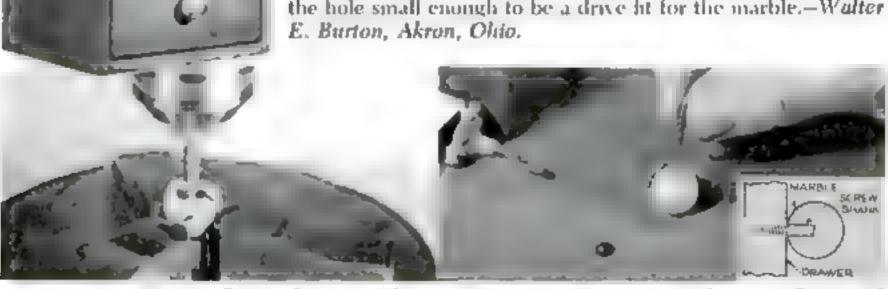

The bent-wire frame, made from two pieces of coat hanger, is covered with two layers of fine cheesecloth the kind sold to polish cars. Two prongs in front are bent to form eyes and screwed to the wood frame around the register opening.—John G. Voelker, Towson, Md.

Drilled Marble Makes Neat Drawer Pull

A COLORED "aggie" or glass marble makes a novel but quite practical drawer pull for modern as well as colonial furnishings. It can be used on small employerd or shelf doors, too.

Converting the marble to a knob calls for drilling a hole 3" to 3" deep in it. To hold the marble for drilling, wrap adhesive tape around it and clamp it in a vise or in a lathe chuck laid flat on the drill-press table. Avoid excessive clamping pressure by placing a bolt under it to resist drilling thrust, as shown in the photo.

Another way is to bore a hole in a block of wood, making the hole small enough to be a drive fit for the marble.—Wulter

TO DRILL THE MARSLE, flatten the top with a stone or fine file wet with turpentine. Then build a dam of modeling clay around the spot. Put in No. 150 silicon-carbide grains and a few drops of turpentine. The drill is ½ brass rod or tubing. Use medium speed, lifting the rod often to let the abrosive mixture flow beneath.

AFTER DRILLING THE HOLE, clean out all grit and turpentine with acetone, alcohol or other evaporative solvent. Cut the head off a wood screw whose shank fits the hole snugly. Roughen the shank by filing to give the cement a better grip. Turn the screw into the drawer front and cement on the marble.

A twisted strip forms the socket of this smartly simple candicholder. From clear 3/16" stock, rip a %"-wide strip 24" long (for a short socket, 15" is sufficient). Sand the edges smooth, and round both ends Heat in an oven until soft

With gloved hands, hold one end firmly on a piece of X" dowel. Quickly wind two to five close turns. Give the last 4" a quarter twist, and form the handle loop. Hold until cool

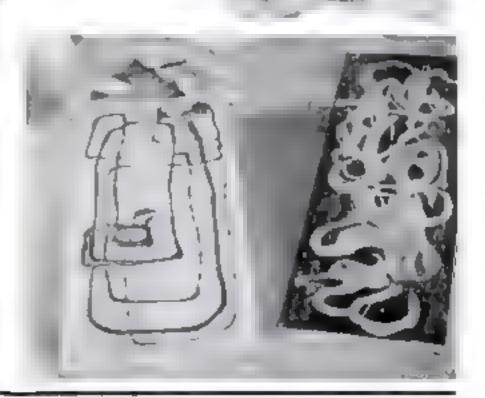

Holding the shaped spiral upright, rub the bottom and handle on sandpaper to form flat cementing areas. Bevel and polish the edges of a 4" square of %" or 3/16" black or colored sheet plastic, and cement the socket securely to it.

Poured-on patterns create st skind past plates or switch plates, the design be and part of the surface (car of colors Plex) 2 8 may be used

for the country very med attack chloride solvent and pearl, gold, silver or bronze powder (available at art-supply stores). Cut the plastic to size and sand or buff the edges, as preferred. Then remove the masking paper and sand one face to create a textured surface

Add bronzing powder to ethylene dichlonde. Then dissolve in it one third its weight of Plexiglas sawdust or chips. Pour a trickle of the mixture onto the sanded surface keeping well inside the edges. Leave in a dust-free spot to harden

BELT SANDING produces frosted effect on right side of this gainel, hand sanding strandlike lines nn left side Pattern at left below is made by pouring from a paper cup with a corner supped off, For swirl design at right below, flow contings of two colors on thickly filt panel to blend them into random patterns

THIS DOWEL JIG enables you to shape a square of plastic into a decorative dish in less than a minute. If embossed stock is used, shape with textured surface down, leaving inside smooth. Set oven temperature at 275° for type 1-A, 325 for type II (heat-resistant) Prexiglas.

From oven to dish in 30 seconds is the record for this table piece. To make the bending jig, draw a 9%" square on a piece of wood, mark 1%" both ways from each corner, drill %" holes, and drive in short pieces of %" dowel.

Sand the edges of a 12"-square sheet of %" or 3/16" sheet Plexiglas smooth. Remove the masking paper and hang the sheet from

MODERN SHAKER

Like fine crystal, this goes well with any modern table service. You'll need a 14"-square block of plustic 22" long for the body, and a bit of 3/16" sheet for the base.

Polish all surfaces of the block by sanding and buffing. Mark the center on one end by drawing diagonals. Bore a 15/16" hole lengthwise, stopping it 3/16" from the other end. Use a homemade flat drill as shown, or a similar flat wood bit (not an auger bit). Be sure to keep the hole parallel to the sides. Sand the inside to a silvery finish with abra-

an oven grate with clips or clothespins. Heat until limp. Then, wearing cotton gloves to protect your hands, place it squarely on the dowels and pinch each corner down between two of them. Gently press the center of the sheet down flat. If the corners are not neat, reheat the sheet and try again.

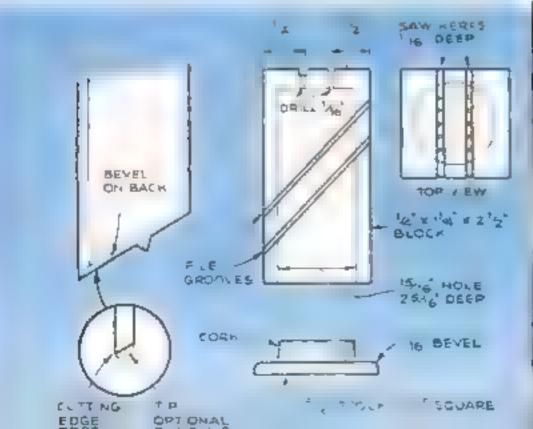

Leave the finished dish in the bending ing until it has cooled.

Sive paper wrapped around a dowel end.

Cut two kerfs in the top and drill 1/16"
holes through to the salt cavity. Make the
decorative diagonals with a triangular file.

From a big cork, slice a disk that is a push fit in the hole. Push this lightly into place, apply household cement sparingly on its bottom and stick on the square base, immediately aligning it with the body. Let the cement dry thoroughly.

FINISHED SHAKER and the homemade flat drill used to bore the salt cavity are shown here. File cutting edges on a bit of flat steel as in the drawing. Rivet it into a slot in a piece of 1/2" rod. Blade need not be hardened.

How to Repair Electric Clocks

Are you a clock watcher with a stopped clock? It's easy to start it cooking with amps again.

By L. B. Hedge

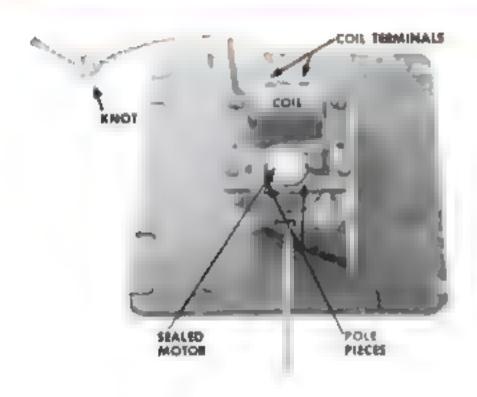

CATCHING an electric clock in a lie comes as a bit of a shock. But it may have warned you. Metallic whisperings, growling and grinding are all signals that a clock isn't happy and plans to quit one of these days.

If one of yours has, you can put it back in the running. If you have a clock that works complainingly, you can restore its good humor. All you need is a few hand tools (chiefly small phers and screwdrivers), a kitchen table to work on, and enough time to have some fun-

These juice-powered timepieces all have a small synchronous motor, which keeps step with the power-line frequency, and a gear train that drives hands or dials. Their troubles can be boiled down to three:

- 1. Dirty, gummed gear trains,
- 2. Defective wiring or coil.
- Bent or sprung frame, shafts or gears.

How to check for electrical troubles

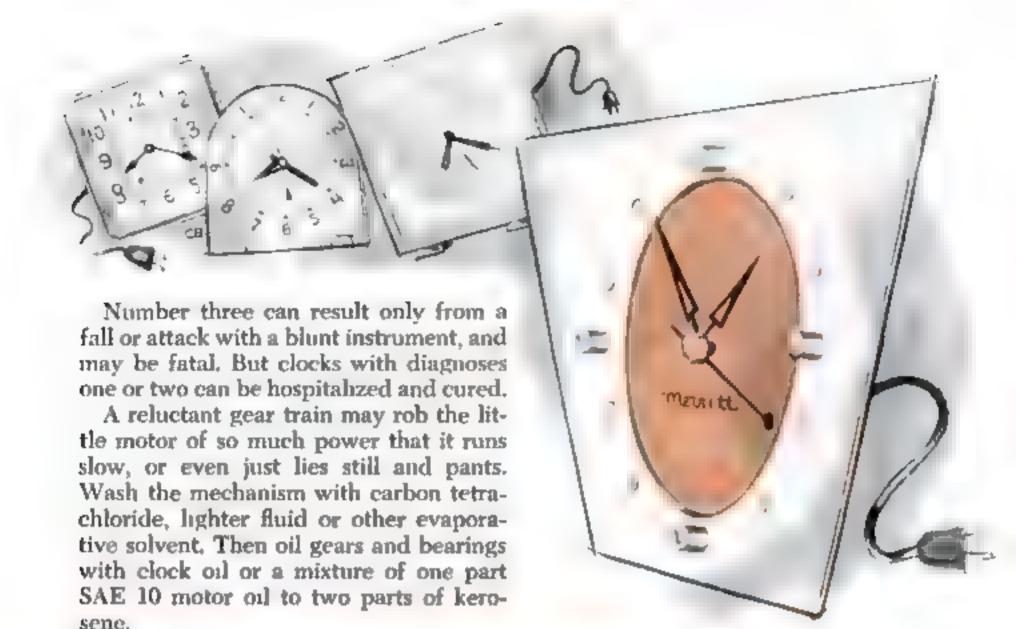

ALL clock motors have a coil of very fine insulated wire, the two ends of which are connected to the cord. You can tell whether the coil is working (even though the clock isn't) by the feel of the starter knob on some models. It spins freely if the coil is dead, drags its feet if the magnet is energized.

Self-starting units like the one above can be checked by holding a paper clip or other bit of steel on a pole piece with the current on (careful not to touch bare terminals!). If current is going through the coil, the metal will buzz vigorously, especially near the pole tips.

This test okays the coil, but a loose connection may make the clock run intermittently, or stop and start when its position is changed. Check connections at the plug first; then inspect connections inside the case; and finally feel along the cord for internal breaks.

These are hard to find, so replace a doubtful cord. Solder it to the coil lugs if the original leads were soldered. Pigtail splices can be soldered, made with small solderless connectors, or as a last resort tightly twisted. Be sure to tape splices. Don't forget the cord knot inside the case that keeps strain off the connections.

If with a new cord and tight connections the magnet produces no buzz, the coil is defective. Open coils like the one shown are easily replaced after taking out the two bolts that hold the center leg of the core to the pole pieces. New coils can be bought from the clock manufacturer. Identify the clock as fully as possible when ordering.

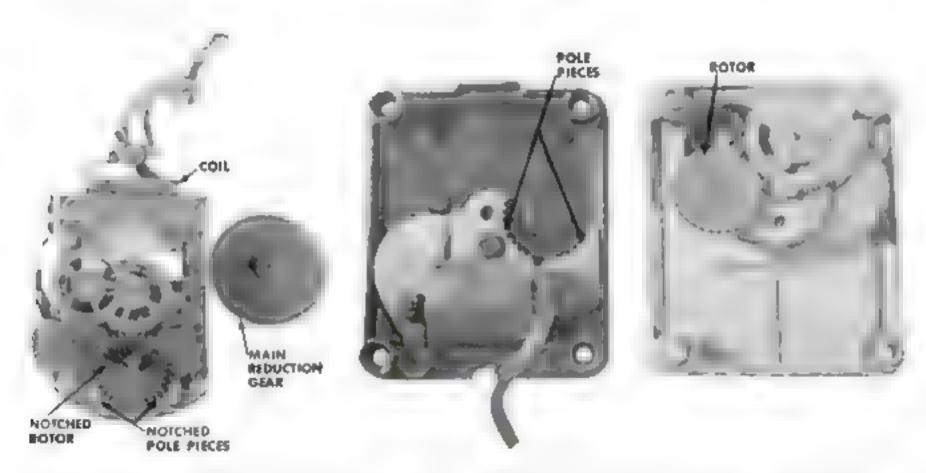

Clocks with starting buttons are simple

THE phonic-wheel motor has a toothed rotor turning between notched pole pieces. It must be started by hand, but it then keeps step with the alternating current, turning the space of one tooth at each current pulse.

If the coil and its connections are in-

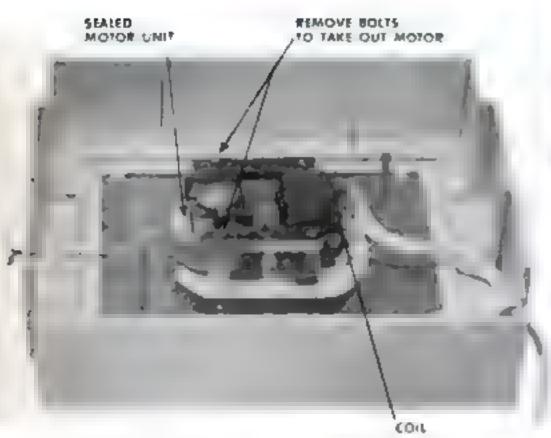

tact, and the gear train clean and undamaged, the clock should be in running order. But any slight resistance, such as may be caused by grit, will stop the motor, which cannot restart itself. Cleaning of the gear train and an electrical checkup are all such a clock should need.

PHONIC-WHEEL MOTORS are shown above. At the left is the Westelox mechanism, with the main reduction gear removed. The center and right photos show the two plates of the Hammond mechanism separated and laid side by side, the coil and field magnet being at the left.

Please turn the page for more tips on electric clocks NOVEMBER 1954 227

Servicing a two-pole sealed-motor unit

ALL the moving parts of the two-pole Telechron motor (also used in General Electric clocks) are enclosed in a sealed drumlike case, from which projects a small drive pinion. Noisy operation often forecasts failure of this unit.

Remove the two long screws indicated in the photo above. (Do not loosen the screws at the coil end.) Note how the spring fingers on the spacer sleeves bear on the motor unit, so that you can replace them the same way. With the

WHAT'S INSIDE the motor unit? (Don't open your own.) The two rings at right are driven by the split-phase magnetic field between the pole pieces. Power goes through the gear train to the small pinion at left of case.

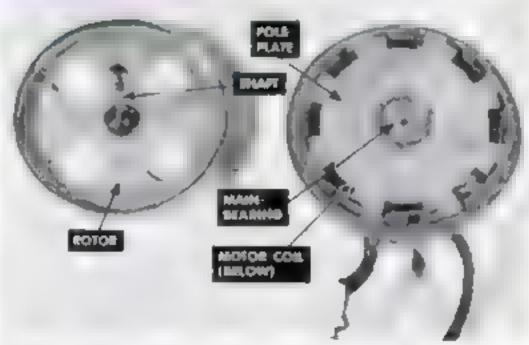

screws out, you can lift the motor assembly free and twist the sealed unit out from between the pole pieces.

Gumming up of the gear train inside the case results from leakage or evaporation of the original lubricant, and its

What to do about a multiple shaded-pole unit

USED in Sessions clocks and in various makes of timing devices, this unit has a drum-shaped motor welded to an elongated gear case. The gear train may be gummed up. Pry off the cover (or unsolder it if necessary) to wash out and oil the mechanism. Also see whether the main motor shaft spins freely—torque is small here and failure of lubrication may stall the works.

Should the shaft drag, pry the cover off the motor side and drive out the shaft as shown on the next page. Clean it by twisting it inside a folded strip of fine abrasive paper. Wipe it clean, run light oil into the motor bearing to soak the wick inside, and replace the shaft.

POWER UNIT of this timing motor has a ringshaped coil under the notched pole plate (above right). The moving member, or rotor, is a thin stamping with either four holes, like the one above, or narrow slots all around it.

PRICK-PUNCH A SPOT on the rim of the case, directly opposite the drive pinion (nowhere else!). Tap-drill for a small screw. Don't poke the drill in far. Turn the tap in only enough to form threads (center photo). Squirt in penetrating oil or cleaning solvent, shake hard,

shake the fluid out, and repeat. Then put in a few drops of penetrating oil or oil-kerosene mixture. Close the hole with a screw and a small leather washer. If you have no tap, make a smaller hole. Plug it with a piece cut from the thick part of a wooden toothpick.

contamination with particles worn off the moving parts. You can buy a new unit, but it is usually possible to salvage the old one. Follow the step-by-step picture captions.

Adding too much oil to the gear case

after flushing it out may make the clock run slow. Shake out the excess, or blow it out with a medicine dropper. Cleaning and oiling the unit every 12 to 18 months should keep this type of mechanism running indefinitely.

TO REMOVE MOTOR SHAFT, rest the case on blocks or vise jaws as shown here. Place a small nail or thin punch on the end of the shaft in the rotor and drive it out. Take care not to dent or bend the rotor itself

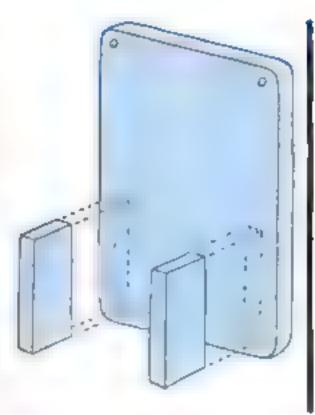

A SENT ROTOR may drag against the pole plate just enough to keep the unit from running. This is easy to spot, and a little judicious bending with a knife point, like this, will put the rotor back in working shape.

How to Give an Old Sink a Lift

Five dollars' worth of redwood ends dishpan stoop and gives you two handy storage shelves.

TROUBLED by an old kitchen sink that's a back-breaking 30 inches from the floor? You can give it a face lifting, and add two storage shelves and the modern look—all with five dollars' worth of 1" redwood, a few pipe fittings and odds and ends from your scrap box

Shape the legs first. They should be long enough to put the drainboard 36" above floor level. One leg will be bolted to the original leg bracket under the drainboard and the other to a bracket on the sink bottom

Next, cut the shelves, making them a few inches longer than the leg spacing Measure the leg cross sections at the two shelf heights and cut rectangular holes in the shelves to correspond. Slip the shelves in position and anchor them

with some short sections of angle iron.

Tailor the facing strips to fit flush with the drainboard and sink edges. Note that sloping end-cuts give the boards an inward tilt toward the bottom.

Now, uncouple the drain and faucet fittings, take out the bolts that attached the sink to the original metal legs, and lift the sink clear of its wall hangers. Raise the hangers to the desired height, and with nipples and elbows extend the hot- and cold-water pipes up and outward to realign with the holes in the sink back. Insert a drainpipe extension either above or below the trap

Bolt the leg-and-shelf assembly to the undersink brackets and slip the sink back on its wall hangers. Recouple the faucet and drain connections.

The sink-facing assembly is attached to the wall with L-shaped brackets and held up at the front by a redwood arm projecting from the leg under the drain-board. For further support, a piece of light drill rod is passed through the unused leg bracket under the sink and bent forward to a countersunk bolt connection with the front strip.

How to sound condition your basement workroom

Much of the enjayment and relaxation of working in your basement can be spailed by disturbing noise. Cut down the annoying effects of power tools, hammering, and sawing by sound conditioning your basement with a cailing of Armstrong's Cushiantone® or Perforated Temlok Tile. Besides absorbing noise, these tiles provide an attractive cailing finish you can install yourself

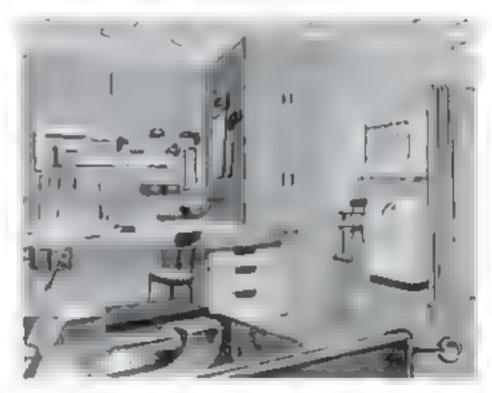

Economical wood fiber meterials. Both Cushiontone and Temlok Tile are low in cost, attractive in appearance. They are factory-finished, can be washed or repainted if desired. Cushiontone's noise-trapping holes are arranged in an attractive "Full Random" pattern, while Temlok's perforations are in neat straight rows.

2 Installation is easy. Start by nailing up 1" x 3" seasoned wood furring strips at right angles to the joists on 12" centers. Furring should be shimmed where necessary to provide a level surface for nailing or stapling. If existing ceiling is plaster, gypsum board, or any other smooth, firm surface, Cushiontone can be comented directly to it.

3. A professional-looking job is assured by the special Lok Bevel joint on Temlok Tile. Use four 1½" 3d box nails or four staples with ½" legs for each tile With Cushiontone, use flothead or collar nails in shallow-drilled corner holes. Naitheads should be ½" or \$\frac{1}{2}\colday" wide, spils at least ½" longer than thickness of Cushiontone.

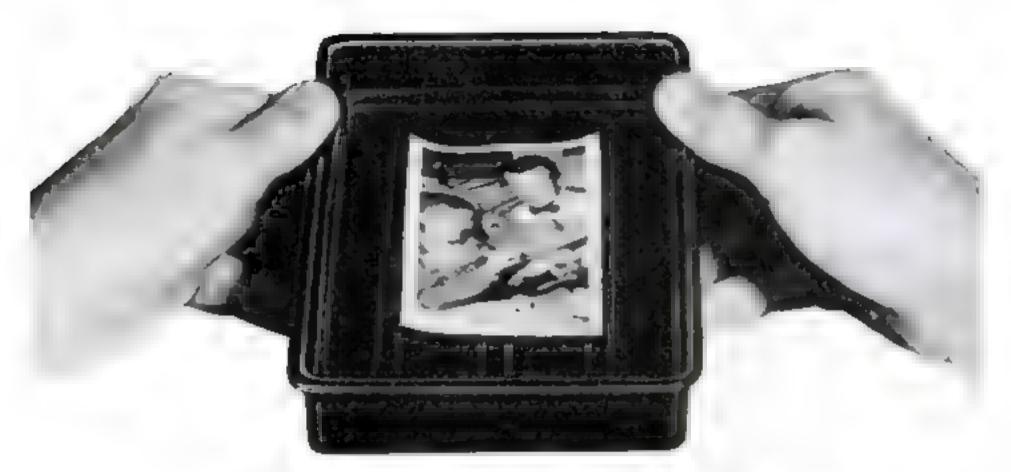

4. Job's done in a few hours. You'll have a goodlooking, practical ceiling that will solve your basement noise problem permanently. In fact, your family will probably be so pleased with the newfound quiet, they'll want you to sound condition the kitchen, den, and TV room with Armstrong's Cushionione or Perforated Temlok Tile.

Your building materials dealer will be glad to give you full details on full Random Cushiontone, Perforated Temlok Tile, and Armstrong's other building materials. For a free booklet on Cushiontone and Temlok acoustical ceilings, write Armstrong Cark Company, 3911 Washington Avenue, Lancaster, Pennsylvania.

Million-dollar thrill for as little as \$525

—watching your first photo appear out of nowhere

Now it's so easy to print your own snapshots!
You can do it with the room lights on!

Watch a picture you've taken appear as if by magic on a blank sheet of paper in the developing tray. We wager you'll get the thrill of a lifetime!

It's all so easy with the Kodak Velite Paper that's included in Kodacraft Outfits. You can print a picture in daylight or under any type of electric light ordinarily used in your home.

The pictures below show how really simple it all is. As little as \$5.25 can start you off. Your best friend to see is your Kodak dealer.

Koducraft Photo
Developing and Printing Outfits

are designed for ease of use, contain all basic equipment. Kodacraft Printing Kit, \$5 25; Kodacraft Photo-Lab Outfit (illustrated), \$9.75; Kodacraft Advanced Photo-Lab, \$14.95.

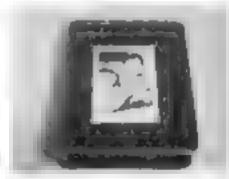

Expose 20 secs. Place negative and Velite Paper in printing frame and expose with 100-watt bulb in reflector of gooseneck desk lamp at 8 mehes.

Develop 60 sees. Remove Vehte Paper and place in developer. Rock tray gently Picture will appear in about 60 seconds. You'll scarcely believe your eyes.

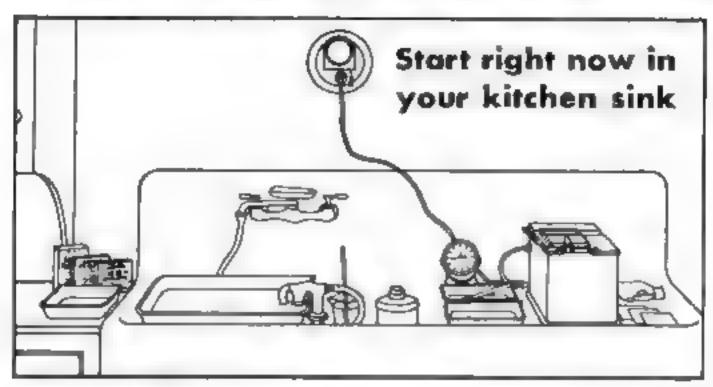

Use stop both 15 secs. Next drop into stop bath and agitate 15 secs. (Isn't this an easy way to make extra prints for friends—or personal photogreeting cards.)

Place in fixer. Take print from stop bath and place in fixing bath. Soak for 5-10 minutes. Wash in running water—then dry in blotter.

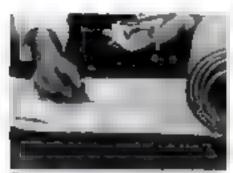

No elaborate equipment needed to become expert at this hobby

Once you've enjoyed the thrill of printing your own photos and gained some experience, you'll want to develop your own film—and eventually make big, dramatic enlargements.

The modestly priced Kodacraft Photo-Lab Outfits have everything you need to start off. Later on, as you advance, you'll want to add such pieces of Kodak equipment as are shown below. Equipment arrangement should allow a smooth flow of work from printing frame through developer, stop bath, fixing, and washing with everything compactly grouped so operations can be performed with a minimum of steps. If there's no lamp socket over the sink, safelight can be placed on extension cord.

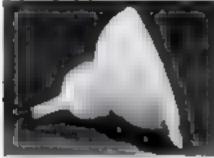

Your Kodak dealer can give you valuable help on this project. Among the literature available is the booklet, "Developing, Printing and Enlarging," which you'll find extremely useful. Why not see him before the weekend?

Time-saving print dryer. Kodak Photo Blotter Roll prevents prints from curling, \$2.88

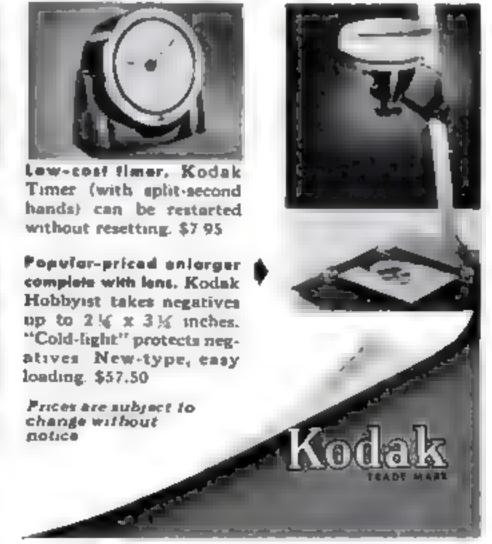

Automotic print-woshing. Kodak Automatic Tray Siphon attaches to water faucet. \$4 50

Hondy combination funnel. Kodak Combination Funnel provides 3 sizes of funnels. \$ 85

2-way safelemp. For enlarging, black-out kitchen window—use Kodak 2way Safelamp. \$4 50

Eastman Kodak Company Rochester 4, N. Y.

Graduated Grinding Rest. A dime-store protractor enables me to grind tool bits to specified angles, and to regrind them with a minimum of waste by resetting the rest to the same angle.

One piece of angle iron is mounted on my grinder parallel to the wheel shaft on a piece of flat stock. Another, notched

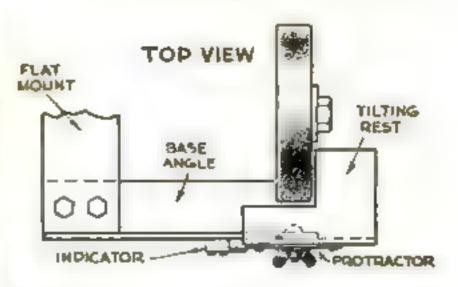

Centerdrill Without a Lathe. Shafts can be centerdrilled accurately in a drill press. For shafts from X" to X", you need a set of 5 machine bushings from X" to X" inside diameter and 1" long, with 1 16" walls, so that they will telescope.

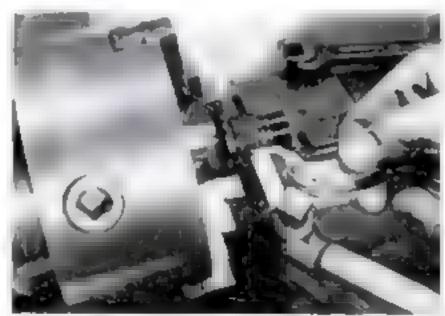

The photo shows a 3" shaft being centerdrilled 4". The 3" bushing is slipped on the shaft, the 3" bushing goes into it, and the 3" bushing, in the 3", guides the drill. If the hole is to be smaller than the bushing bore, start it with a drill that fits, and then change to the desired size.

Nontack Welding Surface. Copper makes a fine top for welding tables because the arc will not tack work to it, but it is expensive in big sheets. Many sheet-metal shops will sell cheaply scraps of sheet aluminum, which serves the same purpose. It burns through easily but, by moving work around, almost the entire area can be used before the sheet has to be replaced.

NEW Shop Ideas

around the wheel, pivots on a bolt near the upper corner of the stationary angle. The protractor is attached to this piece and an indicator to the other. Angle grinding is done on the side of the wheel. In the full-down position, the rest is automatically at 90° to the wheel side.—Warren W. Lacey, Queens Village, N. Y.

Gauge Chases Threads. Fine threads cut in the lathe may seem tight because of microscopic chips. A hardened-steel threading gauge can be used to clean and deburr such threads in bruss or other soft metal. Mount a square-ended bit in the tool post as a rest, and with the work turning slowly, apply the gauge as above.—John J. McGuckin, Ridgewood, N. J.

DON'T BE PUSHED AROUND THIS WINTER!

Your car will start fast with patented FIVE-RIB CHAMPION SPARK PLUGS!

Whatever the weather . . . just touch the starter and

your full-firing Champion Spark Plugs go to work!
Champion's exclusive FIVE-RIB insulator design protects you against electrical "flash-over" due to dampness—a major cause of hard starting.

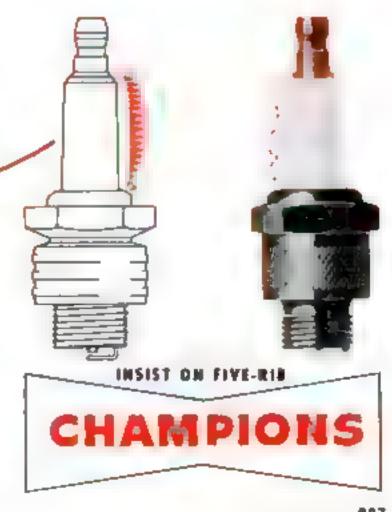

Compare a FIVE-RIB Champion with an ordinary spark plug and you'll see why.

Champion's insulating surface is greater because of its ribbed construction. Exterior electricity is diverted and spent before it can short out a damp plug. Tests prove this gives you as much as forty percent more protection than smooth insulator types under the same conditions

Get the jump on winter now. Let your Champion dealer install a set of FIVE-RIB Champions when your car has its winter change-over.

You'll get going, and get where you're going, with Champions!

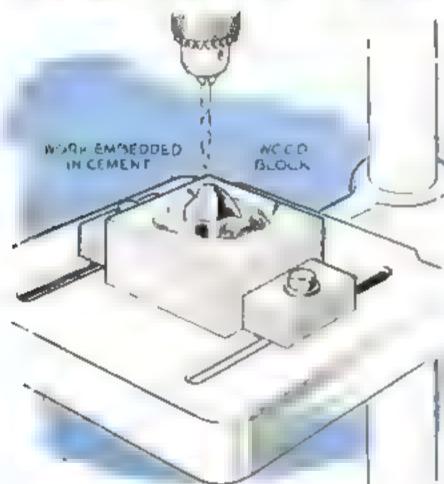

CHAMPION SPARK PLUG COMPANY, TOLEDO 1, ORIO

Fishline Stops Lathe. With a big repeat run on hand, some means of stopping a lathe at a predetermined spot was needed in a hurry. A length of fishline was tied to the half-nut lever as shown at left, looped back through a screw eye, and run along the lathe bench to another screw eve and the motor switch. The operator chucked each piece and started the lathe. As the carriage neared the end of the cut, the line supped the switch off

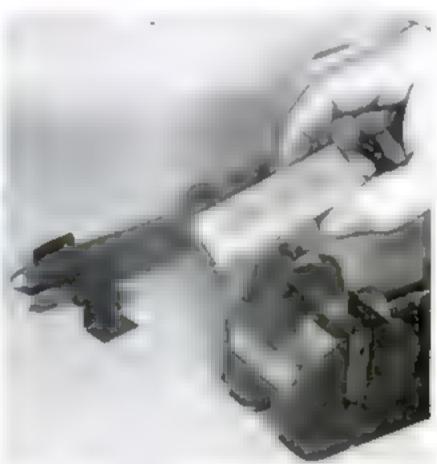

For reliable tripping each time, be sure to use nonstretching line or prestretch it before rigging such a stop.—Floyd Mc-Guckin, Rulgewood, N. I.

Cement as Drilling Fixture. Oddly shaped work can be hard to hold even in a drill-press vise. With a lot of identical pieces of this kind to drill, I gouged an oversize hole in a block of wood and filled it with common iron cement. One of the workpieces was lightly oiled and pressed into the soft cement in the desired drilling position.

When the cement was hard, the oiled piece was removed, leaving a cavity that held each piece in precise alignment for drilling.—R. H. Richter, Detroit

Cutting oil can be had for the takung in any kitchen. Bacon grease, poured
into a can to harden, can be applied with
a small brush just as it comes from the container. Heat generated by turning or threading promptly melts it on the work.

Brush as Soldering Aid. One of those brass-wire brushes sold for treating suede shoes makes quick work of cleaning metal prior to soldering. It's also handy for wiping the tip of the iron.—Gilbert C. Close, Hawthorne, Calif.

Do-It-Yourself . . . Do More . . . Do Better

with STANLEY TOOLS

Take this folding rule. Only the inches are like other rules. Even these last longer. The sticks are extra thick and plastic coating protects the markings against wear. 8 in. brass slide extends 6 inches either end, or may be removed to measure where rule won't fit. Rule opens to even numbers... folds to convenient marking gauge for even inches from 2 to 12. Ask for Stanley "100 PLUS" No. X226, \$2.75

Try this nail hammer. Stanley solves the problem of hitting 'em where you ain't . . . at least where you can't reach to hold and hit — over your head. The claw grips the nail, the slot seats the head . . . you reach over your head and start the nail. Then finish the job with the business end of the hammer. Ask for Stanley NAILMASTER No. 51½ . \$3.35.

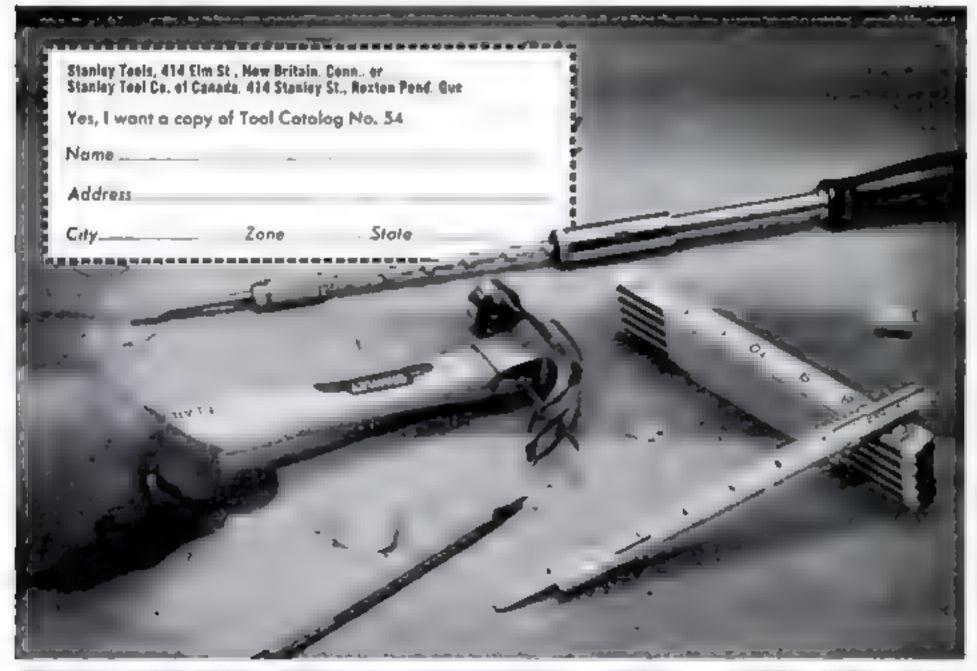

Inspect this screw driver. Here's a tool that deserves inspection . . . that'll stand it. This is a professional tool, used for years by craftsmen in industry, in the home shop. It does more than drive screws. With this "Yankee" you drive and draw one hand, thanks to ratchet action and quick-return handle. It's fast and easy. Ask for "Yankee" Spiral Ratchet Screw Driver No. 130A. \$7.70 (Includes three different size bits).

Look for Stanley and "Yankee" when you look for fine tools. Use coupon for free catalog.

tings for coarse, medium and fine sanding of plastics, metal or wood. Big 12" disc has 113 sq. in. of sanding surface. Disc feeds into work. Depth control dial and built-in ligs assure precise duplication of work without repeated measurements.

for large-diameter boring. Other Speed-Dial settings for downling, routing, skaping. Unlimited capacity for drilling in a horizontal plane. Rigid fence support with adjustable table height makes drilling for downling easy and accurate.

-New POWER MOUNT! Add jointer, [igsaw bandsew, etc., with twist of a handle, one turn of a setscrew. Complete range of Speed-Bial testings evallable for every POWER MOUNT operation

Don't throw them away; magnet wire can make them as good as new, and more useful than ever.

Easy Rewinding Job Salvages

NE look at the hair-fine wire on earphone bobbins may convince you that rewinding them would be a hairraising job. But it's actually easy to do if you use ordinary magnet wire. The result is a pair of low-impedance phones that match radio and TV output transformers, have good tone quality, and can be driven hard before they distort.

You can use such phones for testing, letting children listen when you want quiet, watching late TV shows after most of the family is asleep, or as underthe-pillow speakers for bedside radios.

Take the phones apart and remove the fine windings by cutting across them with a single-edge razor blade. Wind two layers of No. 28 cotton-enamel wire on each pole piece in the same direction and with the same number of turns Connect the starts of both windings and bring the other ends to the binding posts as in the drawing below. This will make current flow in opposite directions through the two bobbins.

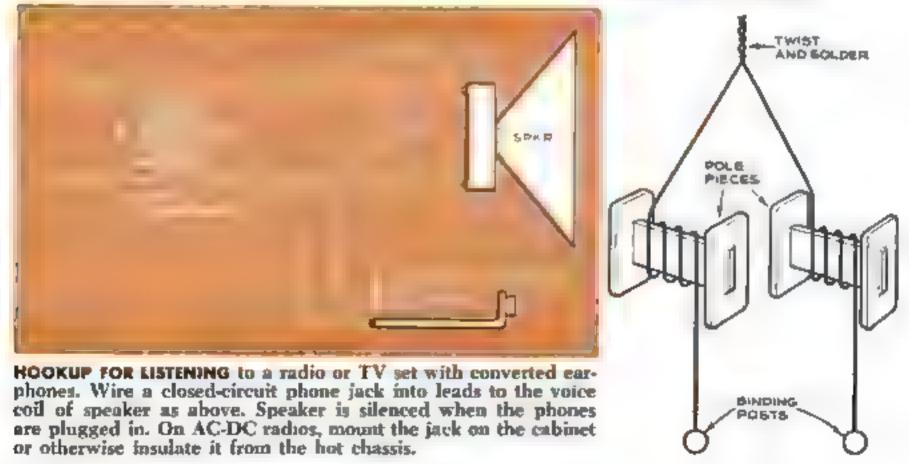

Connect the cord so that the two

phones of a headset are in phase, To cheek this, touch the tips to a 1%-volt flashlight cell and see whether both diaphragms move in the same direction. If not, reverse connections to one phone.-Arthur Trauffer, Council Bluffs, Iowa.

WITH BOSSINS REWOUND for low impedance (foreground), this earphone is ready for reassembly and years of service. Horseshoe magnets must be replaced with like poles touching. If in doubt, hang one by a thread and bring other near it. Poles that repel go together,

Emery Cleans Typing Eraser

A TYPING eraser won't smudge the paper if you clean it first on an emery board kept conveniently taped to the typewriter. Brush the eraser dirt off to the side so it can't fall into the machine.

Toggle Can Be Made Quickly

To MAKE a toggle, bolt quickly, cut a lengthwise slot on a short piece of light angle iron, just wide enough for a bolt Turn a nut %" on the bolt. Lav it against the inside of the angle iron. Insert the toggle in the wall and pull the bolt out toward you, then screw the bolt together. The angle fron will prevent the nut from turning. -C. H. Hardy, Los Angeles.

Rubber Holds Small Glue Jobs

Next time you have a gluing job that is too small or irregular to handle conveniently in a clamp, get a long piece of model-plane motor rubber and wind it around the assembly.

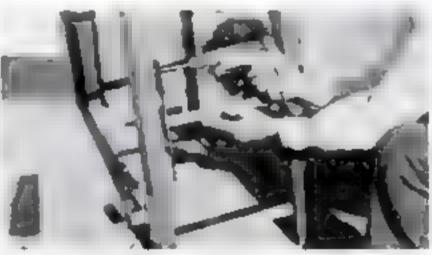

Start in the middle and work back and forth toward the ends, stretching the rubber as you wind. Tuck in the ends. Most glues and cements will not adhere appreciably to the rubber,—Roy L. Clough Jr., Bristol, N.H.

How I Made My Ladder Safer

By Andrew Vena

WHOOPS! JUST AIR as I drop my foot while descending the top section of my extension ladder which I frequently use by itself. I keep forgetting the maker omitted a rung at this point because of the locks. So . . .

IN GOES A RUNG, a piece of %" pipe welded to two 3/16"-by-1%"-by-12" steel bars in an H-shaped assembly. The lower ends of this are fastened by the lock-mounting bolts while the top ends are held by two extra carriage bolts. Washers space out bars so locks can work.

NOW, THAT'S MUCH BETTER! The new rung, rigid and safe, eliminates the possibility of a long, parting drop to the ground.

New (m) DeWalt "Power Shop" brings out the expert in you!

Today, AMF De Walt® "Power Shop" is everywhere known and accepted as the one really safe, accurate, easy-to-use machine. It's so designed that even the inexperienced can expertly do everything in home woodworking.

Whether you're modernizing, decorating or repairing your home, AMF De Walt is your best investment. See it demonstrated today. At your De Walt Dealer's or fine hardware and department stores.

All those exclusive extra-value advantages!

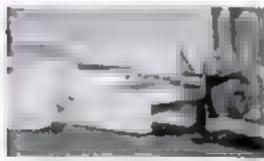

TOP-SIDE CUTTING! No guestwork —na mistakes. You always see the cut because layout marks are visible and easy to follow.

PROFESSIONAL ACCURACY! Cullbroted scales for miter, bevel and rip are visible above table. Instantoneous settings!

EASY TO USE! You control bullbearing travel head in radial arm. Moves smoothly, precisely. All cuts perfect—no spolinge.

COMPLETE VERSATILITY! One powerful direct-drive motor occommodates any circular tool-given full home workshop flexibility.

174 West

NO FLOOR SPACE NEEDED! Builds into your workbench! When not in use radial arm swings conveniently out of way, freeing work area.

HOME SAFETY FEATURES! "Stop" red controls, UL*-approved mater, safety key switch, auto-float safety quard (optional).

MORE Hints from the Model Garage

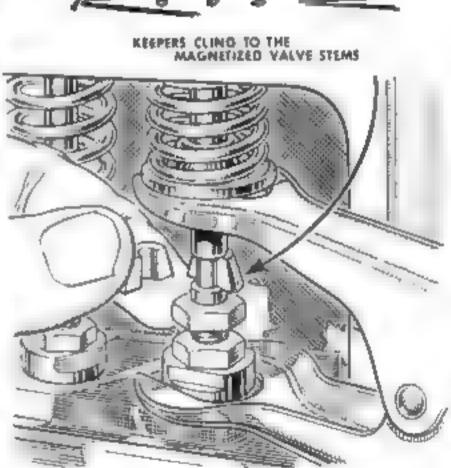

Metal tabe made from linoleum rug binding and riveted over the strap ends of emergency tire chains will eliminate fabric fraying and speed up the job of threading the straps through finger-freezing wheel slots and chain buckles.

No floundering to find the headlight-beam switch, when you hinge a replacement accelerator pedal over it. Rivet a plate with a hole in it to the bottom of the pedal, slip the hole over the switch button and mount the pedal on the hinge plate.

A lug wrench is always handy and the spare-tire retaining nut won't get lost if you braze the nut to a short piece of pipe and weld the pipe at right angles to the center of the wrench. Make sure the pipe will admit the retaining-rod end.

Magnetism can be used to hold the keepers in place during reassembly after a valve job. Stroke the ends of the valve stems with a powerful alnico magnet before dropping the valves back into the block. The small keepers will then leap to the stem.

Rockwell-built DELTA 24" Scroll Saw

Deba 74" Scroll Saw-standard of overity for industry, and for the firest home shops. (Also available in Hamecraft 16" model),

ONLY THE FINEST IS GOOD ENOUGH

The Delta 24" Scroll Sow is-beyond all doubtthe finest scroll (or jig) saw made—at any price. Proven through years of punishing mass production operation, it is the accepted standard in the woodworking and pattern making industries

What better recommendation for your home workshop-where superior, more professional projects demand real quality and soundness in the tools you use?

Only on a Delta Scroll Saw can you expect Delta Quality "extras." This versatile machine cuts stock up to 2" thick, yet also cuts the most delicate veneer. Since it is available in both 4 speed and variable-speed models, you can cut metal and plastics as well as wood. Removal of the overarm converts it to a saber saw of unlimited capacity.

of approach. See for yourself the simplicity—the genuine case of operation—the basic quality built into this Delta

And the unique Delta design makes it possible for you to cut from front, side, or from any angle

24" Scroll Suw. At home and in the finest cubinet shops there is no better scroll saw. Let your Delta Dealer Demonstrate it for you the's listed in your classified directory under "Tools" or "Machinery"), or send the compon today.

sandths oversize, would surely come here, where the metal was thinnest. At least there would be cylinder-wall distortion. Or maybe, he thought, there had been no freeze-up on this car. Where would that possibility leave him?

Gus looked grim, and then a slow smile formed at his mouth. How many times over the years had he leaned against this bench thinking that he was at the end of his rope? Yet always, somehow, things had worked out. They would this time, too, he decided.

He had water and he had oil, he told himself, in passages. At what places that he hadn't thought of could these two possibly meet? Gus visualized the construction of the engine block. Nothing but a crack, he decided, could put water in the timing-gear case; but the chances of its being there were so shm that the water must be running down there from the valve compartment. Gus moved forward, intent on pulling valve, springs and guides, for a closer inspection, when Barney Overholtz came into the garage.

"Hi, Mr. Wilson," he said, and then his eyes fell on his car, "Gosh!" he exclaimed. "You're working on it yourself."

"Yeah," Gus drawled, "Stevens and Bartlett tell me that your guarantee has expired. They won't do anything."

Gus Puts Bill on the Cuff

Barney's trustful eyes rested on Gus's face. "Golly, Mr. Wilson, I won't be able to pay you for a while, because right now I'm broke. I had to pay Mr. Kleiber, over at Stanfield yesterday, for a new water pump. The left-hand one wobbled."

"Don't worry about it," Gus said, Then, thoughtfully: "You say you put on a new

water pump yesterday?"

Cus found his mind chewing on a startling idea. The water pump had been put on just before water appeared in the craukcase. Was there any connection? Gus recalled that there was a small oil hole drilled from the valve compartment through the block, to meet a similar hole in each water pump. Oil flowed down

these holes to lubricate the water pumps. But this was grabbing at straws, Gus told himself. No one had ever heard of water traveling along a pump shaft, up these oil holes into the valve compartment. He peered into the valve compartment again, but could see nothing. He began to pull the new, left-hand water pump.

"What are you doing now?" Barney

wanted to know,

"Grabbing at straws," Gus told him

grimly.

With the pump off, Gus probed down the oil hole. It ran on a slant from a point within a half-inch of the pump rotor to the pump shaft. But this one had been maccurately drilled. The side of the hole had broken out into the pump water jacket. Pressure from a filled radiator had forced water up the oil hole and into the front end of the valve compartment, where it ran down into the timing-gear case.

Trouble at Long Distance

"Out of a million water pumps," Gus said disgustedly, looking at it, "maybe one was badly drilled like this. And you had to get it, Barney. Goes to show that when a workman does a sloppy job, it can hart someone a schousand miles away."

"I guess," Barney said thoughtfully, "a fellow should always do things real care-

ful, like you do, Mr. Wilson."

"Me?" Gus chuckled. "Why, I'm not careful, I just bumble around, grabbing at straws. This one was awfully thin."

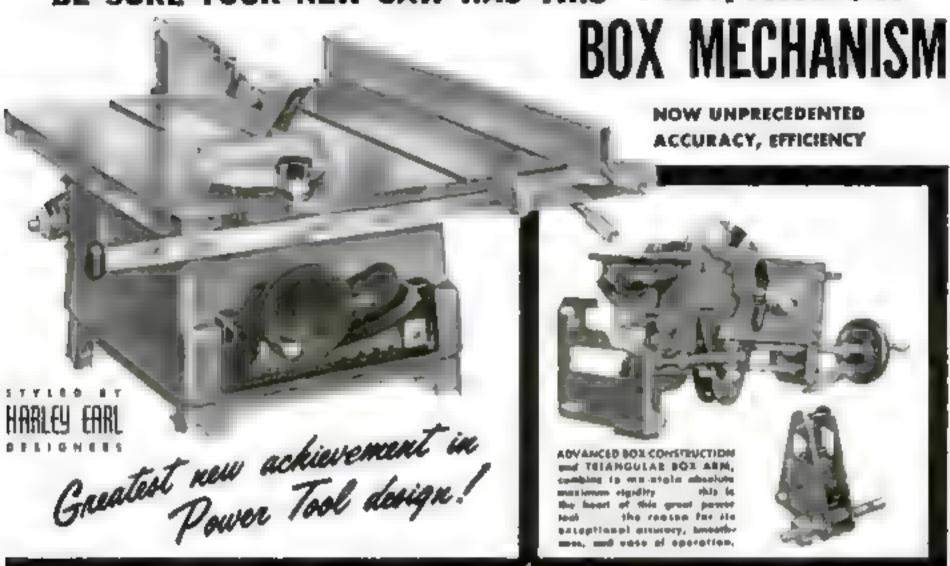

The phone rang again.

"We've been thinking," Stevens said over the wire, "about that car we sold the newspaper boy. You fix it up, Wilson, and bill us..."

"Goes to show, Barney," Gus grinned, "that folks are more honest than we sometimes give them credit for, Stevens won't have to pay, on account of the faulty pump, but that man has a conscience, after all."

NEXT MONTH: Gus backs into Christmas,

BE SURE YOUR NEW SAW HAS THIS TILT/ARBOR

You can DO so much MORE so much BETTER with the GREAT NEW atlas. America's Finest CIRCULAR SAW!

Now, more than ever, your basic home shop tool . . . the great new ATLAS table saw. More accurate, more versatile, safer, and easier to use than any other type of saw . . . hand, power, or combination. Now you can rip longer stock and bigger panels. You can miter, dado, and shape with greater accuracy and smoothness. Tilt/arbor box mechanism gives unprecedented strength, rigidity, and accuracy . . . maintains perfect blade alignment regardless of height, angle or load. Entire mechanism is balanced with motor to give effortless, accurate settings. Many other exclusive features, including dual V-belt drive and grip-form miter gauge. Study the new ATLAS before you invest in any type of saw or combination tool. See your nearest franchised ATLAS dealer, or write for free literature and dealer's name.

There is an ATLAS power tool for every wood and metalworking requirement/ such excels in precision and performance.

SPARK PLUG CARE

When tuning up, be sure to sand-blast electrodes and porcelass on all plugs, to remove metallic oxide coating. Then inspect threads to make sure they are sharp and not rounded off. Rounded threads will not form a good seal with threads of the cylinder head, and will

cause loss of power. Take an old plug, with good sharp threads, and cut a groove through the threads with a 3-cornered file. Use this plug as a die to cut the carbon from the threads in the cylinder head. Then remove plug and clean cylinder head threads with compressed air before installing new plug. Such carbon causes poor plug performance by restricting heat transfer, and can cause a compresgion leak.

IN THREADS

ate under varying conditions. If an engine runs cool, a hotter plug will increase operating efficiency. Such a plug has a longer white insulator and retains heat to burn oil vapor that may get past valve guides, in worn engines. Do not use a hot plug in an engine with good compression. Cool plugs, with very short insulators, should be used only if engine operates under very hot running conditions. Be sure your new plugs have sharp threads to make a good seal in the cylinder head.

DOES YOUR STARTER JAM?

Then get a starter wrench. Remove live were from battery, hot were from starter, and use starter wrench to remove starter from engine. Clean screw drive and pinion with kerosene (not gasoline!) and check pinion spring for possible damage. Lubricate drive screw and pinion with engine oil. Make sure armature shaft is not bent; see that drive spring screws are tight. Then remove any burns from teeth of starter ring gear, as these could cause starter pinion to jam.

VALUABLE MANUAL FREE!

When you re-ring, give your engine the heat-fighting, friction-fighting endurance of the finest in chrome rings—KromeX Ring Sets! Millions of road miles have proved their superiority. Write for the free illustrated manual, "MORE POWER, Less Gas, Less Oil," which may save you a lot of money. Address SealedPower, Dept H-II, Muskegon, Michigan

Sealed Power

'55 Pontiac Is New All Over [Continued from page 133]

engine speeds. Mostly it's a matter of valve timing.

The Pontiac V-8's torque peak occurs at an r.p.m. that, with a Hydra-Matic transmission, becomes a road speed of about 64 miles an hour. That means zip for passing, with less time on the wrong side of the road. The engine's top horse-power, incidentally, is produced at a higher r.p.m.—4,600—than that of any other U.S. passenger-car engine present-ly made.

In refurbishing the entire car, the Pontiac Division has gone by the book of current, accepted design. It reflects everything conservative in the attitudes of its parent corporation, GM. (You could almost swear to the impression that Pontiac dailied over its new engine until the grayheads around the shop satisfied themselves that the overhead-valve V-8 was here to stay!)

Pontiac is Fifth in Sales

The vehicle contains nothing sensational. That's in keeping with its 29year tradition. It's also in keeping with the thinking of a management that for 15 years has sold more cars off the showroom floor than any other company save the Big Three-Chevrolet, Ford and Plymouth-and Buick. Men with a good thing don't take needless risks. When they design cars these days, they unconsciously think back to the early 1930's when Chrysler almost met disaster with a piece of exotic styling. The Chrysler Airflow made sense to everybody but the public. It was a sober, harrowing experience to Detroit,

Like that on all the other cars lately, the hood on the '55 Pontiac is down. The fenders are up. On the Star Chief the driver can see all four. Control knobs are recessed to discourage any intent to suicide by impalement. Despite a narrowing of the car, seats are wider—the stylists simply got rid of air between the sheet metal and the cloth trim.

The fresh-air intake for the passengers

'55 Pontiac Is New All Over

[" numed from page 2a2]

automobiles before World War II—up under the windshield. The postwar anxiety to cut holes under the headlights and duct the exhaust-fouled air garnered there back through the hot engine compartment has run its course and history is repeating itself. (Just like yesteryear's outside spare tire, which, plucked from the luggage compartment, is once again riding modishly on the rear—only at extra cost.)

Tubeless tires are standard on the new Pontiac (see "How to Patch Tubeless

Tires," p. 205).

A roof a full 2% inches lower gives the car a sleeker look. It also, a distinct plus, gives it a lower center of gravity to hug the turns. Yet the drive-shaft tunnel in the floor is no higher. To achieve that, Pontiac borrowed a leaf from Oldsmobile's book and canted the automatic transmission to the side. And, credit the designers, if the road clearance is any lower, it would have to be measured with a nucroscope.

Low Bridge for Tall Drivers

Lower cars necessarily sacrifice entrance room. Pontiac's cutout for the front door had to be shaved at the top by an inch and three-quarters, Six-foot drivers may growl.

But everybody will be pleased with the speedometer. A switch on the Buick barber-pole speedometer (PSM, Feb. '54, p. 146), it tells even a hyperopic driver instantaneously how many knots he is making when the motorcycle cop appears in his rear-vision mirror. He doesn't have to search for the needle on the dial. A disk, appropriately red, creeps across the dial as the accelerator goes down, to lodge against and sharply mark the figures.

Candid Comment

Judging from some of the couples we see, bad accidents can also happen while hunting husbands.—Wall Street Journal

Now the EASY WAY to Send Do-It-Yourself Jobs!

Multi-use tool makes an expension out of an amateur. A wonderful Christman gift for only

Specially designed by experts in the belt-sander field, the Homemaster brings to the Do-It-Yourself user all the know-how and exacting standards of Porter-Cable manufacture . . . at the lowest price ever offered on a tool of this quality. Full 3" width; a faster, easier-to-use tool that's almost fool proof in the hands of the non-professional. Sands, finishes with smooth, straight-grain cuts. No swirls, no gouges. Belts for wood, compositions, metal, ceramics, glass. Excellent for vertical and overhead work.

How Gadgets Save Lives

Many dramatic operations now performed, such as operations on the heart and blood vessels, would not be possible without gadgets. One is the Potts ductus clamp. When it was first developed by Dr. Willis J. Potts of Chicago, professional surgical and medical journals were not interested in publishing a report about it because it was considered just a gadget. Now surgeons use it so much that the manufacturer has difficulty in supplying the demand.

Dr. Potts' clamp squeezes a blood vessel so that blood does not flow through it and spill out, yet without damaging delicate blood-vessel walls. The clamps have 20 very small and perfectly aligned teeth, so evenly placed that there is no undue pressure at any one point and therefore no injury. Another of Dr. Potts' inventions is a knife that opens after it has been inserted in a blood vessel.

Operating on a Shoestring

Shoestrings, white ones, actually are used by surgeons. They fit over the ends of an instrument called the Foss colon clamp to keep the clamping ends from slipping.

Some of the surgeon's stitching is now done by a stapler. It is known as the Von Petz suturing apparatus and is used for the first suture, or stitch, line in stomach dissections. Its jaws open and then close over the cut pieces that are to be stitched and then a special mechanism releases tiny metal staples to hold the edges together

Surgeons can now button up hearts that have holes in them with nylon and Lucite buttons. Each of these buttons is made in halves, which fit together something like a snap hook. One half is pushed through the heart hole by a special instrument and then is pulled back so that teeth on the flat side of the button catch in the tissue of the heart's dividing wall. The other half button is then fastened to the first half

A plastic ball for remedying a heart condition has been devised to help people with a heart valve that does not close. Some 200,-000 persons are living today with this defect. The plastic ball is fastened into the aorta with nylon rings. When the blood is pumped into the big artery, the ball valve moves forward to let the blood through. But if the blood starts to rush back into the heart, the ball valve moves back and closes the opening.

DREMEL MANUFACTURING COMPANY

Dept. 124-L

MACINE, WIS.

Studebaker's New Surprise Package

[Continued from page 182]

The President's performance with the same block is, of course, enhanced by bigger valves, a bigger muffler and a four-barrel carburetor.

The same kind of surgery was done on the Commander engine for '55. With an actual reduction in piston displacement, from 233 to 224 cubic inches, the engine has been boosted from 127 to 140 horsepower.

As for the Champion, a Studebaker engineer who dotes on keeping track of his gas mileage, took a '55 job on a trip the other day. He didn't drive "about 500 miles." He drove, he told me, exactly 514 miles.

"I used 23.7 gallons of gasoline, regular grade," he said. "I had six people in the car, with their higgage. I drove half the distance at 55 to 65 miles an hour and half at 40 miles an hour, and I got 21.7 miles to the gallon."

The Champion engine, an L-head six, remains under-square. Its bore and

stroke were three by four inches for 1954. The new engine's are three by 4%. The longer stroke provides more torque at low speeds.

Engine Block Is Sweet Sixteen

It's a tribute to this efficient little engine that the block is 16 years old. For those with a nostalgic bent, that first 78-horsepower Champion engine, vintage 1939, had a bore and a stroke of three by 3% inches. Piston displacement was 164 cubic inches, compression ratio 6.5-to-1, horsepower output per cubic inch 475. The 101-hp. Champion for '55 has a displacement of 185 cubic inches, compression ratio of 7.5-to-1, and an output per cubic inch of .546

Silent Screams Carve Hardest Materials (Continued from page 100)

School of Dental and Oral Surgery. With his collaboration, and the assistance of other leading dentists and doctors, Cavitron researchers undertook to develop the idea. First step was to adapt the machine tool's principle to a small hand tool, suitable for a dentist's use.

A succession of experimental models resulted. First drilling experiments were on extracted teeth. Later, a dog and a chimpanzee were given samples of pain-

less dentistry.

Painless Drilling—in 50 Seconds

Then, last July, Dr. Oman and a colleague, Dr. Edmund Applebaum, announced the first use of ultrasonic drilling on human patients. Writing in the New York State Dental Journal, they told of filling cavities in four persons' teeth; in a typical case, the drilling took only 50 seconds. All four reported no pain, even in drilling highly sensitive teeth; and the resulting fillings proved satisfactory in every respect.

So new is ultrasonic dentistry that more investigation will precede its general acceptance. But studies to date show only one difference, in effect on the living inner part of a tooth, between conventional and ultrasonic drilling. The new way runs less risk of damaging tooth structure by heat, or by "gross" or

tangible vibration.

The encouraging trials have led to a production model of the ultrasome dental tool, now ready for what its sponsors call further "investigative" use. As this was written, the first 100 were being produced and distributed to selected dental schools, clinics, and clinical investigators in private practice By early next year, 1,000 more should be available. END

"Right here, in the book that came with your car," it says-

Change your Oil Filter every 5,000 miles"

*17 out of 18 leading car makers recommend oil filter changes at least every 5,000 miles, on the average, depending on driving conditions.

Grit and sludge in the oil stream can damage delicate engine parts . . . run up expensive repair bills. Protect your engine by putting in new Purolator Oil Filter Refills regularly.

If you've driven 5,000 miles since changing your oil filter, it's probably clogged. Install a new Purolator Micronic Refill—right away! Costs as little as \$1.60. More car makers specify Purolator than any other oil filter.

"Purclator." "Microsic" Bog. U.S. Pat. Off.

Russians Cram to Beat Us in Science

[Continued from page 107]

cent feature anticipated the use of supersonic and high-frequency radiation for mining, driving vehicles and farm machinery, and the transmission of power.

Speculation is published regarding the use of subterranean heat, storage of energy, extension of human life to 200 years and the breeding of new animals and plants. Treatment of such subjects is serious and analytical. In the same way, stories on rockets to the moon touch only on the practical problems and limitations of space travel.

SF Advances "Struggle for Progress"

Recently the magazine announced a "science-fiction" contest. But readers were advised that their stories must "open before youth the forward march of bold creative thought and the struggle for progress."

But for all this shift to the Government's new line of "a better life," emphasis remains on knowledge as the key to boosting production. The magazine is only one weapon in the campaign for universal technical indoctrination.

A young Russian begins his study of science at the age of seven in a compulsory school. Reading lessons begin with elementary nature studies. At 10, the child spends 12 out of 27 hours weekly on science and related subjects. At 13, over half his time is given to them. This is standard throughout the U.S.S.R.

A universal 10-year course is now being introduced, and the transition is to be completed in all large towns and industrial centers by next year. The change-over is to be nationwide by 1960. Thus at 16 every Russian boy and girl soon will be sweating out six hours a week of math, five of physics, three of chemistry, and one each of astronomy and mechanical drawing.

Some 1% million Russians were enrolled at universities and technical colleges last year. While the total is less than that in the U.S., the number of science students was substantially larger.

Russians Cram to Beat Us in Science

[Continued from page 262]

Available figures indicate that 50 percent of Russia's entire student body, or 750,000, may be science majors. Comparable U.S. figures show a considerably smaller percentage. The number of American graduates has been dropping steadily, while Russia's has been rising.

The Soviet Government is devoting one-eighth of its budget, nominally \$15 billion a year, to education. This goes into student grants, teachers' pay and new buildings. Millions were spent on the "Palace of Science" in Moscow,

which opened last September,

This massive complex includes a 32floor main building, 1,000 laboratories, 148 lecture halls and a 5.750-room dormitory. As everywhere else, each of the 17,000 students is training for a specific job, and he moves into one on graduating. There is no such thing as a liberalarts course in Russia.

Workers Attend Factory Schools

The Soviet drive for skilled manpower doesn't stop with formal schooling. Nearly 8,000,000 workers are now attending spare-time factory schools. Specialized vocational schools are maintained for each branch of industry. About 1% million young workers—a third them girls-are taking two-year courses in machine tools, metallurgy, mining and 250 other trades. Beyond this, a whole network of clubs, libraries and adult-education courses reaches every comer of the country

In a country where 30 years ago only one in four could read or write, the Russians are racing ahead to implement Stalin's call for "a whole new stratum of new engineers and technicians." Behind the Soviet's spectacular industrial advance a huge brain-cramming machine is working overtime.

How Hi-Fi Records Are Made

[Continued from page 127]

If the music is loud, the grooves must be spread as far apart as feasible, to prevent the stylus from cutting across the lands between them. If the music is soft, the grooves can be bunched together.

What the Recording Curve Is

The instant that a cutting stylus begins to record music from a master tape on a master disk, the "recording curve" is in operation.

This is a convenient way of referring to the extent to which technicians amplify the high frequencies (treble notes). and reduce, or attenuate, the volume of the low frequencies on the master tape in the process of transferring them to the master disk. It is done electronically and automatically by the cutter amplifier.

The reason it is done is that low frequencies at natural volume would cause the cutting stylus to fluctuate so violently that it would cut through from one groove to the next. High frequencies at natural volume would cause the stylus to cut such tiny squiggles in the grooves that they would tend to be lost among the granules in the lacquer surface of the disk. Consequently, the lows must be restricted and the highs boosted to prevent distortion when played back.

But if you were to play this master disk exactly as recorded, the lows would be anemic, the highs unbearably shrill. Consequently, hi-fi playback amplifiers are so constructed that they exactly reverse the recording curve, boosting the lows precisely as much as they were originally attenuated, attenuating the highs precisely as much as they were originally boosted. The net result is to make the music sound as nearly as possible as it did in the recording studio.

Their Tallest Tales Are True

[Continued from page 116]

feeling useful. People turn to him to settle arguments. They may also ask him for forecasts. That isn't part of his job, but anyone really interested in the weather can make a good guess about what lies ahead. Furthermore, since he is dealing with his own neighborhood, he may sometimes do better than the official forecaster, who deals with a wide region.

One Saturday morning this last April, Arlington Race's wife wanted to drive 30 miles to do some shopping. She asked what the weather would be. Her husband checked the thermometer: it stood at 32. He looked at the sky: cloudy. The air felt damp, "Better not go," he advised, "We're going to have snow or sleet." Within a few hours, an unseasonable snow and ice storm had made roads all over the county almost impassable.

Amateurs Watch Nature's Signs

Here are some other tips amateur observers have found helpful:

Storms usually are accompanied by warmer weather. So if the temperature rises at a time when it normally falls—late afternoon and night—you can guess there will be rain or snow.

After a storm, the temperature usually drops. If it doesn't, clear weather won't last.

A ring around the moon signifies the approach of wet weather. A storm far to the west has thrown off thin, high-flying clouds and the ice crystals in these clouds, playing tricks with light, form the ring. The closer the storm, the bigger the ring.

On moist summer mornings when there is no high wind to prevent the air from heating, rising and condensing to form the clouds that grow into thunderheads, it is fairly safe to forecast a thunderstorm before the end of the day.

If there's dew or frost on the grass in the morning, look for a clear day. They don't form when the atmosphere is full of moisture and the sky is cloudy—conditions that precede a storm.

Their Tailest Tales Are True

(Continued from page 268)

After several days of cloudy weather in winter, expect snow. It's likely to be a good, deep fall if the temperature holds steady somewhere below freezing, the wind increases, and the snow comes down at the rate of an inch or more an hour.

He Did It the Easy Way

Some years ago a cooperative observer in the Hudson River Valley had acquired such an excellent reputation as a forecaster that the cluef meteorologist at the Albany station decided to investigate. He found his man living on a dirt road well out from town-

Without introducing himself, the meteorologist said he understood the old man forecast the weather so accurately he often beat the official Albany forecast.

"That's right," the farmer told him.

"How do you do it?"

"Just use things everybody knows," the farmer answered, "like dew in the morning and the kind of clouds."

"Nothing else?"

"Well, smoke, of course—in winter when it goes straight up, that means a storm. And chickens and birds oiling their feathers—that means storm, too."

"You're sure that's all?" pressed the

man from Albany.

"Well, there is one thing more," the farmer admitted. "Some darn fool in Albany sends me a weather map and a forecast."

The visitor nodded, hopefully.

"And whatever he says," the farmer went on, "I say just the opposite."

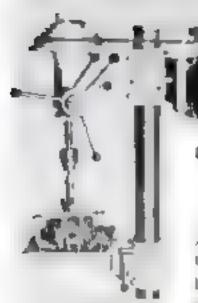

Observers Stick to Their Jobs

About 20 of the cooperative observers have been taking records more than 50 years—and for each year of service, the Weather Bureau estimates, they have given the Government the equivalent of about 12 eight-hour days. Another 75 have served between 40 and 50 years.

The present dean of these volunteers is Henry Crisler, a newspaper publisher in

Their Tailest Tales Are True

[Continued from page 270]

Port Gibson, Miss., who began taking records in 1891. The next year, George W. Richards, now 82 and a farmer at Maple Plain, Minn., opened a station.

John W. Barr, 86, a farmer near Vickery, Ohio, began making observations in 1893. Father Adelhelm Hess, a Benedictine monk, has been keeping the station at Conception, Mo., since 1894 along with being a professor of Latin and

Greek and a country pastor.

Incidentally, Sam Pearson—characterized by the Bayonne, N.J., Times as "a man who has conducted a love affair with the weather for half a century"—has turned his hobby into a business. Upon his retirement recently from a New York bank, he opened an office as a consulting meteorologist and was elected a professional member of the American Meteorological Society.

No Help Wanted

Are there any openings for cooperative observers? Officially, the Weather Bureau says no, it doesn't want to be flooded with applications. Actually, cooperative observers do die, or move away, or even—a few—resign. Also, the network of stations shows some blank spots in thinly populated areas, mostly in the Rocky Mountain States and the South.

But you've got to get to those instruments every day at the same hours, not excepting Sundays. You are subject to telephone calls at any time from some darn fool with some fool question. And all you get out of it is the loan of a shelter that looks something like a beehive; plus two thermometers and a rain gauge-all in all worth maybe \$100. Plus maybe a few dollars now and then as a witness in a court case. Plus the thanks of the darn fools who telephone you. Plus the knowledge that you are helping to build up-for the use of people today and a hundred years from today-a true picture of the American climate.

Opportunity for Men with Automotive Background and Executive Ability

Manufacturer and marketer of nationallyadvertised line of automobile products now expanding operation here and abroad, Distributors needed to warehouse and administrate to growing dealer network. If you have organizational ability and are financially responsible, write for details.

Your inquiry held in confidence; Write: Box. PS-11, 10118 Venice Blvd., Culver City, Calif.

here's why

Look for the Channellock line when you're shopping for hand tools. Channellock pliers offer features that you can't get with other makes. And when you buy a Channellock plier, ask to see the full line — you'll find a style and model to do any job better.

Insure now against Anti-freeze loss and engine overheating

CLEAN OUT RUST AND SCALE WITH NEW IMPROVED DU PONT COOLING SYSTEM CLEANSER

To prevent costly spill-over and boilaway, clean out your radiator before adding anti-freeze. Du Pont Cooling System Cleanser gets rid of rust, scale and grease quickly, safely, surely. No reverse flushing necessary

PREVENT LEAKS AND SEEPAGE WITH DU PONT COOLING SYSTEM SEALER

Your cooling system may seem watertight, yet still have tiny pinholes through which permanent anti-freeze can "creep." To eliminate the threat of this wasteful seepage, sumply pour Du Pont Cooling System Sealer into your radiator. It finds and closes the holes . . . can't clog or harm hose or metal parts.

ASK ABOUT THE COMPLETE BU PONT PRE-ANTI-FREEZE SERVICE

at your service station or car dealer today and assure trouble-free driving this winter.

Make Money Manufacturi Concrete Drain Tile

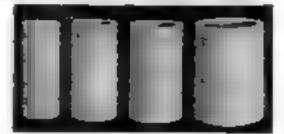

Manufacturers of concrete drain tile are in the driver's seat. Why? Because their basic costs are not burdened by freight, distribution and breakage costs—items which the clay tile people have to pass along. Net results. concrete tile can sell for less, yet show a generous profit,

The market is big-and getting bigger Not only because of increased farm drainage, but also because drain tile are needed in home building, reclamation projects, highway construction, and many other purposes.

Tile made on the Champion are outstanding in quality -dense, strong, uniform and truly round. All sizes up to 12" diameter Easy to make, because the Champion Machine is simple, compact, and requires no shilled labor Business is a low-investment opportunity, with equipment available on terms. Write for catalog.

How Much Did You Learn?

By Stanford E. Taylor and Helen Frackenpohl

Washington Square Reading Center, New York

Now you can sample how much you remember of the useful and interesting information packed into this issue of Popular Science Monthly. Answers to the questions are printed just below the quiz. After each answer is a page reference to the article on which the question was based.

- 1. A disadvantage of the new German "rubber-hub" wheels is that they
 - s, tend to turn eccentrically
 - b. are unsafe at high speeds
 - c. are not as beneficial on old cars
- 2. In ultrasonic machining, in one second the cutting tool delivers
 - a. 1.000 strokes
 - b. 10,000 strokes
 - e. 25,000 strokes
- 3. In 1980-90, Col. Bernt Balchen predicts, no flight will take longer than
 - a. one hour
 - h, two hours
 - c, three hours
- 4. Pontiac has improved its cooling system in '55 models by
 - a, reversing the flow of the water

 - b. using high-velocity water pumps c. adopting a new honeycomb radiator
- 5. There is less surface noise in hi-fi recordings since the use of
 - a. antistatic plastic
 - b. a heated cutting stylus
 - e, reduced groove width

- 6. Amateur weather observers can spot a'storm coming if the temperature
 - a. suddenly drops
 - b. fluctuates
 - c, unexpectedly rises
- 7. An unusual bonus with John R. Linders' house-warming heat pump is its
 - a, ability to cool the house, too
 - b. very low consumption of electricity
 - c, appende for a wide variety of fuels
- The big reason for the '55 Studebaker's flashy performance is its
 - a. high horsepower-to-weight ratio
 - b, low piston travel per mile
 - e. streamlined silhouetto
- 9. In Russia, the percentage of young people majoring in science is about
 - a. 40
 - b. 50
 - c. 60
- 10. The speed of an electric clock is controlled by a
 - a. mechanical governor
 - b. synchronous motor
 - c. electrically energized luning fork.

NEXT MONTH . . .

From Autos to Mobiles

It's a big jump from changing an auto fuse to building a decorative, hanging mobile for your Christmas tree, but you'll be able to do both after reading December Popular Science Monthly.

In one of many articles that will be devoted to automobiles in this fact-packed holiday issue, E. F. Lindsley will tell you how to avoid costly

electrical breakdowns and what to do if trouble

Mobiles? They're art with a capital "A"—the latest thing in decoration for modern homes. But you don't have to be a longhair to like them. An expert will show you how to make one-in the

form of a handsome Christmas tree.

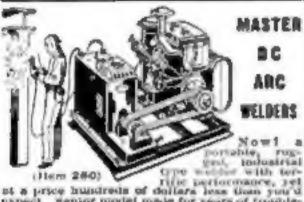

This on a construction of the construction of
